 This report makes the case for better data
 collection by research institution and data
 sharing. A larger goal of this study is not
 only to propose ways to make the
 postdoctoral system better for the
 postdoctoral researchers themselves but
 also to better understand the role that
 postdoctoral training plays in the research
 enterprise. It is also to ask whether there
 are alternative ways to satisfy some of the
 research and career development needs of
 postdoctoral researchers that are now
 being met with several years of advanced
 training.

Enhancing the Postdoctoral Experience for Scientists and Engineers Springer

The Postdoc Landscape offers historical,
 international, and domestic examples,
 solutions, and strategies for addressing
 the needs of postdoctoral scholars in
 terms of their presence in government,
 industry, and the academy. Growing
 issues and concerns are identified with a
 clear direction in terms of what
 practitioners, policymakers, and educators
 can do to improve the working conditions
 of postdoctoral scholars. The book
 includes chapters centered on three
 themes: the Postdoc Landscape, Postdoc
 Support and Postdoc Career Literacy,
 Agency and Choice. This comprehensive
 reference serves as a guide for scholars,
 individuals who supervise and mentor
 postdoctoral scholars and policymakers.

Outlines practical tools to help universities
 and organizations develop an
 infrastructure for supporting postdocs
 Identifies the challenges that postdocs
 face and offers strategies on how to
 address the challenges Includes a diverse
 range of voices and experiences from
 leading experts in the field

 For more than fifteen years The Graduate
 School Funding Handbook has been an
 invaluable resource for students applying

to graduate school in the United States or abroad, at the master's, doctoral, and postdoctoral levels. Illuminating the competitive world of graduate education funding in the arts, humanities, sciences, and engineering, the book offers general and specific information in an intelligent, comprehensive, and straightforward manner so that readers can save time and make winning grant and fellowship applications. The authors include detailed descriptions of the types of funding offered graduate students, ranging from tuition scholarships to assistantships, work-study opportunities, and university loan programs. In addition, the handbook thoroughly covers the availability of nationally prominent grants and fellowships through the federal government and private organizations. This revised third edition provides a wealth of additional information and advice and details a number of new grant opportunities including several aimed at women, minorities, and other underrepresented student groups. Covering fellowships and grants for individual training, study abroad, research, dissertations, and postdoctoral work, the book includes useful addresses, deadlines, number of available awards, number of applicants, purpose of grants and restrictions, duration of awards, applicant eligibility, and application requirements. The information is comprehensive, detailed, and current, based on data from funding agencies through interviews, review of application packets, web site information, and the authors' many years of experience in the field.

Postdoctoral Research Fellowships for Physicians Crown

A guide to over 300 history-oriented sources of humanities grants, fellowships, and awards for undergraduate to senior postdoctoral scholars and groups with an expanded section on book and essay prizes.

[A Guide to Grants and Fellowships in International Forestry and Natural Resources](#) National Academies Press

The book makes a significant contribution to critical higher education studies, specifically to graduate employability research and to capabilities and education research. The book moves beyond the simplistic conception of alleged 'gaps' in graduate skills and 'mismatches' between employers and universities, and instead provides an innovative multi-dimensional and intersectional human capabilities conceptualisation of graduate employability. The book challenges an individualised notion of employability, instead locating employability issues in

social and economic conditions, and argues that employability choices cannot be divorced from inequality. Qualitative and quantitative data from multiple case-study universities in South Africa are used to explore the perceptions and experiences of diverse students, lecturers, support officers and employers, regarding what each university is doing, or should be doing, to enhance graduate economic opportunities and contribute to inclusive development. The book will be highly relevant to students, scholars and researchers in the fields of education and sociology, particularly those with an interest in graduate employability.

