Religion is closely linked to social development as it often serves as the ideological fundament of a society and one of the foremost expressions of its culture. The articles in this volume are devoted to the study of religious crisis in Antiquity

and deal with these phenomena in the Ancient Near East, Rome, Greece, China and India.

This book introduces an approach that can be used to ground a variety of intelligent systems, ranging from simple fact based systems to highly sophisticated reasoning systems. As the popularity of AI related fields has grown over the last decade, the

number of persons interested in building intelligent systems has increased exponentially. Some of these people are highly skilled and experienced in the use of AI techniques, but many lack that kind of expertise. Much of the literature that might otherwise interest those in the latter category is not appreciated by them because the material is too technical, often needlessly so. The so called logicians see logic as a primary tool and favor a

formal approach to AI, whereas others are more content to rely on informal methods. This polarity has resulted in different styles of writing and reporting, and people entering the field from other disciplines often find themselves hard pressed to keep abreast of current differences in style. This book attempts to strike a balance between these approaches by covering points from both technical and nontechnical perspectives and by doing so in a way that is designed to hold the interest of readers of each persuasion. During recent years, a somewhat overwhelming number of books that present general overviews of AI related subjects have been placed on the market. These books serve an important function by providing researchers and others entering the field with progress reports and new developments.

Compensating Landowners in the Vicinity of Airports Taylor & Francis

The Chinese Exclusion Act of 1882, which barred practically all Chinese from American shores for ten years, was the first federal law that banned a group of immigrants solely on the basis of race or nationality. By changing America's

traditional policy of open immigration, this landmark legislation set a precedent for future restrictions against Asian immigrants in the early 1900s and against Europeans in the 1920s. Tracing the origins of the Chinese Exclusion Act, Andrew Gyory presents a bold new interpretation of American politics during Reconstruction and the Gilded Age. Rather than directly confront such divisive problems as class conflict, economic depression, and rising unemployment, he contends, politicians sought a safe, nonideological solution to the nation's industrial crisis--and latched onto Chinese exclusion. Ignoring workers' demands for an end simply to imported contract labor, they claimed instead that working people would be better off if there were no Chinese immigrants. By playing the race card, Gyory argues, national politicians--not California, not organized labor, and not a general racist atmosphere--provided the motive force behind the era's most racist legislation.

Courts of some Nordic countries started reviewing the constitutionality of

legislation long before judicial review was established elsewhere in Europe. This study examines the influence of American law and theories of judicial review on the development, practice and theorization of judicial review in Norway, Denmark, and Iceland from the 19th century to the present. The study describes how Nordic scholars in the late 19th century rationalized judicial review based on American theory and how American law influenced both their views of the institution and their way of thinking about substantive constitutional rights. These views in turn influenced Nordic jurisprudence for decades. The author then shows how the changes that took place in American constitutional jurisprudence in the 1930s and 1940s influenced Nordic constitutional theory and constitutional jurisprudence. These changes received significant attention in Nordic legal circles and the study examines how these changes, as well as the American and Nordic theory that built on them, influenced Nordic jurisprudence. Finally, it is argued that American influence in this area of law changed after 1965. Direct references to and discussions

of American law almost disappeared from Nordic jurisprudence. American constitutional law was, however, an important influence on the case-law of the European Court of Human Rights, which importance increased in this period. The European Convention of Human Rights and the Court's decisions have in turn immensely influenced Nordic constitutional law.

Crisis in Early Religion Springer

This volume presents a Type Theory of Law (TTL), claiming that this is a unique theory of law that stems from the philosophical understanding of Jung's psychological types applied to the phenomenon of law. Furthermore, the TTL claims to be a universal, general and descriptive account of law. To prove that, the book first presents the fundamentals of Jungian psychological types, as they had been invented by Jung and consequently developed further by his followers. The next part of the book describes how the typological structure of an individual determines their understanding of law. It then addresses the way in which inclusive legal theory can be understood based on this typology.

Finally, the book describes the TTL in general and descriptive terms and puts it into context. All in all, the book shows how the integral or inclusive approach to understanding the nature of law is not only in tune with our time, but also relevant for presenting a more persuasive picture of law than the older exclusivist or dualist approaches of strict natural law and rigid legal positivism did.

