Perspectives on Classifier Constructions in Sign Languages

Springer Science & Business Media

This volume contains 26 papers selected from the 35th Annual Conference on African Linguistics (ACAL 35), which was held at Harvard University in 2004. The theme of the conference, "African Languages and Linguistics in Broad Perspective," was an open invitation to go beyond traditional linguistic theorizing and to discuss issues of greater sociolinguistic and cultural meaning, outside of Africa as well as on the continent. The selected papers of this volume represent a broad range of papers selected for their significance, breadth of coverage, and depth of analysis, written by scholars from around the globe.

Terminology Legare Street Press

Modern families face challenges unprecedented in human history. The time, attention and vigilance required of parents is exhausting and consuming family life. Parents are required to balance complex schedules, be technology aware, social media

informed, constantly monitor children's screen time and media communication, cope with academic problems, shield them from the dangers of immorality, find inventive ways to overcome their boredom, organize extracurricular activities, and handle everything within financially constrained circumstances that increasingly require both to be working. Little wonder that anxiety is on the rise and parents are increasingly fearing for their children's future. The authors in this book attempt to address parents' concerns and equip them with the confidence and tools necessary to work towards understanding and addressing the real needs of both themselves and their children, to nurture the child's character, self-confidence, life skills, moral boundaries, spiritual development and much more. There is no quick-fix. Myths are debunked, and practical tips offered throughout which can be implemented immediately, with fun activities outlined at the end of each chapter with the aim of improving parent-child relationships through bonding, love, patience, openness, respect and communication.

Parent-Child Relations: A Guide to Raising Children (Revised Edition) Heinemann

This work has been selected by scholars as being culturally

important, and is part of the knowledge base of civilization as we know it. This work is in the "public domain in the United States of America, and possibly other nations. Within the United States, you may freely copy and distribute this work, as no entity (individual or corporate) has a copyright on the body of the work. Scholars believe, and we concur, that this work is important enough to be preserved, reproduced, and made generally available to the public. Grundzüge Der Phonologie. English ScribeDigital.com

Since 2000, IOM has been producing world migration reports. The World Migration Report 2020, the tenth in the world migration report series, has been produced to contribute to increased understanding of migration throughout the world. This new edition presents key data and information on migration as well as thematic chapters on highly topical migration issues, and is structured to focus on two key contributions for readers: Part I: key information on migration and migrants (including migration-related statistics); and Part II: balanced, evidence-based analysis of complex and emerging migration issues.

Biosemiotics in Transdisciplinary Contexts Cambridge University Press

Research Methods: The Basics is an accessible, user-friendly introduction to the different aspects of research theory, methods and practice. This second edition provides an expanded resource suitable for students and practitioners in a wide range of disciplines including the natural sciences, social sciences and humanities. Structured in two parts – the first covering the nature of knowledge and the reasons for research, the second the specific methods used to carry out effective research and how to propose, plan, carry out and write up a research project – this book covers:

- Reasons for doing a research project
- Structuring and planning a research project
- The ethical issues involved in research
- Different types of data and how they are measured
- Collecting and analysing qualitative and quantitative data in order to draw sound conclusions
- Mixed methods and interdisciplinary research
- Devising a research proposal and writing up the research
- Motivation and quality of work.

Complete with a glossary of key terms and guides to further reading, this book is an essential text for anyone coming to research for the first time.

God Createspace Independent Publishing Platform

Language is like a vast spider's web. In this volume Jean Aitchison explores the different facets of this web. She begins with the cobweb of false worries which surrounds language. She then discusses how language evolved in the human species, how children acquire it, and how educated English speakers remember 50,000 or more words. Finally, she argues that people are right to be concerned about language, though not in the ways traditionally assumed. This is the text of the 1996 BBC Reith lectures, slightly revised for publication, with illustrations and full references, and an afterword which looks at the reception of the lectures.

The Apocalypse Revealed Psychology Press

This book highlights the facts that were not known before the turn of the 20th century, and have just started to be understood within the framework of the recently introduced theory of landforms and plate tectonics. These point only to a single aspect of the miraculous nature of the Qur'an, namely its scientific notions. Among an endless list of evidences that go far beyond the scope of this publication, such explicit, precise and comprehensive scientific statements provide an eloquent testimony to the belief that the Qur'an is the Word of the Creator. Hence, it is the basic source of Divine guidance to man, at a time

when all previous revelations have either been lost or distorted.

