A Reader's Guide to

the Great Religions

Cambridge University
Press

Archaeological research in
Sweden and Denmark has
uncovered a startling
array of evidence over the

last 150 years, but until
now there has been no
comprehensive synthesis
and interpretation of the
material. An Ethnography
of the Neolithic bridges
this gap, giving an

accessible and up-to-date analysis of a wide range of evidence, from landscapes to monumental tombs to portable artifacts.

Christopher Tilley also uses this material as a basis for a provocative and novel reconstruction of late Mesolithic and earlier Neolithic societies in southern Scandinavia, over a period of 3,000 years. His skilful integration of archaeological evidence with new anthropological approaches makes this book an original

contribution to an important topic, whose significance stretches outside Scandinavia, and beyond the Neolithic.

“The” Stillwater Tragedy Cambridge University Press

Decision-making has been one of the principal victims of 'modern' thinking. The 'analytical' approach has, of course, brought us vaccines, electricity and the internal combustion engine. But, in seeking to break things down into their component parts and improve the parts,

governments and businesses continue to make some astonishingly bad decisions. What's more, many enterprises still pay close attention to 'decisions' and 'decision-making' whilst overlooking the bigger picture: the organizational system within which those decisions get made. This elegant book is a guide for any public, private, government or non-profit organization that needs a system for making better decisions. It sets out to change our 'analytical' habit and invites

enterprises to consider the bigger picture. Author Vince Barabba presents an elegantly simple approach to making better decisions. He calls this approach 'The Decision Loom' and bases it on Systems Thinking, Design Thinking and Complexity Theory. He also describes the four core capabilities that any organization must put in place for this approach to work. What's more (because we're humans and prefer stories to instruction manuals) the tapestry of the book is

embroidered with fascinating examples from the author's lifetime of experience at the head of American corporate and public decision-making. Annales du 17e Congrès de l'Association internationale pour l'histoire du verre ASP / VUBPRESS / UPA
"This book is your chance to learn from others' mistakes."-- Entrepreneur
In the 1960s, IBM CEO Tom Watson called an executive into his office after his venture lost \$10 million. The man assumed he was being fired.

Watson told him, "Fired? Hell, I spent \$10 million educating you. I just want to be sure you learned the right lessons." There are thousands of books about successful companies but virtually none about the lessons to be learned from those that crash and burn. Now Paul Carroll and Chunka Mui draw on research into more than 750 flameouts to reveal the seven biggest reasons for business failure. Billion Dollar Lessons New York : Free Press
Marxist theory has been an undercurrent in

western social science since the late nineteenth century. It came into prominence in the social sciences in the 1960s and 1970s and has had a profound effect on history, sociology and anthropology. This book represents an attempt to gather together Marxist perspectives in archaeology and to examine whether indeed they represent advances in archaeological theory. The papers in this volume look forward to the growing use of Marxist theory by archaeologists;

as well as enriching archaeology as a discipline they have important implications for sociology and anthropology through the addition of a long-term, historical perspective. This is a book primarily for undergraduates and research students and their teachers in departments of archaeology and anthropology but it should also be of interest to historians, sociologists and geographers. The 17th congress of the Association Internationale pour l'Histoire du Verre (AIHV), held in Antwerp, Belgium from 4 to 8 September 2006, brought together scholars from all over the world specialized in the history of glass. AIHV is an international organisation whose membership spans the globe, from Los Angeles to Tokyo and from Helsinki to Adelaide. Since its creation 50 years ago, AIHV members have studied and reported on the extraordinary development of glass in

all historical periods in the Annales of the AIHV. Next to containing numerous contributions on the use, manufacture and trade of glass in the Antique period, also the importance of glass in more recent historical periods, starting from the

15th century and ending in the 21st century, are dealt with in detail. Additionally, apart from contributions on stained glass, on glass decoration and the use of enamelling, a substantial series of papers dealing

with the chemical analysis of glass form part of this proceedings volume. -- Book Jacket.
