By the time Donald
Rothberg was in his early
twenties, he knew he had
two vocations. He wanted
to dedicate himself to
justice and social change,
and he wanted to commit

himself to exploring the
depths of human
consciousness-to an
awakening of our deeper
spiritual nature. It has
been his life's work, as an
activist, organizer, writer,
and teacher, to bring
these two paths together
and to reveal how deeply
they require one another.
The Engaged Spiritual Life
is the fruit of this work.
Skillfully weaving together

basic spiritual teachings,
real-life examples, social
context, and exercises,
Rothberg provides a clear,
thorough, and compelling
guide for those interested
in connecting inner and
outer transformation. At
the core of the book are
ten spiritual principles and
associated practices that
will enable readers to
engage all the parts of
their lives-whether

personal, interpersonal, or political-into a seamless whole.

The Essential Ken Wilber

Shambhala Publications

The goal of an "integral psychology" is to honor and embrace every legitimate aspect of human consciousness under one roof. This book presents one of the first truly integrative models of consciousness, psychology, and therapy. Drawing on hundreds of sources—Eastern and Western, ancient and modern—Wilber creates a psychological model that

includes waves of development, streams of development, states of consciousness, and the self, and follows the course of each from subconscious to self-conscious to superconscious. Included in the book are charts correlating over a hundred psychological and spiritual schools from around the world, including Kabbalah, Vedanta, Plotinus, Teresa of Ávila, Aurobindo, Theosophy, and modern theorists such as Jean Piaget, Erik Erikson, Jane

Loevinger, Lawrence Kohlberg, Carol Gilligan, Erich Neumann, and Jean Gebser. Integral Psychology is Wilber's most ambitious psychological system to date and is already being called a landmark study in human development.

"A group of remarkably penetrating, frank, and expert scientists, technowizards, activists, and writers raise provocative questions about what is

gained and what is lost in a world enthralled by technology in this wonderfully soulful forum on life in the 'Wired World.' " -BOOKLIST
Biotechnology, Cloning, Robotics, Nanotechnology... At a time when scientific and technological breakthroughs keep our eyes focused on the latest software upgrades or the newest cell-phone wizardry, a group of today's most innovative thinkers are looking beyond the horizon to explore both the promise

and the peril of our technological future. Human ingenuity has granted us a world of unprecedented personal power -- enabling us to communicate instantaneously with anyone anywhere on the globe, to transport ourselves in both real and virtual worlds to distant places with ease, to fill our bellies with engineered commodities once available to only a privileged elite. Through our technologies, we have sought to free ourselves from the shackles of

nature and become its master. Yet science and technology continually transform our experience and society in ways that often seem to be beyond our control. Today, different areas of research and innovation are advancing synergistically, multiplying the rate and magnitude of technological and societal change, with consequences that no one can predict. Living with the Genie explores the origins, nature, and meaning of such change, and our capacity to

govern it. As the power of technology continues to accelerate, who, this book asks, will be the master of whom? In *Living with the Genie*, leading writers and thinkers come together to confront this question from many perspectives, including: Richard Powers's whimsical investigation of the limits of artificial intelligence; Philip Kitcher's confrontation of the moral implications of science; Richard Rhodes's exploration of the role of technology in reducing violence; Shiv

Visvanathan's analysis of technology's genocidal potential; Lori Andrews's insights into the quest for human genetic enhancement; Alan Lightman's reflections on how technology changes the experience of our humanness. These and ten other provocative essays open the door to a new dialogue on how, in the quest for human mastery, technology may be changing what it means to be human, in ways we scarcely comprehend. Here is a concise, comprehensive overview of Wilber's revolutionary thought and its application in today's world. In *A Theory of Everything*, Wilber uses clear, nontechnical language to present complex, cutting-edge theories that integrate the realms of body, mind, soul, and spirit. He then demonstrates how these theories and models can be applied to real-world problems in areas such as politics, medicine,

business, education, and the environment. Wilber also discusses daily practices that readers take up in order to apply this integrative vision to their own everyday lives.