Phonological Theory Routledge

This work has been selected by scholars as being culturally important, and is part of the knowledge base of civilization as we know it. This work was reproduced from the original artifact, and remains as true to the original work as possible. Therefore, you will see the original copyright references, library stamps (as most of these works have been housed in our most important libraries around the world), and other notations in the work. This work is in the public domain in the United States of America, and possibly other nations. Within the United States, you may freely copy and distribute this work, as no entity (individual or corporate) has a copyright on the body of the work. As a reproduction of a historical artifact, this work may contain missing or blurred pages, poor pictures, errant marks, etc. Scholars believe, and we concur, that this work is important enough to be preserved, reproduced, and made generally available to the public. We appreciate your support of the preservation process, and thank you for being an important part of keeping this knowledge alive and relevant.

The History of the Laser Routledge

How we raise young children is one of today's most highly personalized and sharply politicized issues, in part because each of us can claim some level of "expertise." The debate has intensified as discoveries about our development-in the womb and in the first months and years-have reached the popular media. How can we use our burgeoning knowledge to assure the well-being of all young children, for their own sake as well as for the sake of our nation? Drawing from new findings, this book presents important conclusions about nature-versus-nurture, the impact of being born into a working family, the effect of politics on programs for children, the costs and benefits of intervention, and other issues. The committee issues a series of challenges to decision makers regarding the quality of child care, issues of racial and ethnic diversity, the integration of children's cognitive and emotional development, and more. Authoritative yet accessible, *From Neurons to Neighborhoods* presents the evidence about "brain wiring" and how kids learn to speak, think, and regulate their behavior. It examines the effect of the climate-family, child care, community-within which the child grows.

Language Adaptation Kraft Books

Lexical Semantics is about the meaning of words. Although obviously a central concern of linguistics, the semantic behaviour of words has been unduly neglected in the current literature, which has tended to emphasize sentential semantics and its relation to formal systems of logic. In this textbook D. A. Cruse establishes in a principled and disciplined way the descriptive and generalizable facts about lexical relations that any formal theory of semantics will have to encompass. Among the topics covered in depth are idiomaticity, lexical ambiguity, synonymy, hierarchical relations such as hyponymy and meronymy, and various types of oppositeness. Syntagmatic relations are also treated in some detail. The discussions are richly illustrated by examples drawn almost entirely from English. Although a familiarity with traditional grammar is assumed, readers with no technical linguistic background will find the exposition always accessible. All readers with an interest in semantics will find in this original text not only essential background but a stimulating new perspective on the field.

Swahili Poetry East African Publishers

A dictionary of linguistics and philosophy of language.

School Health Education to Prevent AIDS and STD Cambridge University Press

Language Adaptation examines the process by which a speech community is forced to adopt an active role in making its

language suitable for changing functional requirements. This wide-ranging collection of essays looks at this phenomenon from a variety of historical and synchronic perspectives, and brings together the work of a number of leading scholars in the field. Several different languages are examined at different stages of their history, including Hebrew, Arabic, Chinese, Japanese, Kiswahili, German and Hindi. This well-informed book is a significant contribution to the existing literature on language planning, and is the first to use one theoretical concept to deal with the relationship between natural and deliberate language change. It shows that language adaptation is a particular aspect of language change, and thus establishes a link between the social and the historical study of language. It will appeal to graduate students and professionals in linguistics and the social sciences, as well as to practitioners of language planning.

Conservation Agriculture as Practised in Tanzania Walter de Gruyter

Classifier constructions are universal to sign languages and exhibit unique properties that arise from the nature of the visual-gestural modality. The major goals are to bring to light critical issues related to the study of classifier constructions and to present state-of-the-art linguistic and psycholinguistic analyses of these constructions. It is hoped that by doing so, more researchers will be inspired to investigate the nature of classifier constructions across signed languages and further explore the unique aspects of these forms. The papers in this volume discuss the following issues: *how sign language classifiers differ from spoken languages; *cross-linguistic variation in sign language classifier systems; *the role of gesture; *the nature of morpho-syntactic and phonological constraints on classifier constructions; *the grammaticization process for these forms; and *the acquisition of classifier forms. Divided into four parts, groups of papers focus on a particular set of issues, and commentary papers end each section.