[Grants, Fellowships & Prizes of Interest to Historians](#) Cambridge University Press

A rising median age at which PhD's receive their first research grant from the National Institutes of Health (NIH) is among the factors forcing academic biomedical researchers to spend longer periods of time before they can set their own research directions and establish there independence. The fear that promising prospective scientists will choose other career paths has raised concerns about the future of biomedical research in the United States. At the request of NIH, the National Academies conducted a study on ways to address these issues. The report recommends that NIH make fostering independence of biomedical researchers an agencywide goal, and that it take steps to provide postdocs and early-career investigators with more financial support for their own research, improve postdoc mentoring and establish programs for new investigators and staff scientists among other mechanisms.

Grants and Fellowships of Interest to Historians Academic Press

Over a decade ago, the National Science Board (NSB) highlighted the importance of international collaboration in its call for increased government commitment to promoting international science and engineering (S&E) research and education. The NSB also identified the National Science Foundation (NSF) as having an important leadership role in international S&E research and education activities. Among NSF's postdoctoral programs, the International Research Fellowship Program (IRFP) is unique in its emphasis on providing postdoctoral fellows with international research experiences. Established in 1992, IRFP provides financial support to postdoctoral scientists for a research experience abroad lasting from 9 to 24 months; there is no restriction on the geographical location of the hosting institution. NSF contracted

with Abt Associates to conduct an evaluation of IRFP, to gather evidence about whether the IRFP program has achieved its goal of furthering the collaborative activities and international partnerships of early career STEM researchers. The evaluation found evidence that the IRFP program is meeting its goals. This report summarizes the findings from the evaluation of the International Research Fellowship Program (IRFP), which was designed to investigate the characteristics of IRFP applicants and their motivations for participation, the host researchers' motivations for participating in the program, participants' experiences in and perceptions of the program, and outcomes of the program. Findings from the evaluation of IRFP revealed important benefits of the program, on both an individual and a collective basis.

Step-by-step graduate school guide and self-help book complete with everything you need to know to succeed at all stages of your PhD from applying to graduate schools to successfully finishing the degree. Includes the FOUR STEPS that you can take for guaranteed and speedy graduation. Success is about knowing what it is going to take and this book will tell you just that. The How to PhD book achieved rank #1 BestSeller in the College Guides category and rank #3 in the Adult & Continuing Education category for Free books on Amazon. What is How to PhD? -- Graduate school handbook --Easy to read - -To the point --Self-help book --Everything you need to know Includes the below-listed and more: --Sample Statement of Purpose from a successful graduate school application --Sample advisor breakup email (for when you need to switch research groups) --Seven benefits you can leverage as a teaching assistant -- Complete steps for passing the "prelim" or candidacy exam --Ten ways to improve your talks --Complete steps for publishing your research in a top journal --The four types of journal papers you can contribute to in graduate school --Reasons why graduating is hard and how to tackle each situation --The four steps for guaranteed and speedy graduation While every PhD is unique, each one is a journey filled with challenge and struggle. How to PhD: The Graduate School Handbook is the first

book of a series and also the first of its kind. It is a book filled with everything I wish I had known before starting graduate school. Whether you are considering getting a PhD or have already started, this book is for you as it takes you through all the stages of getting the degree. It is complete with everything from how to get into graduate school to how to actually finish successfully. In between, you will learn about: --the importance of finding a good advisor, --finding a good advisor, -- how to pass the candidacy exam or "prelim", --fighting demoralization, --and how to communicate your research, including writing papers. Graduate school handbook Every chapter in this self-help book is meant to tackle a specific problem in your graduate school career. It all culminates in the most important chapter "Endgame" where I spell out how you can successfully wrap up your PhD. The How to PhD book also includes excerpts from my next book, specifically on the following topics: --To postdoc or not to postdoc, that is the tension --Job Search: Why adding value is the best thing to do Good news! You can get the book for free! Scroll to where it says 'Get it free' on the book's website - howtophd.org/ Then, simply type in your email and I will send you instructions on how to get the book for FREE. Doing a PhD can make you feel isolated and lead to mental health problems. This is why How to PhD exists. My goal is to provide community, support, and actionable steps to help students succeed in PhD programs and overcome the challenges of academia. Categories: self-help, college guides, adult and continuing education, PhD handbook, PhD help book, graduate school handbook *Limits of Supranational Justice* Petersons The beauty of science may be pure and eternal, but the practice of science costs money. And scientists, being human, respond to incentives and costs, in money and glory. Choosing a research topic, deciding what papers to write and where to publish them, sticking with a familiar area or going into something new—the payoff may be tenure or a job at a highly ranked university or a prestigious award or a bump in salary. The risk may be not getting any of that. At a time when science is seen as an engine of economic growth, Paula Stephan brings a keen understanding of the ongoing cost-benefit calculations made by individuals and institutions as they compete for resources and reputation. She shows how universities offload risks by increasing the percentage of non-tenure-track faculty, requiring tenured faculty to pay salaries

