You've researched your character extensively, tailored her to your audience, sketched hundreds of versions, and now you lean back content as you gaze at your final character model sheet. But now what? Whether you want to use her in an animated film, television show, video game, web comic, or children's book, you're going to have to make her perform. How a character looks and is costumed starts to tell her story, but her body language reveals even more. Character Mentor shows you how to pose your character, create emotion through facial expressions, and stage your character to create drama. Author Tom Bancroft addresses each topic with clear, concise prose, and then shows you what he really means through commenting on and redrawing artwork from a variety of student "apprentices." His assignments allow you to join in and bring your drawing to the next level with concrete techniques, as well as more theoretical analysis. Character Mentor is an apprenticeship in a book. Professional artists from a variety of media offer their experience through additional commentary. These include Marcus Hamilton (Dennis the Menace), Terry Dodson (X-Men), Bobby Rubio (Pixar), Sean "Cheeks" Galloway (Spiderman animated), and more. With a foreword by comicbook artist Adam Hughes, who has produced work for DC, Marvel Comics, Lucasfilm, Warner Bros. Pictures, and

other companies.

Humanists are sometimes accused of being so focused on the human race that they ignore the environment and other species. This book is designed to address these criticisms. The contributors, all humanists in the naturalistic tradition, show that in fact humanism as a worldview has much to offer environmentalism. Since humanists are committed to working for a global community in which all humans can flourish, they are as concerned about ecological degradation as environmentalists. But in regard to what should be done about environmental problems, humanists do not hesitate to use the best scientific information and technology to reclaim the natural world while ensuring the welfare of all human beings. Humanists stress that science and technology must be used responsibly and that human beings must learn to give up destructive ideological fantasies, whether political or religious. The contributors are Vern L. Bullough, Gwen Whitehead Brewer, Richard Gilbert, Michael J. Kami, Gerald Larue, Timothy J. Madigan, Sarah Oelberg, Don Page, Howard B. Radest, Philip J. Regal, Andreas Rosenberg, Harvey Sarles, David Schafer, John M. Swomley, Robert B. Tapp, Michael Werner, and Carol Wintermute.

"The first two lessons of Core Java LiveLessons, Second Edition, quickly review the history of Java and show you, step by step, how to install the software development environment. In lesson 3, you will learn how to do in Java what you already know in another programming language: write branches and loops, and work with numbers, strings, and arrays. Lesson 4 covers object-oriented programming. Java is thoroughly object-oriented, and the lesson

shows you how to use built-in classes and how to build your own. Lessons 5 and 6 cover inheritance and interfaces as well as the lambda expressions, a powerful new feature of Java SE 8. Lesson 7 shows you what to do when your programs do the wrong thing. The lesson covers exception handling, logging, and debugging. In lesson 8, you will learn how to write generic code that works for many different data types. Lesson 9 puts those skills to work, when we examine the multitude of Java collections that allow you to organize your data in many ways. The final three lessons introduce the fundamentals of user interface programming in Java."--Resource description page.

Build your expertise in the BPF virtual machine in the Linux kernel with this practical guide for systems engineers. You'll not only dive into the BPF program lifecycle but also learn to write applications that observe and modify the kernel's behavior; inject code to monitor, trace, and securely observe events in the kernel; and more. Authors David Calavera and Lorenzo Fontana help you harness the power of BPF to make any computing system more observable. Familiarize yourself with the essential concepts you'll use on a day-to-day basis and augment your knowledge about performance optimization, networking, and security. Then see

how it all comes together with code examples in C, Go, and Python. Write applications that use BPF to observe and modify the Linux kernel's behavior on demand Inject code to monitor, trace, and observe events in the kernel in a secure way—no need to recompile the kernel or reboot the system Explore code examples in C, Go, and Python Gain a more thorough understanding of the BPF program lifecycle

Why does one smoker die of lung cancer but another live to 100?

The answer is 'The Hidden Half' - those random, unknowable

variables that mess up our attempts to comprehend the world. We humans are very clever creatures - but we're idiots about how clever we really are. In this entertaining and ingenious book, Blastland reveals how in our quest to make the world more understandable, we lose sight of how unexplainable it often is. The result - from GDP figures to medicine - is that experts know a lot less than they think. Filled with compelling stories from economics, genetics, business, and science, The Hidden Half is a warning that an explanation which works in one arena may not work in another. Entertaining and provocative, it will change how you view the world.
