Compact Utility Tractors,

or CUTs, are cute little

cutters! As farming

became more refined so  
did the needs of tractors.

The answer was a smaller,  
more maneuverable and  
fuel-efficient tractor with a  
variety of implements and  
attachments. With this  
focus on special needs,  
attachments became  
available such as plows,  
disc harrows, mower

decks, cultivators,  
spreaders, snowblowers,  
and more. They have  
become a necessary  
utility for farmers,  
orchards, small  
construction jobs, and  
landscaping/maintenance  
for estates, parks and golf  
courses. At the forefront  
of this evolution was the

Farmall Cub and John Deere Model L. Then came the Japanese invasion; a new kind of tractor by companies such as Yanmar and Kubota. These four-wheel drive machines were rugged and tough and used a variety of hydraulically powered attachments. American companies like John Deere, International Harvester, and Massey Ferguson built their own their own four-wheel versions. Today's compact tractors, such as the Kubota BX series, Massey Ferguson's GC series, and

the John Deere 3000, offer an even larger selection of implements for special purposes.

1994–96. In 1995, there was a major turnaround in Suriname’s economic and financial situation following the expansionary fiscal and monetary policies pursued in the first half of the 1990s and the political and economic disruptions of the 1980s. The marked improvement was owing to the restoration of financial discipline, a strengthening of international bauxite prices, and the unification and subsequent stabilization of the exchange rate. The

inflation fell further to less than 1 percent in 1996.

Fundamentals of Weed Science provides an introduction to the basic principles of weed science for undergraduate courses. It discusses several aspects of weed biology and control, and traces the history of herbicide development. The book begins with an introduction to weeds, covering their definition, characteristics, harmful aspects, and the cost of weed control. This is followed chapters on weed classification, the

uses of weeds, weed biology, weed ecology, allelopathy, the significance of plant competition, weed management and control methods, and biological weed control. Later chapters deal with herbicides the most important weed control tools and the ones with the greatest potential for untoward effects. Students of weed science must understand herbicides and the factors governing their use as well as the potential for misuse. These chapters

discuss chemical weed control, the properties and uses of herbicides, factors affecting herbicide performance, herbicide application, herbicide formulation, ecological impact of herbicides, pesticide registration and legislation, weed management systems, and the future of weed science.

The United States has endured eleven recessions since the end of World War II, including the recession of 2007-2009. This book focuses on the performance of the economy and the actions taken during the expansion period before the onset of each recession. It's goal is to help prevent or at least lessen the severity of possible future recessions.

Well-known economics writer Arthur Frumkin analyzes each of the eleven contemporary recessions to determine: What weaknesses appeared in the economy during the twelve months preceding the onset of the recession? What were economic forecasters predicting? What economics policy actions were taken by the Federal Reserve, the president, and Congress? Incorporating extensive real-time data, Frumkin points to persistent failures over the past

sixty years by the Federal Reserve and the president to forecast or to acknowledge the possibility of future recessions. Based on these findings, he concludes with a range of policy recommendations for avoiding or ameliorating future recessions.