"Lawmaking and Adjudication in Archaic Greece" re-evaluates central aspects of the genesis and application of laws in the communities of archaic Greece, including the structure and function of legislative bodies, the composition of the courts, the administration of justice and the use and abuse of legal norms and procedures by litigants in the courts and everyday settings. Combining a detailed analysis of epigraphical and literary evidence and the application of a model of interpretation borrowed from cultural analyses of law, this book argues that far from being monolithic creations of archaic polities that unilaterally informed social life, archaic legal systems can be more appropriately viewed as ideologically

polyvalent and socially complex. It includes legal norms and the administration of justice articulated associations with divine and secular authority but also incorporated, mainly in their reception and application by average citizens, discourses of utility and resistance that actively contributed in the composition of social relations.

The purpose of this book is to consider the neighbour conflict arising between airports and neighbouring owners of land, particularly with residential uses, as well as to assess the existing solutions applied to manage or resolve that conflict. The book explains why the neighbour conflict between the airport and landowners is of a particular kind and what legal instruments are applied to address it in an attempt to balance the interests of opposing parties. Readers will develop an understanding of how the law operates when damage is caused by a legal act of the government and what the limits of compensable loss

are. In addition, the reader will discover the economic foundations of possible solutions and why not all market losses are legally compensable. Key features of this book include: a consideration of key legal concepts such as neighbour law, nuisance, protection of property, land use restrictions, liability, and compensation to inform a unique analysis of neighbour law in the context of conflict between airports and neighbouring landowners; practical guidance on an airport's legal liability towards neighbouring landowners; a comparative analysis of airport's liability, compensation claims, their scope and economic effects; a comparative overview of planning and environmental solutions applied in a variety of jurisdictions; a discussion of valuation methods and challenges when loss of property value is the measure of compensation. The Author's intention is to promote conscious and civil relations among market participants, as opposed to opportunistic and speculative behaviour. This book is important reading for lawyers, academics, PhD students and postgraduate students dealing with land use regulations, environmental law, compulsory purchase,

eminent domain and expropriation issues, compensation for property restrictions, as well as with aviation law and legal aspects of airport operations. The Law Times Springer Science & Business Media
Exciting the Industry of Mankind is the first comprehensive book about George Berkeley's revolutionary views on money and banking. Berkeley broke the conceptual link between money and metallic substance in *The Querist*, a work published between 1735 and 1737 in Dublin, consisting entirely of questions. *Exciting the Industry of Mankind* explains what economic and social forces caused Berkeley to write *The Querist* in response to a major economic crisis in Ireland. *Exciting the Industry of Mankind* falsifies the view that Berkeley has nothing to tell us about our present and future social and economic life. For the 'idealism' Berkeley found in the money form is now becoming a fact of global economic life, when 'xenomoney' and 'virtual money' exchanges begin to dwarf commodity transactions, and the future becomes the dominant temporal dimension of economic activity. Philosophers, historians, cultural

theorists, economists and lovers of Irish history will be interested in this volume. Closing the Gate Taylor & Francis
Policing the Global South provides scholarship which further transnationalises and democratizes ideas about policing practices and philosophies, highlighting renovations in approaches to policing studies, and injecting innovative perspectives into the study of policing from scholars positioned on the 'periphery'. Criminological knowledge depolarisation underscores a conscious effort by scholars from the Global South to increase intellectual knowledge focused on developing context-specific responses to issues not aligned to Northern ideological positions and specific to the non-Northern context. Such shifts draw attention to the expanse of spaces beyond Northern centres rife with challenges unlike any specific to those experienced or conceptualised by scholars from the Global North with an applied Northern criminological lens. Applying a postcolonial lens to empirical knowledge from country-specific cases in former colonies in Africa, Asia, the Caribbean, the Pacific, and Latin America, this book examines how policing

issues not aligned to Northern ideological positions and specific to non-Northern contexts are addressed. The primary purpose is to share innovations in the field of policing – service provision, threats to security, crime responses, justice and international trends – developed in postcolonial developing-country contexts. Given the aim of the book and the contributors' own research on issues of policing across the globe, it discusses themes including but not limited to the colonial legacies and their impact on policing; how plural regulatory systems and partnerships are navigated by the police; the linkages between access to justice, community perceptions, and police legitimacy; innovations and challenges in organisational reform, crime prevention, and community partnerships; and the expanding roles of police organisations in the Global South. While each chapter presents a policing issue in a country within a specific part of the Global South, the book highlights how important it is to frame responses based on contextual realities informed by an awareness of the past and present, with a goal of informing the future. Delivering a much-needed

introduction to those specialising in policing in developing countries, this book is invaluable reading for academics and students of criminology, criminal justice, governance, policy, and IR, as well as professionals in policing organizations across the globe.

