 CHAPTER 15 | Aqueous Equilibria: Chemistry of the Water World 15.1. Collect and Organize Figure P15 shows .1 four lines to describe the possible dependence of percent ionization of acetic acid with concentration. We are to choose the one that best represents the trend for this weak acid.
 CHAPTER 15 | Aqueous Equilibria: Chemistry of the Water

WorldThe Water Molecule: a Review Water is a simple tri-atomic molecule, H_2O Each O-H bond is highly polar, because of the high electronegativity of the oxygen (N, O, F, and Cl have high values) bond angle of water = 105° due to the bent shape, the O-H bond polarities do not cancel. This means: water is a polar molecule. use these activities to yourself study the vocabulary and major concepts presented in this chapter
