Meeting Standards Through Integrated Curriculum Letts and Lonsdale

This book contributes to the field of mathematical problem solving by exploring current themes, trends and research perspectives. It does so by addressing five broad and related dimensions: problem solving heuristics, problem solving and technology, inquiry and problem posing in mathematics education, assessment of and through problem solving, and the problem solving environment. Mathematical problem solving has long been recognized as an important aspect of mathematics, teaching mathematics, and learning mathematics. It has influenced mathematics curricula around the world, with calls for the teaching of problem solving as well as the teaching of mathematics through problem solving. And as such, it has been of interest to mathematics education researchers for as long as the field has existed. Research in this area has generally aimed at understanding and relating the processes involved in solving problems to students'

development of mathematical knowledge and problem solving skills. The accumulated knowledge and field developments have included conceptual frameworks for characterizing learners' success in problem solving activities, cognitive, metacognitive, social and affective analysis, curriculum proposals, and ways to promote problem solving approaches.

This timely book presents the latest scholarly research on the integration of Information Communications Technology (ICT) for enhanced STEM education in African schools and universities. Featuring critical discussion and illustration of key data-led arguments, this volume gives a comprehensive picture of the breadth, complexity, and diversity of issues present in different African countries. It highlights a diverse range of topics such as approaches to ICT integration, the use of digital technologies to support inquiry-based learning, teacher development, and contextual issues in ICT integration for STEM education. Chapters feature contributions and shared experiences from prominent science educators and researchers from across African regions, and demonstrate findings and reflections on emerging trends, pedagogical innovations, and research-informed practices on ICT integration in STEM education. Offering cutting-edge research on STEM and digital education in Africa, the book will appeal to researchers, postgraduate

students, and scholars in the fields of STEM education, ICT education, digital education, and pedagogy.

Living My Dream is a true-to-life story. The author takes us step-by-step through the events of his life from childhood in a tiny village of Greece to retirement in the USA and beyond. Occasionally, throughout the book and in his epilogue, he allows us to take a peek at his personal philosophy regarding God, truth, justice, science and our universe in general. Here, he introduces unconventional, yet convincing, ideas to support his philosophy. Most noticeable however is his candid and clear recounting of the events of poverty and hardship throughout his youth. At times, the story becomes almost incredible and we cannot help wonder whether or not those conditions existed indeed in the 1940s and 1950s when he grew up and attended high school, or at the time he worked and attend college at the same time. As a child and as a teenager, he lived through two civil wars and during the German occupation of the land that left him with lasting memories related to those dreadful events. He witnessed the worst form of human brutality perpetuated by men against their fellow men and he was the onlooker of death and destruction of property at the time he was trying to receive his elemental and high school education. He was not able or was not allowed to quench his thirst for higher education in Greece, and against all odds, he migrated to the USA to satisfy the desire for his college education. Without financial support and ignorant of the English language, he arrived in Chicago in 1959 and fought to finance his schooling and to receive his BA. He has been a member of the Food Technology Institute, recognized by Who's Who in America, and in addition to being chemist, he became Packaging Engineer by attending the packaging school of Michigan State University. Living My Dream is truly a compelling story narrating the life story of a young man who struggles to survive and to receive his education under unfavorable social climate. His life story is intertwined with his dream to accomplish things in life, regardless of the obstacles that presented themselves along the way, and is the incarnation of what he believes. "Everything is possible, if you have the desire, provided, your expectations from yourself are real", he says. To say the least, his narrative makes us appreciate all the freedoms and opportunities our democratic system offers to all of us, things we are taking for granted.
