An Introduction Routledge

From the schools of ancient times to the present day, Gary Thomas explores how and why education has evolved as it has. Examining education worldwide, he explains the way schools work, noting how curricula are remarkably consistent around the world. Delving into some of the big questions, Thomas explores the history of education in this Very Short Introduction. Considering various styles such as progressive versus formal, he also explores the ideas of some of the big theorists, including Piaget and Vygotsky. Looking at different forms of education and styles of teaching, he considers the ways in which education is being improved by matching styles of learning to teaching, and ensuring that schools are more inclusive and meaningful for a broader range of students. He finishes by considering the ways in which education may develop over the coming century. ABOUT THE SERIES: The Very Short Introductions series from Oxford University

This volume outlines the assumptions and beliefs that distinguish the concept of the reflective teacher from the view of the teacher as passive and a mere technician -- a view that teacher education programs and schools have historically promoted. The authors demonstrate how various conceptions of reflective teaching differ from one another. They believe that it is only through teachers' reflections on their own teaching that they become more skilled, more capable, and in general better teachers. This is the first volume in the "Reflective Teaching and the Social

Conditions of Schooling" series. The major goal of both this book and of all of the volumes to follow in this series is to help teachers explore and define their own positions with regard to the topics and issues at hand within the context of the aims of education in a democratic society.

Far too often, our students attain only a superficial level of knowledge that fails to prepare them for deeper challenges in school and beyond. In *Teaching for Deeper Learning*, renowned educators and best-selling authors Jay McTighe and Harvey F. Silver propose a solution: teaching students to make meaning for themselves. Contending that the ability to "earn" understanding will equip students to thrive in school, at work, and in life, the authors highlight seven higher-order thinking skills that facilitate students' acquisition of information for greater retention, retrieval, and transfer. These skills, which cut across content areas and grade levels and are deeply embedded in current academic standards, separate high achievers from their low-performing peers. Drawing on their deep well of research and experience, the authors - Explore what kind of content is worth having students make meaning about. - Provide practical tools and strategies to help teachers target each of the seven thinking skills in the classroom. - Explain how teachers can incorporate the thinking skills and tools into lesson and unit design. - Show how teachers can build students' capacity to use the strategies independently. If our goal is to prepare students to meet the rigorous demands of school, college, and career, then we must foster their ability to respond to such challenges. This comprehensive, practical guide will enable teachers to engage students in the kind of learning that yields enduring understanding and valuable skills that they can use throughout their lives.