Here is a collection of writings that bridges the gap between science and religion. Quantum Questions collects the mystical writings of each of the major physicists involved in the discovery of quantum physics and relativity, including Albert Einstein, Werner

Heisenberg, and Max Planck. The selections are written in nontechnical language and will be of interest to scientists and nonscientists alike.

An Integral Vision for Business, Politics, Science and Spirituality Island Press

Wilber traces human development from infancy into adulthood and beyond, into those states described by mystics and spiritual adepts. The spiritual evolution of such extraordinary individuals as the Buddha and Jesus hints at the direction

human beings will take in their continuing growth toward transcendence.

Transformations of Consciousness SAGE Publications Pvt. Limited

An eye-opening introduction to the complex world of esoteric Christianity—perfect for the general reader This guide to mystical and esoteric Christianity speaks from a nonsectarian point of view, unearthing insights from the whole of the Christian tradition, orthodox and heretical, famous and obscure. The

esoteric tradition has traditionally searched for meanings that would yield a deeper inner knowledge of the divine. While traditional Christianity draws a timeline from Adam's Fall to the Day of Judgment, the esoteric often sees time as folding in on itself, bringing every point to the here and now. While the Church fought bitterly over dogma, the esoteric borrowed freely from other traditions—Kabbalah, astrology, and alchemy—in their search for metaphors of inner

truth. Rather than basing his book around exponents of esoteric doctrine, scholar Richard Smoley concentrates on the questions that are of interest to every searching Christian. How can one attain direct spiritual experience? What does "the Fall" really tell us about coming to terms with the world we live in? Can we find salvation in everyday life? How can we ascend, spiritually, through the various levels of existence? What was Christ's true message to

humankind? From the Gospel of Thomas to A Course in Miracles, from the Jesus Prayer to alchemy and Tarot, from Origen to Dante to Jung, Richard Smoley sheds the light of an alternative Christianity on these issues and more.

Conventional and Contemplative Perspectives on Development

Shambhala Publications
 A brilliant book by Nobel Prize winner Eric R. Kandel, *The Age of Insight* takes us to Vienna 1900,

where leaders in science, medicine, and art began a revolution that changed forever how we think about the human mind—our conscious and unconscious thoughts and emotions—and how mind and brain relate to art. At the turn of the century, Vienna was the cultural capital of Europe. Artists and scientists met in glittering salons, where they freely exchanged ideas that led to revolutionary breakthroughs in psychology, brain science, literature, and art. Kandel

takes us into the world of Vienna to trace, in rich and rewarding detail, the ideas and advances made then, and their enduring influence today. The Vienna School of Medicine led the way with its realization that truth lies hidden beneath the surface. That principle infused Viennese culture and strongly influenced the other pioneers of Vienna 1900. Sigmund Freud shocked the world with his insights into how our everyday unconscious aggressive and erotic desires are repressed and

disguised in symbols, dreams, and behavior. Arthur Schnitzler revealed women's unconscious sexuality in his novels through his innovative use of the interior monologue. Gustav Klimt, Oscar Kokoschka, and Egon Schiele created startlingly evocative and honest portraits that expressed unconscious lust, desire, anxiety, and the fear of death. Kandel tells the story of how these pioneers—Freud, Schnitzler, Klimt, Kokoschka, and Schiele—inspired by the

Vienna School of Medicine, in turn influenced the founders of the Vienna School of Art History to ask pivotal questions such as What does the viewer bring to a work of art? How does the beholder respond to it? These questions prompted new and ongoing discoveries in psychology and brain biology, leading to revelations about how we see and perceive, how we think and feel, and how we respond to and create works of art. Kandel, one of the leading scientific

thinkers of our time, places these five innovators in the context of today's cutting-edge science and gives us a new understanding of the modernist art of Klimt, Kokoschka, and Schiele, as well as the school of thought of Freud and Schnitzler. Reinvigorating the intellectual enquiry that began in Vienna 1900, *The Age of Insight* is a wonderfully written, superbly researched, and beautifully illustrated book that also provides a foundation for future work in neuroscience and the

humanities. It is an extraordinary book from an international leader in neuroscience and intellectual history.

