Engineering Graphics An engineering drawing is a type of technical drawing that is used to convey information about an object. A common use is to specify the geometry necessary for the construction of a component and is called a detail drawing. Usually, a number of drawings are necessary to completely specify even a simple component. The drawings are linked together by a master drawing or assembly drawing which gives the drawing numbers of the subsequent detailed components, quantities required, construction materia

drawing - Wikipedia

Engineering graphics is the creation of engineering drawings. These are representations of physical objects/locations on paper (or in 2 dimensional or 3 Dimensional electronic format). In a typical introductory engineering graphics course it covers the basics of drawing view creation (left side, right side, etc.), presetantation of lines (Hidden, no hidden) and projections such as isometric.

What is engineering graphics? Engineering drawings are a universal language for engineers globally. It is very important to know how to read and create drawings. In this course you will start with a classic 2D

drawing approach to learn the basics and then progress to a workflow using cloud collaboration technology and advanced 2D to 3D workflows.
