 "Fundamentals of Early Childhood Education provides a brief, reader-friendly introduction to the field of early childhood education. Fundamentals presents chapter features on early childhood programs, professionals in practice, diversity strategies, technology issues, and ethical decision making. Separate chapters on infants and toddlers, preschoolers, kindergartners, and primary-grade children explore each age group's unique developmental and educational needs. Fundamentals' emphasis on professionalism throughout keeps the focus on meeting the needs of all children and providing up-to-date information and strategies to develop competent, informed early childhood professionals."--BOOK JACKET.

On September 14, 2017, the Roundtable on Population Health Improvement of the National Academies of Sciences,

Engineering, and Medicine convened a workshop to explore the intersection of health and early childhood care and education, two key social determinants of health. This workshop follows a 2014 roundtable workshop that considered the interface between the education and health sectors broadly, from research and metrics to cross-sectoral partnerships and financing. The 2017 workshop continued that discussion, with a deeper focus on early childhood (birth through age 5) as a critical period in human development and an important opportunity for educational and related interventions. This publication summarizes the presentations and discussions from the 2017 workshop.

 This book challenges received wisdom and the tendency to reduce philosophical issues of value to purely technical issues of measurement and management.

This is the eBook of the printed book and may not include any media, website access codes, or print supplements that may come packaged with the bound book. A leading text for Introduction to Early Childhood Education courses keeps students on the cutting edge of early childhood teaching practice and professionalism. George Morrison's *Early Childhood Education Today* presents current, research-based information on providing high-quality early education to all children so that they can be successful in school and in life. The new edition retains the engaging style that has made the book so popular and provides practical examples of authentic teaching practices used by master teachers. Its strong coverage of development in the age/grade-specific chapters, emphasis on diversity, and coverage of contemporary topics and issues make this text stand apart from other early childhood education texts. The Fourteenth Edition integrates 14 themes that are critical to the field today: the importance of all children's language and literacy development and competence; teaching children who may need help with English language learning; teaching in increasingly diverse classrooms; applying developmentally appropriate practices; closing the achievement gap; integrating special education and early childhood education services; teaching in inclusive classrooms; closing school readiness gaps; the expanding role of preschool education; meeting the challenges of teacher accountability; integrating STEAM subjects into the curriculum; providing for children's mental health; using technology to support learners; and developing as a professional. *Early Childhood Care and Education in Canada* Sarup & Sons In *Informed Advocacy in Early Childhood Care and Education: Making a Difference for Young Children and Families* the author outlines six contexts for advocacy in the field of early childhood education -- individual child and family, advocacy for the profession, program-based advocacy, private-sector advocacy, political activism, and advocacy in the global arena. This practical guide describes the critical need for advocacy in the field of early care and extols the ethical responsibilities of all early child

educators, as outlined in the Code of Ethical Conduct (NAEYC 2005). Organized into three parts, the text begins with advocacy in the field of early childhood education, discusses how to develop an advocacy agenda, and concludes with becoming an advocate for life. Additionally, a wide range of advocacy activities are addressed, including: choosing effective strategies, networking, advocating for program changes from within, navigating and being effective in the political process, working with the private sector to bring about positive changes for children, developing and managing an advocacy agenda, and working with the media.

Early childhood care and education (ECCE) settings offer an opportunity to provide children with a solid beginning in all areas of their development. The quality and efficacy of these settings depend largely on the individuals within the ECCE workforce. Policy makers need a complete picture of ECCE teachers and caregivers in order to tackle the persistent challenges facing this workforce. The IOM and the National Research Council hosted a workshop to describe the ECCE workforce and outline its parameters. Speakers explored issues in defining and describing the workforce, the marketplace of ECCE, the effects of the workforce on children, the contextual factors that shape the workforce, and opportunities for strengthening ECCE as a profession.

