Twenty-one philosophers join forces to investigate the implications of the Jurassic Park franchise for our lives, our values, and our future. Human beings live and thrive by modifying nature, but when do the risks of changing nature outweigh the likely benefits? If it's true that "Life will find a way," should we view any modified or newly reconstituted life as a hazard? The new scientific information we could gain by bringing back T. Rex or other dinosaurs is immense, including greater understanding of biology leading to immeasurable medical benefits, but should we choose to let sleeping dinosaurs lie? And if we do bring them back by reconstituting them from ancient DNA, are they really what they were, or is

something missing? If life will find a way, then why isn't the Dodo still around? How close are we, as a matter of fact, to achieving Jurassic Park? Are we really likely to see reconstituted dinosaurs or other ancient species in the near future? How do the different forces—human curiosity, profitability, and philanthropy—interact to determine what actually happens in such cases? What moral standards should be applied to those who try to bring back lost worlds? If velociraptors could talk, what would they tell us? The idea of bringing back the dead and the powerful is not limited to biological species. It also applies to bringing back old gods, old philosophies, old institutions, and old myths. If revived and once again let loose to walk the Earth, these too may turn out to be more dangerous than we bargained for.

Wherever the cutting edge of science goes, Michael Crichton is there. From dinosaur cloning to global warming, nanotechnology to time travel, animal behavior to human genetics, Crichton always takes us to the cutting edge of science and then pushes the envelope. The Science of Michael Crichton examines the amazing inventions of Crichton's books and lifts up the hood, revealing the science underneath. In intelligent and well-thought essays, scholars and experts decide what Crichton gets right and what he gets wrong. They examine which Crichton imaginings are feasible and which are just plain impossible. Scenarios examined include whether dinosaurs can be cloned, if nanotechnological particles can evolve intelligence, and if we can go back in time.
