How stringent should environmental and occupational safety regulations be? How far should Medicaid support go? Should funding for research on Alzheimer's disease be increased? Should more money be spent on programs to discourage smoking? What are appropriate ways to determine damages in wrongful injury or death suits? Toward answering such questions, this volume examines various models of health valuation, including the cost-of-illness, preventive-expenditures, and quality-adjusted-life-year approaches. The authors favor a willingness-to-pay approach grounded in individual preferences.

Solar Energy Update

This report provides actionable advice on how to design and implement fiscal policies for both development and climate action. Building on more than two decades of research in development and environmental economics, it argues that well-designed environmental tax reforms are especially valuable in developing countries, where they can reduce emissions, increase domestic revenues, and generate positive welfare effects such as cleaner water, safer roads, and improvements in human health. Moreover, these reforms need not harm competitiveness. New empirical evidence from Indonesia and Mexico suggests that under certain conditions, raising fuel prices can actually increase firm productivity. Finally, the report discusses the role of fiscal policy in strengthening resilience to climate change. It provides

evidence that preventive public investments and measures to build fiscal buffers can help safeguard stability and growth in the face of rising climate risks. In this way, environmental tax reforms and climate risk-management strategies can lay the much-needed fiscal foundation for development and climate action.