from outside grants, and staffing labs with foreign workers on temporary visas. With funding tight, investigators pursue safe projects rather than less fundable ones with uncertain but potentially path-breaking outcomes. Career prospects in science are increasingly dismal for the young because of ever-lengthening apprenticeships, scarcity of permanent academic positions, and the difficulty of getting funded. Vivid, thorough, and bold, *How Economics Shapes Science* highlights the growing gap between the haves and have-nots—especially the vast imbalance between the biomedical sciences and physics/engineering—and offers a persuasive vision of a more productive, more creative research system that would lead and benefit the world.

Bridges to Independence Univ of California Press

The concept of postdoctoral training came to science and engineering about a century ago. Since the 1960s, the performance of research in the United States has increasingly relied on these recent PhDs who work on a full-time, but on a temporary basis, to gain additional research experience in preparation for a professional research career. Such experiences are increasingly seen as central to careers in research, but for many, the postdoctoral experience falls short of expectations. Some postdocs indicate that they have not received the recognition, standing or compensation that is commensurate with their experience and skills. Is this the case? If so, how can the postdoctoral experience be enhanced for the over 40,000 individuals who hold these positions at university, government, and industry laboratories? This new book offers its assessment of the postdoctoral experience and provides principles, action points, and recommendations for enhancing that experience.

Directory of International Grants and Fellowships in the Health Sciences National Academies Press

A rich and gripping account of the challenges of transnational legal mobilization against an authoritarian regime engaged in state violence.

[Postdoctoral Research Fellowship Opportunities](#)

The definitive career guide for grad students, adjuncts, post-docs and anyone else eager to get tenure or turn their Ph.D. into their ideal job Each year tens of thousands of students will, after years of hard work and enormous amounts of money, earn their Ph.D. And each year only a small percentage of them will land a job that justifies and rewards their investment. For every comfortably tenured professor or well-paid former academic, there are countless underpaid and overworked adjuncts, and many more who simply give up in frustration. Those who do make it share an important asset that separates them from the pack: they have a plan. They understand exactly what they need to do to set themselves up for success. They know what really moves the needle in academic job searches, how to avoid the all-too-common mistakes that sink so many of their peers, and how to decide when to point their Ph.D. toward other, non-academic options. Karen Kelsky has made it her mission to help readers join the select few who get the most out of their Ph.D. As a former tenured professor and department head who oversaw numerous academic job searches, she knows from experience exactly what gets an academic applicant a job. And as the creator of the popular and widely respected advice site *The Professor Is In*, she has helped countless Ph.D.'s turn themselves into stronger applicants and land their dream careers. Now, for the first time ever, Karen has poured all her best advice into a single handy guide that addresses the most important issues facing any Ph.D., including: -When, where, and what to publish -Writing a foolproof grant application -Cultivating references and crafting the perfect CV -Acing the job talk and campus interview -Avoiding the adjunct trap -Making the leap to nonacademic work, when the time is right *The Professor Is In* addresses all of these issues, and many more.