*Early Childhood Education and Care* National Academies Press High-quality early care and education for children from birth to kindergarten entry is critical to positive child development and has the potential to generate economic returns, which benefit not only children and their families but society at large. Despite the great promise of early care and education, it has been financed in such a way that high-quality early care and education have only been available to a fraction of the families needing and desiring it and does little to further develop the early-care-and-education (ECE) workforce. It is neither sustainable nor adequate to provide the quality of care and learning that children and families need—a shortfall that further perpetuates and drives inequality. *Transforming the Financing of Early Care and Education* outlines a framework for a funding strategy that will provide reliable, accessible high-quality early care and education for young children from birth to kindergarten entry, including a highly qualified and adequately compensated workforce that is consistent with the vision outlined in the 2015 report, *Transforming the Workforce for Children Birth Through Age 8: A Unifying Foundation*. The recommendations of this report are based on essential features of child development and early learning, and on principles for high-quality professional practice at the levels of individual practitioners, practice environments, leadership, systems, policies, and resource allocation.

The general public often views early childhood education as either simply "babysitting" or as preparation for later learning. Of course, both viewpoints are simplistic. Deep understanding of child development, best educational practices based on development, emergent curriculum, cultural competence and applications of family systems are necessary for high-quality early education. Highly effective early childhood education is rare in that it requires collaboration and transitions among a variety of systems for children from birth through eight years of age. The *SAGE Encyclopedia of Contemporary Early Childhood Education* presents in three comprehensive volumes advanced research, accurate practical applications of research, historical foundations and key facts from the field of contemporary early childhood education. Through approximately 425 entries, this work includes all areas of child development – physical, cognitive, language, social, emotional, aesthetic – as well as comprehensive review of best educational practices with young children, effective preparation for early childhood professionals and policy making practices, and addresses such questions as: · How is the field of early childhood education defined? · What are the roots of this field of study? · How is the history of early childhood education similar to yet different from the study of public education? · What are the major influences on understandings of best practices in early childhood education?

Children are already learning at birth, and they develop and learn at a rapid pace in their early years. This provides a critical foundation for lifelong progress, and the adults who provide for the care and the education of young children bear a great responsibility for their health, development, and learning. Despite the fact that they share the same objective - to nurture young children and secure their future success - the various practitioners who contribute to the care and the education of children from birth through age 8 are not acknowledged as a workforce unified by the common knowledge and competencies needed to do their jobs well. *Transforming the Workforce for*

*Children Birth Through Age 8* explores the science of child development, particularly looking at implications for the professionals who work with children. This report examines the current capacities and practices of the workforce, the settings in which they work, the policies and infrastructure that set qualifications and provide professional learning, and the government agencies and other funders who support and oversee these systems. This book then makes recommendations to improve the quality of professional practice and the practice environment for care and education professionals. These detailed recommendations create a blueprint for action that builds on a unifying foundation of child development and early learning, shared knowledge and competencies for care and education professionals, and principles for effective professional learning. Young children thrive and learn best when they have secure, positive relationships with adults who are knowledgeable about how to support their development and learning and are responsive to their individual progress. *Transforming the Workforce for Children Birth Through Age 8* offers guidance on system changes to improve the quality of professional practice, specific actions to improve professional learning systems and workforce development, and research to continue to build the knowledge base in ways that will directly advance and inform future actions. The recommendations of this book provide an opportunity to improve the quality of the care and the education that children receive, and ultimately improve outcomes for children.

