R. A. Schwaller de Lubicz (1887-1961), one of the most important Egyptologists of this century, links the sacred science of the Ancients to its rediscovery in our own time. Sacred Science represents the first major breakthrough in understanding ancient Egypt and identifies Egypt, not Greece, as the cradle of Western thought, theology, and science.

A unique translation from the original Greek of the second century spiritual master Origen, developed and handed down by a reknown Scottish scholar and made available nearly one hundred years later in memory of Dr. Charles Ashanin whose last days were devoted to this project. From the book: Who would not say that it is impossible for man to trace out things in heaven? Yet this impossible thing, by the surpassing grace of God, becomes possible; for he who was caught up unto a third heaven traced out things in the three heavens through having heard unutterable utterances which it was not permitted for man to speak. Who can say that it is possible for the mind of the Lord to be known by man?

The current ecological crisis is a matter of urgent global concern, with solutions being sought on many fronts. In this book, Seyyed Hossein Nasr argues that the devastation of our world has been exacerbated, if not actually caused, by the reductionist view of nature that has been advanced by modern secular science. What is needed, he believes, is the recovery of the truth to which the great, enduring religions all attest; namely that nature is sacred. Nasr traces the historical process through which Western civilization moved away from the idea of nature as sacred and embraced a world view which sees humans as alienated from nature and nature itself as a machine to be dominated and manipulated by humans. His goal is to negate the totalitarian claims of modern science and to re-open the way to the religious view of the order of nature, developed over centuries in the cosmologies and sacred sciences of the great traditions. Each tradition, Nasr shows, has a wealth of knowledge and experience concerning the order of nature. The resuscitation of this knowledge, he argues, would allow religions all over the globe to enrich each other and cooperate to heal the wounds inflicted upon the Earth.

A prosthesis that can communicate with and be controlled by your brain. A microchip placed in the eye of a person previously blind that allows the patient to see again. A machine that can tell us what a person is thinking about. Drugs tailor made for a specific person to help them deal with emotional issues. The stuff of science fiction? No. It is reality. The human brain is not only our most complex organ, but also the most complex entity known to mankind. We are in an age of fantastic and prolific neurological research with advances occurring faster than in any other scientific field. This research promises to help us with our mental health, social adjustment, satisfaction with life, our ability to learn, and our ability to remember, (and forget). The brain contains approximately 90 billion neurons. We are beginning to understand their functions more and more each day. This three-pound organ the shape of a cauliflower has fascinated man for centuries. The study of the brain is now less philosophical and more scientific. As neurological research becomes more and more enlightening and practical, a general understanding of the brain and the major issues of neurological science become more important. It is not rocket science or brain surgery (pun intended) to have a basic understanding of the state of our knowledge of the brain today. This book will acquaint the reader with thirty of the most important and interesting topics in the study of the brain. The author will assume that the reader has limited knowledge of the brain and it's functions, and will present information in every day language with very limited use of scientific jargon. The brain is responsible for how we perceive our world and how we behave in it. Let us begin our journey of understanding it.

This is an account of one of life's most painful experiences--the sudden death of a child. A mother's anguish compels her to examine beliefs about what comes after death and to explore ancient healing methods in Mexico, Brazil, and Bali. At its core a spiritual odyssey, The Sacred Wound is about creating meaning from life-shattering events--events which can utterly destroy us or serve as a call to extraordinary courage and growth. A life-shattering event is a modern day "sacred wound," a wounding so profound that it pierces the soul and penetrates the veils of who we are and what we think life is about. Like a mythological hero, we will emerge from the ordeal another person. As the author says, "For three years grief was my consort, it became my teacher." This inspiring and searingly honest book is about more than survival following the death of a loved one; it is about the gift in tragedy's other hand. It is about discovering the truth that love is the central experience of life and not simply mortality, and that this truth can emerge in ways we can never predict or expect

In Symbols of Sacred Science, Guénon, a master of precise, even 'mathematical' metaphysical exposition, reveals himself as a consummate exegete of myth and symbolism as well, superior in many ways to Mircea Eliade, and comparable perhaps only to his respected friend Ananda K.

Coomaraswamy. This extraordinary text unveils the cosmological meanings of root symbols organized under such general headings as: The Center of the World, Cyclic Manifestation, Symbolic Weapons, Axial Symbolism and the Symbolism of Passage, The Symbolism of Building, and The Symbolism of the Heart. Far more than a simple catalogue of myths and symbols from many traditions, Symbols of the Sacred Science lays the foundation for a universal esoteric symbology. In this work, Guénon demonstrates the fundamental unity-across all cultures and ages-of the images with which the Absolute clothes itself in its cosmic self-revelation.

Most books about Kung Fu or Karate deal with techniques or history. Few examine the underlying purpose of these arts, or approach them as a tool for spiritual, rather than physical, development. Barefoot Zen is a brave new approach to the martial arts, which clearly demonstrates that the traditional movements of both Kung Fu and Karate, contained in the solo choreographed sequences of movements known as forms (or kata), grew out of the spiritual practices of the Shaolin order of Buddhist monks and nuns. Nathan Johnson explains that this mystical and non-violent teaching is a profound and beautiful expression of Chan (Zen) Buddhism and its pur-suit of wisdom, peace, and enlightenment. Contrary to popular assumption, he contends that it was never intended to be an actual means of self-defense. Barefoot Zen bridges the gap between Kung Fu and Karate, and reveals their common origin through the disclosure of vital research material on three of the world's most important Karate kata. Part I explains the spiritual disciplines that contributed to what we know as the martial arts. Part II explains the creation of the art along with practical instruction for performing kata. Part III explains the formation of many of the world's Kung Fu styles. We learn that the original "empty hand art" was used as a method of kinetic meditation between pairs and was designed as a practical tool to assist practitioners in transcending the fear and insecurity of everyday living. Barefoot Zen makes the legacy of the Shaolin way accessible to all, releasing the art from the clutches of popular images and painful concerns about self-defense. The legendary courage of the Shaolin (Chan/Zen) order was not developed by fighting with enemies, but by not fighting! The Shaolin teaching was designed to free us from fear, the only true enemy.

"The need for scientific knowledge springs from a natural human curiosity to understand our world, but also from a genuine desire to help humanity. The great scientific discoveries have given us incredible knowledge about the natural world, have improved our lives through new technologies, and have taught us a great deal about the capabilities and the limitations of our human perspective." In The Mind of Science: From Aristotle to Einstein, author Michael Sidiropoulos takes you on a thought-provoking journey through the history of science from a philosophical standpoint. Beginning with the calculation of the size of the earth by Eratosthenes, chief librarian at the Library of Alexandria, Sidiropoulos for the most part avoids the use of mathematical formulas as he explores the ideas, and ideals, that lie behind scientific advancement throughout the ages. It's a fascinating voyage that will enrich you with a greater awareness of the interplay between science and philosophy-how they're similar, how they're different, and how they complement each other.