The Language Web Cambridge University Press

This is a comprehensive introduction to theoretical linguistics. It presupposes no previous knowledge and terms are defined as they are introduced; but it gives a rigorous and technical treatment of a wide range of topics, and brings the reader to an advanced level of understanding. Since its first publication in 1968 *Introduction to Theoretical Linguistics* has been one of the classic introductions to the discipline. In a field which is often seen as rapidly moving, it will continue to be used by students seeking an overview of the central areas of linguistics - phonetics and phonology, grammar and semantics - and to be of great value to anyone interested in the ways in which theory can help to explain the key problems of human language.

Poetics of Rage International Institute of Islamic Thought (IIIT)

Since the invention of the first working laser in 1960, development of these devices has progressed at an unprecedented rate, to the extent that the laser is now a common part of everyday life, from the semiconductor laser used in CD players and telecommunication systems to the high power eximer lasers used in manufacturing processes. This book tra

Certificate in Child Care and Education Cambridge University Press

This study explores the nationalist imagination, artistic philosophy and the overtly political dimension of Remi Raji's poetry. It is an attempt to construct a sustained critical discourse on Raji's ongoing body of works. Raji is one of the major poetic voices on the Nigerian literary scene today. With the publication of his first collection, *A Harvest of Laughters*, in 1997 Raji has continued to strengthen his craft and vision through subsequent

volumes: *Webs of Remembrance* (2000), *Shuttlesongs: America - a Poetic Guided Tour* (2003), *Lovesong for My Wasteland* (2005); and *Gather My Blood Rivers of Song* (2009). Evidently he has attained poetic maturity and, given the frequency of his output, is set to realise a fulfilled poetic career. His maturation thus far through these five volumes deserves a major critical assessment, and a possible prediction for the direction of his artistic vision.

Guide to Assessment United Nations

Plant neurobiology is a newly emerging field of plant sciences. It covers signalling and communication at all levels of biological organization - from molecules up to ecological communities. In this book, plants are presented as intelligent and social organisms with complex forms of communication and information processing. Authors from diverse backgrounds such as molecular and cellular biology, electrophysiology, as well as ecology treat the most important aspects of plant communication, including the plant immune system, abilities of plants to recognize self, signal transduction, receptors, plant neurotransmitters and plant neurophysiology. Further, plants are able to recognize the identity of herbivores and organize the defence responses accordingly. The similarities in animal and plant neuronal/immune systems are discussed too. All these hidden aspects of plant life and behaviour will stimulate further intense investigations in order to understand the communicative plants in their whole complexity.

Lessons from Islam National Academies Press

This massive authoritative Swahili dictionary, is the most definitive and comprehensive in existence. It has taken a team of lexicographers and academics fourteen years to prepare, with the support of the Institute of Kiswahili Research in Dar es Salaam. The last comparable edition was in 1939, and was primarily intended to help the user to comprehend English texts. The dictionary records new words and meanings of words which the language has acquired since 1939; and provides lexicographical information needed by current dictionary users. There are more than 50,000 entries, with an attempt to give every English word an equivalent in Swahili, or otherwise a phrase; and the vocabulary covers both general and specialized language. Guidance is provided on use and connotation, word formation and syntax, and derivatives and compounds of a headword are explicitly shown in each entry. The full information and arrangement given for each entry is: headword, homographs, wordclass, alternative spelling of a headword, cross-reference, gloss, definition, subject label, usage label, regional label, senses separated by numbers, illustrative examples, compounds, derivatives, and adjectival complementation.

Research Methods: The Basics Cambridge University Press

Certificate in Child Care and Education is clearly written and covers all the underpinning knowledge needed to study for the examination in the CACHE Certificate in Child Care and Education.

Phonology American Trust Publications

The problem of body and soul has a long history that can be traced back to the beginnings of Greek culture. The existential question of what happened to the soul at the moment of death, whether and in what form there is life after death, and of the exact relationship between body and soul was answered in different ways in Greek philosophy, from the early days to Late Antiquity. The contributions in this volume not only do justice to the breadth of the topic, they also cover the entire period from the Pre-Socratics to Late Antiquity. Particular attention is paid to Plato, Aristotle and Hellenistic philosophers, that is the Stoics and the Epicureans.