The Spectrum of Consciousness Quest Books

Consciousness is an active area of both philosophical debates and scientific research. *Consciousness Quest*, rather than covering the broad spectrum of consciousness spread over multiple scientific disciplines, refocuses the quest for consciousness on a specific area where

Eastern contemplative traditions, mostly in Hindu and Buddhist theories of mind, meet Western empirical research. This book is an introduction to current scientific thinking and research on consciousness and at the same time acquaints readers with the spectrum of classical and modern philosophical notions on consciousness

The Zen of Listening

Quest Books

An argument for a Copernican revolution in our consideration of mental features—a shift in which the world-brain problem supersedes the mind-body problem. Philosophers have long debated the mind-body problem—whether to attribute such mental features as consciousness

to mind or to body. Meanwhile, neuroscientists search for empirical answers, seeking neural correlates for consciousness, self, and free will. In this book, Georg Northoff does not propose new solutions to the mind-body problem; instead, he questions the problem itself, arguing that it is an empirically, ontologically, and conceptually implausible way to address the existence and reality of mental features. We are better off, he contends, by addressing consciousness

and other mental features in terms of the relationship between world and brain; philosophers should consider the world-brain problem rather than the mind-body problem. This calls for a Copernican shift in vantage point—from within the mind or brain to beyond the brain—in our consideration of mental features. Northoff, a neuroscientist, psychiatrist, and philosopher, explains that empirical evidence suggests that the brain's spontaneous activity and

its spatiotemporal structure are central to aligning and integrating the brain within the world. This spatiotemporal structure allows the brain to extend beyond itself into body and world, creating the “world-brain relation” that is central to mental features. Northoff makes his argument in empirical, ontological, and epistemic-methodological terms. He discusses current models of the brain and applies these models to recent data on neuronal features underlying consciousness

and proposes the world-brain relation as the ontological predisposition for consciousness.

Krishnamurti's essential message is that to find truth, we must go beyond the limits of ordinary thought. In public talks

worldwide, he strove to free listeners from conventional beliefs and psychological mind-sets in order to understand what is. The essential message of J. Krishnamurti, revered philosopher and spiritual teacher to millions, challenges the limits of ordinary thought. In talks and teachings to audiences worldwide, he extricated his listeners from the tangled net of ideas, organizational beliefs and psychological mind-sets and pointed them to the bliss of truth. In the final volume of this

series, conversations with individual seekers explore many topics, including the cultivation of sensitivity, the problem of search, the importance of change, and "What is life all about?"

2021—Financial Times; A Best Philosophy Book of 2021—Five Books; A Best Book of 2021—The Economist Anil Seth's quest to understand the biological basis of conscious experience is one of the most exciting contributions to twenty-first-century science.

What does it mean to “be you”—that is, to have a specific, conscious experience of the world around you and yourself within it? There may be no more elusive or fascinating question.

Historically, humanity has

considered the nature of consciousness to be a primarily spiritual or philosophical inquiry, but scientific research is now mapping out compelling biological theories and explanations for consciousness and selfhood. Now, internationally renowned neuroscience professor, researcher, and author Anil Seth is offers a window into our consciousness in BEING YOU: A New Science of Consciousness. Anil Seth is both a leading expert on the neuroscience of

consciousness and one of most prominent spokespeople for this relatively new field of science. His radical argument is that we do not perceive the world as it objectively is, but rather that we are prediction machines, constantly inventing our world and

correcting our mistakes by the microsecond, and that we can now observe the biological mechanisms in the brain that accomplish this process of consciousness. Seth has been interviewed for documentaries aired on the BBC, Netflix, and

Amazon and podcasts by Sam Harris, Russell Brand, and Chris Anderson, and his 2017 TED Talk on the topic has been viewed over 11 million times, a testament to his uncanny ability to make unimaginably complex science accessible and entertaining.