Even though Corporate Social Responsibility (CSR) has become a widely accepted concept promoted by different stakeholders, business corporations' internal strategies, known as corporate self-regulation in most of the weak economies, respond poorly to this responsibility. Major laws relating to corporate regulation and responsibilities of these economies do not possess adequate ongoing influence to insist on corporate self-regulation to create a socially responsible corporate culture. This book describes how the laws relating to CSR could contribute to the inclusion of CSR principles at the core of the corporate self-regulation of these economies in general, without being intrusive in normal business

practice. It formulates a meta-regulation approach to law, particularly by converging patterns of private ordering and state control in contemporary corporate law from the perspective of a weak economy. It proposes that this approach is suitable for alleviating regulators' limited access to information and expertise, inherent limitations of prescriptive rules, ensuring corporate commitment, and enhance the self-regulatory capacity of companies. This book describes various meta-regulation strategies for laws to link social values to economic incentives and disincentives, and to indirectly influence companies to incorporate CSR principles at the core of their self-regulation strategies. It investigates this phenomenon using Bangladesh as a case study.

Torture, Psychoanalysis and Human Rights contributes to the development of that field of study called 'psycho-social' that is presently more and more committed to providing understanding of social phenomena, making use of the explicative perspective of psychoanalysis. The book

seeks to develop a concise and integrated framework of understanding of torture as a socio-political phenomenon based on psychoanalytic thinking, through which different dimensions of the subject of study become more comprehensible. Monica Luci argues that torture performs a covert emotional function in society. In order to identify what this function might be, a profile of 'torturous societies' and the main psychological dynamics of social actors involved – torturers, victims, and bystanders – are drawn from literature. Accordingly, a wide-ranging description of the phenomenology of torture is provided, detecting an inclusive and recurring pattern of key elements. Relying on psychoanalytic concepts derived from different theoretical traditions, including British object relations theories, American relational psychoanalysis and analytical psychology, the study provides an advanced line of conceptual research, shaping a model, whose aim is to grasp the deep meaning of key intrapsychic, interpersonal and group dynamics involved in torture. Once a sufficiently coherent understanding has been reached, Luci proposes using it as a groundwork

tool in the human rights field to re-think the best strategies of prevention and recovery from post-torture psychological and social suffering. The book initiates a dialogue between psychoanalysis and human rights, showing that the proposed psychoanalytic understanding is a viable conceptualisation for expanding thinking of crucial issues regarding torture, which might be relevant to human rights and legal doctrine, such as the responsibility of perpetrators, the reparation of victims and the question of 'truth'. *Torture, Psychoanalysis and Human Rights* is the first book to build a psychoanalytic theory of torture from which psychological, social and legal reflections, as well as practical aspects of treatment, can be mutually derived and understood. It will appeal to psychoanalysts, psychoanalytic psychotherapists and Jungians, as well as scholars of politics, social work and justice, and human rights and postgraduate students studying across these fields. This book, in its effort to formulate compatibility between Islamic law and the principles of international diplomatic law, argues that the need to harmonize the two legal systems and have a thorough cross-cultural understanding amongst nations generally with a view to enhancing unfettered diplomatic cooperation should be of paramount priority.

Jungian Counseling and Play Therapy is both an introduction to Jung's theory and a practical guide to Jungian-informed practice. Readers journey through the development of the mental health crisis of the digital age (which Jung foresaw) and are presented with solutions he suggested that are still being met with resistance, despite compelling facts. This book not only advocates for a more widespread integration of Jungian ideas into clinical practice, but also for greater acknowledgement of the integrity, creativity, and intersecting identities of clients, professional counselors, and play therapists. Integrating historical theory with contemporary research, this book helps students to weave creative

techniques into their online and in-person clinical work. This is an ideal text for a psychodynamic theory or methods class, or to support counseling students and supervisors becoming interested in, or familiar with, the work of Carl Jung.
