 In this innovative rendition of The Oresteia, the poet, translator, and essayist Anne Carson combines three different visions -- Aischylos' Agamemnon, Sophokles' Elektra, and Euripides' Orestes, giving birth to a wholly new experience of the classic Greek triumvirate of vengeance. Carson's accomplished rendering combines elements of contemporary vernacular with the traditional structures and rhetoric of Greek tragedy, opening up the plays to a modern audience. --from publisher description.

Concepts of Biology is designed for the single-semester introduction to biology course for non-science majors, which for many students is their only college-level science course. As such, this

course represents an important opportunity for students to develop the necessary knowledge, tools, and skills to make informed decisions as they continue with their lives. Rather than being mired down with facts and vocabulary, the typical non-science major student needs information presented in a way that is easy to read and understand. Even more importantly, the content should be meaningful. Students do much better when they understand why biology is relevant to their everyday lives. For these reasons, Concepts of Biology is grounded on an evolutionary basis and includes exciting features that highlight careers in the biological sciences and everyday applications of the concepts at hand. We also strive to show the interconnectedness of topics within this extremely broad discipline. In order to meet the needs of today's instructors and students, we maintain the overall organization and coverage found in most syllabi for this course. A strength of Concepts of Biology is that instructors can customize the book, adapting it to the approach that works best

in their classroom. Concepts of Biology also includes an innovative art program that incorporates critical thinking and clicker questions to help students understand--and apply--key concepts. Campbell Biology in Focus, Loose-Leaf Edition Princeton Review

This is a user-friendly and practical guide for UK practitioners and those managing UK firms on the day-to-day legal issues that arise in the specialist field of partnerships and LLPs. The book is written by three authors: a leading partnership and LLP barrister with many years of litigation experience, a solicitor with specialist expertise in partnership and LLP structures and agreements, and a respected academic in the field. It provides clear and practical guidance on the main issues that arise time and again in UK partnerships and LLPs. While there are many important differences between traditional partnerships and LLPs, the practical issues that they face are often similar, and

the book therefore tackle both areas. The focus is mainly on those areas that regularly cause difficulty in firms (be they traditional partnership or LLP). Subjects covered include: the legal nature and characteristics of partnerships and LLPs * factors influencing choice of legal entity * the essential elements of partnership and members' agreements * management structures including management boards and partnership councils * conduct of meetings * partnership/LLP property and profits and losses * accounts, taxation, and audit * partner and member retirements and expulsions * duties of partners and members * Equality Act implications * suspension and garden leave * personal liability issues * dissolution and winding-up * goodwill * disputes: mediation, arbitration, and court proceedings * mergers, acquisitions, and conversions.

Instructors consistently ask for a textbook that helps students understand the relationships between the main concepts of biology, so they are not learning

facts about biology in isolation. Mader's *Concepts of Biology* was developed to fill this void. Organized around the main themes of biology, *Concepts of Biology* guides students to think conceptually about biology and the world around them. Just as the levels of biological organization flow from one level to the next, themes and topics in *Concepts of Biology* are tied to one another throughout the chapter, and between the chapters and parts. Combined with Dr. Mader's hallmark writing style, exceptional art program, and pedagogical framework, difficult concepts become easier to understand and visualize, allowing students to focus on understanding how the concepts are related.
