Communicating Effectively with Senior Executives Routledge

Several years ago when I began consulting full time, I quickly discovered that despite three advanced academic degrees my practical industrial experience had some significant gaps. It thus was necessary initially to spend considerable (nonbillable) time collecting and organizing a great deal of essential information on the various aspects of modern data communication. The task was made more difficult by the highly interdisciplinary nature of the field, with the required information scattered throughout the vast international literature of telecommunications, computers, electrical engineering, military systems, mathematics, operations research, optimization, speech processing, and the murky world of legal and regulatory policy. Although there were a number of fine books and periodicals in each of these specialized disciplines, I was unable to find a single comprehensive text that covered the entire field at even a modestly attractive technical and mathematical level. After going to the trouble of organizing all this diverse material for my clients and students, it seemed rather natural to put it into book form and thus share it with those professionals working with computer data communications who need a comprehensive coverage of the subject at a level immediately applicable to their work and yet easily accessible for self-study. The project was facilitated by an agreeable publisher and an incredibly understanding and cooperative family, and Practical Computer Data Communications is the result.

How are we to understand how the dominance of visual images and representations in late modernity affects Social Work practice, research and education? Social workers are increasingly using still and moving images to illustrate their work, to create new knowledge, and to further specific groups' interests. As a profession in which communication is central, visual practices are becoming ever more significant as they seek to carry out their work with, and for, the marginalised and disenfranchised. It is time for the profession to gain more critical, analytical, and practical knowledge of visual culture and communication, in order to use and create images in accordance with its central principle of social justice. That requires an understanding of them beyond representation. As important as this is, it is also where the profession's scholarly work in this area has remained and halted, and thus understanding of the work of images in our practices is limited. In order to more fully understand images and their effects - both ideologically and experientially - social workers need to bring to bear other areas of study such as reception studies, visual phenomenology, and the gaze. These other analytical frames enable a consideration not only of images per se, but also of their effect on the viewer, the human spectators, and the subjects at the heart of Social Work. By bringing understandings and experiences in Film, Media, and Communications, Visual Communication for Social Work Practice provides the reader with a wide range of critically analytical frames for practitioners, activists, educators, and researchers as they use and create images. This invites a deeper knowledge and familiarity with the power dimensions of the image, thus aligning with the social justice dimension of Social Work. Examples are provided from cinema, popular media, but more importantly from Social Work practitioners

themselves to demonstrate what has already been made possible as they create and use images to further the interpersonal, communal, and justice dimensions of their work. This book will be of interest to scholars, students, and social workers, particularly those with an interest in critical and creative methodologies.

Today's global citizens operate business and management endeavors on a global scale. Globalization generates an increasing demand for effective communication in diverse cultural contexts and challenges the relevance of culture in operating businesses in the global village. Communication differences are apparent in many scenarios. Expatriates of international organizations operating abroad adopt their native cultural values to motivate employees of foreign cultures with an entirely different perspective. They use one culture's motives to move people from other cultures. In global marketing communication, the communicators use values systems of their native culture to develop advertising for other cultures. They use categorizations of one culture to describe others. Such divergence in attitudes, perspectives and priorities of suppliers, and customers with different cultural backgrounds have led to many project failures in international organizations. An in-depth understanding of cultural backgrounds and the potential impact on communication of the people one is interacting with can increase the probability of business success among investors, managers, entrepreneurs and employees operating in diverse cultures. However, effective cross cultural business communication needs to recognize and adopt an interdisciplinary perspective in understanding the cultural forces (Leung, K. et al., 2005). Therefore, we need a multidisciplinary paradigm to carry on effective and successful business communication in our contemporary global village.
