FABRICATE is an international peer reviewed conference that takes place every three years with a supporting publication on the theme of Digital Fabrication. Discussing the progressive integration of digital design with manufacturing processes, and its impact on design and making in the 21st century, FABRICATE brings together pioneers in design and making within architecture, construction, engineering, manufacturing, materials technology and computation. Discussion on key themes includes: how digital fabrication technologies are enabling new creative and construction opportunities from component to building scales, the difficult gap that exists between digital modelling and its realisation, material performance and manipulation, off-site and on-site construction, interdisciplinary education, economic and sustainable contexts. FABRICATE features cutting-edge built work from both academia and practice, making it a unique event that attracts delegates from all over the world. FABRICATE 2011, 2014 and 2017 are now all available to download free from UCL Press.

**Ship & Boat International** Birkhäuser

Written from the viewpoint of the working designer, this textbook describes each material's characteristics and teaches students how to evaluate, select and specify materials.

Materials and the myriad technologies that have been developed to manipulate them are of essential relevance to product designers, architects, artists and stylists, as they represent the starting point for every product and every architectural work. The book is an encyclopaedic compendium of around 1,000 terms in this field, from aerogel to marble to zirconium. It features traditional and frequently used materials, as well as new and unexpected ones. Their respective advantages and disadvantages are precisely described. In addition, terms related to production processes, such as upcycling or tanning, or that describe the properties of materials or are closely related to the topic have also been included.

**Materials Encyclopedia for Creatives** Springer Science & Business Media

"Building Materials for the Environmentally Hypersensitive was prepared to help individuals and builders select building materials that have minimal negative effects on the health of environmentally hypersensitive occupants. The materials included are those typically used in residential construction in cold climates. Two kinds of information were used in evaluating the materials: 1) known or published information about the products; and 2) the experiences of hypersensitive individuals with these materials. The responses of hypersensitive individuals to the building materials were used as an indicator of how these materials affect the environmentally hypersensitive"--

**Handbook of Adhesives** John Wiley & Sons

This key reference will serve as the most comprehensive source for identifying and locating products in the international chemical marketplace. It has been written for the chemists, materials scientists, end-product formulators, industrial application specialists and scientists working in associated fields.

**Popular Science** A&C Black

The Handbook of Adhesives and Sealants, 2nd Edition is primarily written to assist all those who have a permanent or temporary interest in adhesives and sealants. For those new to the field, the Handbook will provide a fundamental knowledge base of materials and processes as well as reasons why

they work and (more importantly) why they don't work. To the more experienced reader, the breadth and thoroughness of the Handbook will provide a way to reduce time spent on trial and error development or on searching for the optimal recommended process. For the academic, the Handbook will connect the important theories regarding surface science, polymeric materials, and mechanics with practical products and applications of commercial significance. This edition includes major new sections on radiation curable adhesive, biological and naturally occurring adhesives, inorganic adhesives, role of bulk properties of the adhesive, non-destructive testing, and industrial application methods. A completely new chapter is devoted to adhesives used in various industries such as automobile, electrical / electronic, construction, packaging, aerospace, household do-it-yourself, and medical.

**Bathroom Design** McGraw Hill Professional

This book offers designers several essential tools to work successfully with architects, contractors, manufacturers, and clients: A comprehensive presentation of finishing materials for the interior of a building, whether residential or commercial Key information on environmentally responsible and sustainable products Careful presentation of correct installation procedures and product maintenance Interesting historical background on the development of key materials A glossary of useful terms at the end of the chapter Appendices that list manufacturers and associations that sell or represent the products covered in the text In short, this text provides interior design students with the vital knowledge that they need to pass the National Council for Interior Design Qualification (NCIDQ) exam.
