Scrum QuickStart Guide... Differing greatly from the traditional "waterfall" or "relay" approach to project management methodology, Scrum emphasizes the importance of a cross-functional team that pushes forward together to a collective goal - the project success. Implementing such tactics as "Daily Scrums" in which all members of the team are held accountable for their

accomplishments, current tasks and potential obstacles, Scrum attempts to create a real "team" amongst all members where all individuals most move forward together, as occurs within a Scrum on the Rugby Field from which the term was adopted. The holistic approach taken by Scrum not only embraces the importance of progressing as a team, it also raises several important question that highlight potential inefficiencies within an organization, specifically related to resource allocation, accountability and task management. Not to be overlooked, the approach taken even from the smallest projects within an organization can ultimately define the overall success. Here Is A Preview Of What You'll Learn... completed all around the world. A far more progressive approach than the  
traditional Waterfall methodology, Agile Project Management allows  
organizations to benefit from the progress of their project in real time  
while having the ability to alter the final outcomes. In the more traditional,  
Waterfall approach to project management, organizations only see the  
benefits of a project at the full time of completion or implementation stage.  
Through this waterfall methodology, projects that last over an extended

period of time stigmatize an adjusted scope or schedule, even though the organizations that are completing them are constantly changing. It is, for this reason, amongst many other, that the Agile Project Management style has become so widely implemented in organizations spanning several different industries. Agile Project Management allows organizations to see benefits of their efforts in real time by dividing the project into smaller, more quickly implemented pieces. This approach, which contrasts the traditional methodology of implementing the entire project through "phases," allows for stakeholders to adjust goals and resources in a more fluid manner than would be possible through the Waterfall methodology.
