Contrary to popular belief Polio is not extinct. This is the true story of an indomitable spirit afflicted with unimaginable physical and psychological challenges. Paul Alexander's life is a saga that started in 1946 and has been profoundly shaped by the Polio epidemic of the early 1950's. Survivors of the 1950's Polio Epidemic in America are rare. Polio victims, like Paul Alexander, who require the assistance of an "Iron Lung" respirator for their life's breath are even rarer. Paul Alexander has

crafted his life against all odds and has a courageous and compelling story to share with us all. Victims of Polio, their families, friends and communities are struggling to cope with this obscure but still dangerous infectious disease. This book is a testimony to the strength of the human spirit and an affirmation of the need to continue efforts to eradicate the pestilence of Polio from the planet.

Frank St. Martin has been a healer since childhood. His grandmother feared for his safety if his "gifts" were talked about so he became "The Silent Healer".

Throughout his life, Frank has allowed God to work through him to heal himself, other people and animals. His memoir is an adventure into the unknown, where faith, belief and willingness to be a channel for divine healing power result in what many would call "miracles". At

the age of 80, Frank St. Martin is still working and healing others.

Music therapy is recognised as being applicable to a wide range of healthcare and social contexts. Since the first edition of Music Therapy: An art beyond words, it has extended into areas of

general medicine, mainstream education and community practice. This new edition revises the historical and theoretical perspectives and recognises the growing evidence and research base in contemporary music therapy. Leslie Bunt and Brynjulf Stige document the historical evolution of music therapy and place the practice within seven current perspectives: medical, behavioural, psychoanalytical, humanistic, transpersonal, culture-centred and music-centred. No single perspective, individual or group approach is privileged, although the focus on the use of sounds and music within therapeutic relationships remains central. Four chapters relate to areas of contemporary practice across different stages of the lifespan: child health, adolescent health,

adult health and older adult health. All include case narratives and detailed examples underpinned by selected theoretical and research perspectives. The final two chapters of the book reflect on the evolution of the profession as a community resource and the emergence of music therapy as an academic discipline in its own right. A concise

introduction to the current practice of music therapy around the world, Music Therapy: An art beyond words is an invaluable resource for professionals in music therapy and music education, those working in the psychological therapies, social work and other caring professions, and students at all levels.