Child care environments have received extensive research attention by those interested in understanding how participating in nonparental child care might influence the children's development and learning. Throughout the United States (US Census Bureau, 2011) and Europe (Organization for Economic Co-operation and Development, 2006) a large number of young children are cared for outside of the home by non-parental adults. Young children's nonparental care is commonly referred to as "child care," and is provided to children whose ages range from birth to 12 years of age. The provision of child care services has become an increasingly important part of early childhood education. In fact, the United Nations Children's Fund (2019) states that a large majority of children worldwide spend at least some of their week in child care, such arrangements include center care, family child care, in-home child care, relative child care, and supplemental child care. Child care researchers have been conducting studies to understand how participating in nonparental child care might influence the children's development and learning outcomes. There are more than enough child care studies to make numerous major inferences. For example, research outcomes show that child care quality seems to be more influential than either the kind of child care or age of admission in determining the children's development and learning. The adults' child care affects the quality in child care. In the environment adults who are caring for the children have the opportunity to effectively assume both nurturing and instructional roles to help young children cultivate their social and cognitive abilities. The teachers' effectiveness is related to their individual characteristics, such as formal education, specialized training, and the classroom environment. However, the majority of the studies show that both family and quality of child care have the most significant effects on the children's development and learning. Therefore, the concept of child care has heavily influenced modern views. Researchers, scholars, and educators are beginning to understand the current foundations based on theoretical frameworks that contribute to the purposes of the child care in the United States and Europe. The contents of the

child care volume reflect the major shifts in the views of these early childhood researchers, scholars, and educators in relation to research outcomes on child care, its historical roots, the role of child care in early childhood education, and its relationship to theory, research, and practice.

Rethinking Early Childhood Education is alive with the conviction that teaching young children involves values and vision. This anthology collects inspiring stories about social justice teaching with young children. Included here is outstanding writing from childcare teachers, early-grade public school teachers, scholars, and parents. Early childhood is when we develop our core dispositions -- the habits of thinking that shape how we live. This book shows how educators can nurture empathy, an ecological consciousness, curiosity, collaboration, and activism in young children. It invites readers to rethink early childhood education, reminding them that it is inseparable from social justice and ecological education. An outstanding resource for childcare providers, early-grade teachers, as well as teacher education and staff development programs.

"This volume is exemplary in synthesizing research and condensing pertinent data on early childhood services both for practitioners and policymakers." -Charles Bruner, Director, Child and Family Policy Center "Any school district struggling with low test scores, high mobility, and/or high poverty should consider the benefits of early intervention-and read this book." -Mathieu Aubuchon, Preschool Coordinator The Early Childhood Center at

Gregory Hill, Westminster, CO Your research-based reference for developing quality early educational experiences! School and district administrators, as well as policymakers, are increasingly recognizing that early education and intervention services for young children have a direct and positive impact on later school performance and quality of life. But which programs and services should be operated and funded? To answer that question, this book highlights the principles that characterize effective practices and programs for children ages 3-8. Written specifically for busy administrators, *Evidence-Based Practices and Programs for Early Childhood Care and Education* synthesizes what works, what doesn't, and what we still need to know based on the reviews of scientific literature by an expert panel of contributors. Key topics include: Definition and assessment of readiness of children and schools Early intervention for children in poverty, English language learners, and students with special needs Publicly funded, home-based, school-age, and out-of-schooltime programs The future of personnel preparation and professional development The result is a highly readable presentation of the evidence needed to make informed practice, program, and policy decisions in early care and education.

Early childhood education programs are expected to provide exemplary care for all children—poor and affluent, children of color and White children—while also adapting care to include children's families and cultures. These two sets of expectations are often difficult for teachers and programs to meet. In this book, Carollee Howes shows how high-quality programs successfully adapt child development guidelines within cultural contexts, and why quality needs to be and can be measured in culturally specific ways. This important book: Closely examines ECE programs considered exemplary for low-income children of color. Shows how directors and teachers successfully use practices derived from their cultural communities to implement universal standards of child care. Identifies the commonalities in good early childhood programs that are shared across class, race, and ethnic communities. Offers best practices based on extensive assessments, interviews, and observations. "Will have immediate relevance for policy debates, for understanding the mechanisms of program effects, and for educators who wish to deepen their knowledge of practice." —Robert C. Pianta, University of Virginia "I urge all higher education faculty, in-service teacher trainers, accreditation observers, researchers, text-book writers and policymakers of standards to read this book." —From the Foreword by Louise Derman-Sparks
