This book represents a head-to-toe guide for clinicians who are interested in applying real-time near infrared (NIR) imaging for their patients. Expert surgeons

from around the globe share their experience with NIR imaging, most commonly performed using indocyanine green (ICG) fluorescence. The chapters are structured to include a brief background, indications for use, followed by a technical description of the procedure. Each chapter is also accompanied by video examples

and detailed information about necessary equipment, drug dosing, and alternative techniques. A pitfalls section serves as a “lessons learned” segment to bookend each chapter. Authors represent a comprehensive list of surgical subspecialties ranging from neurosurgery to plastic surgery. While it is not meant to serve as an exhaustive summary of ICG use in surgery, the goal is to highlight the successful use of this technology in a number of settings. As the technology and applications continue to expand, Video Atlas of Intraoperative Applications of Near Infrared Fluorescence Imaging serves as a foundation upon which to build.

This Atlas summarizes current surgical strategy for cerebral revascularization in the treatment of complex neurovascular diseases. It focuses on complex intracranial aneurysms, which are mostly large/giant, irregular and short of enough collateral compensation. In the first part, it starts from the extracranial-intracranial (EC-IC) bypass strategy. For the complex middle cerebral artery aneurysms, the types of EC-IC bypass are determined

based on the angioarchitecture. Furthermore, various intracranial-intracranial (IC-IC) bypasses are introduced, with the advantage of no need for graft vessel harvesting and preferable matching of donor and receipt arteries. This Atlas provides useful knowledge and cases about this basic and indispensable skill for neurosurgeons.

Compact Clinical Guide to Acute Pain Management Lippincott Williams & Wilkins Provides coverage of the pathogenesis, clinical, morphologic, molecular and investigational aspects of a full range of blood disorders seen in daily practice The revised fifth edition of this renowned atlas presents readers with a comprehensive, visual guide to clinical hematology, featuring 2700 full-color photographs and figures depicting the spectrum of hematological diseases. Ranging from photographs of the clinical manifestations and key microscopic findings to diagrams of the molecular aspects of these diseases, the book provides up-to-date information of the blood diseases that clinicians encounter every day. Color Atlas of Clinical Hematology: Molecular and Cellular Basis of Disease offers the reader

an understanding of normal cell machinery, and of the molecular basis for such processes as DNA and cell replication, RNA species, trafficking and splicing, protein synthesis, transcription factors, growth factor signal transduction, epigenetics, cell differentiation, autophagy, and apoptosis. The text goes on to explore how these processes are disturbed in the various diseases of the bone marrow, blood, and lymphoid systems. Helps solve difficult diagnostic challenges and covers complex principles using highly illustrative, full-color images Explores all aspects of benign and malignant hematology, including blood transfusion and coagulation with extensive coverage of the pathogenesis of common clinical entities Provides a quick and easy reference of key diagnostic issues in a comprehensive yet concise format Includes and illustrates the WHO Classification of Hematologic Malignancies Illustrates the new knowledge of the molecular basis of inherited and acquired blood diseases Color Atlas of Clinical Hematology: Molecular and Cellular Basis of Disease is the must-have resource for both trainee and practising hematologists,

and for every department of hematology. "Substantially updated and now multi-authored so that all aspects of haematology are equally covered, including the newest developments in molecular biology and genomic sequencing" "There is a surplus of invention in communicating complex problems here and an admirable effort to keep the reader totally up-to-date"

This groundbreaking new guide was written specifically for therapists, psychologists, and clinicians to assist clients suffering from chronic stress/PTSD by implementing an innovative, salutogenic (strengths - and resource-based) philosophy into their daily therapy work. First, the book identifies four active ingredients that should be present in all trauma treatment--followed by the Empowerment and Resilience Structure treatment manual, which pinpoints the critical components and baseline standards for the field of trauma counseling that are not model dependent, and are designed for immediate application. Trauma Competency for the 21st Century is inspired by the salutogenic

approach to treatment: working with wellness factors (those that support health and well-being) rather than those that cause disease. The goal is to empower the client through a renewed belief in their own abilities, capacities, and resiliencies, and to instill a genuine hope for a future marked by healing and fulfillment.
