"Ridley leaps from chromosome to chromosome in a handy summation of our ever increasing understanding of the roles that genes play in disease, behavior, sexual differences, and even intelligence. . . . He addresses not only the ethical quandaries faced by contemporary scientists but the reductionist danger in equating inheritability with inevitability." — The New Yorker The genome's been mapped. But what does it mean? Matt Ridley's *Genome* is the book that explains it all: what it is, how it works, and what it portends for the future Arguably the most significant scientific discovery of the new century, the mapping of the twenty-three pairs of chromosomes that make up the human genome raises almost as many questions as it answers. Questions that will profoundly impact the way we think about disease, about longevity, and about free will. Questions that will affect the rest of your life. *Genome* offers extraordinary insight into the ramifications of this incredible breakthrough. By picking one newly discovered gene from each pair of chromosomes and telling its story, Matt Ridley recounts the history of our species and its ancestors from the dawn of life to the brink of future medicine. From Huntington's disease to cancer, from the applications of gene therapy to the horrors of eugenics, Ridley probes the scientific, philosophical, and moral issues arising as a result of the mapping of the genome. It will help you understand what this scientific milestone means for you, for your children, and for humankind.

British Politics in the Age of Anne is a book that anyone with an interest in the period will wish to possess: completely authoritative, yet as attractive to the student and the general reader as to the specialist. The author has both revised the text and written a substantial new introduction to this edition. Geoffrey Holmes reveals how little the structure and contents of politics under Queen Anne had in common with the connexion-ridden scene of the mid-eighteenth century, as portrayed by Namier. He depicts a period of fierce and genuine party conflict, in which society at many levels was divided by great issues of principle and policy. Through frequent and hotly-contested elections and long parliamentary campaigns both Whigs and Tories enjoyed triumphs and suffered disasters. And while struggling against one another, each had to contend with internal factions and pressure-groups, the divisive thrust of personal ambitions and the hostility of the queen to single party rule. *British politics in the Age of Anne* is more than a major work of analysis and a historiographical landmark. By liberal use of quotation, eye for detail, sense of atmosphere and vivid character sketches of both leading and lesser personae, Professor Holmes recreates the unique political life of the high Augustan age.

You can choose several data access frameworks when building Java enterprise applications that work with relational databases. But what about big data? This hands-on introduction shows you how Spring Data makes it relatively easy to build applications across a wide range of new data access technologies such as NoSQL and Hadoop. Through several sample projects, you'll learn how Spring Data provides a consistent programming model that retains NoSQL-specific features and capabilities, and helps you develop Hadoop applications across a wide range of use-cases such as data analysis, event stream processing, and workflow. You'll also discover the features Spring Data adds to Spring's existing JPA and JDBC support for writing RDBMS-based data access layers. Learn

about Spring's template helper classes to simplify the use of database-specific functionality Explore Spring Data's repository abstraction and advanced query functionality Use Spring Data with Redis (key/value store), HBase (column-family), MongoDB (document database), and Neo4j (graph database) Discover the GemFire distributed data grid solution Export Spring Data JPA-managed entities to the Web as RESTful web services Simplify the development of HBase applications, using a lightweight object-mapping framework Build example big-data pipelines with Spring Batch and Spring Integration

In the late eleventh century, Sicily - originally part of the Islamic world - was captured by Norman, French and Italian adventurers, led by Roger de Hauteville. For the next 150 years, Roger and his descendants ruled the island and its predominantly Arabic-speaking Muslim population. Jeremy Johns' 2002 book represents a comprehensive account of the Arabic administration of Norman Sicily. While it has generally been assumed that the Normans simply inherited their Arabic administration from the Muslim governors of the island, the author uses the unique Sicilian Arabic documents to demonstrate that the Norman kings restructured their administration on the model of the contemporary administration of Fatimid Egypt. Controversially, he also suggests that, in doing so, their intention was not administrative efficiency but the projection of their royal image. This is a compelling and accessible account of the Norman rulers and how they related to their counterparts in the Muslim Mediterranean.

Caroline Kearney faced a heartbreaking dilemma. In 1865 she was newly widowed, thirty-one years old, and the mother of six children. She had hoped her husband would leave his sheep station in Victoria, Australia to her sons. Instead, his will required that the family move to Ireland and live in a house chosen by her brothers-in-law. Pieced together from archives, newspapers, genealogical sites, and legal records, *Caroline's Dilemma* sheds new light on colonial family and gender relationships of the nineteenth century and tells the story of how one woman fought to shape her own life within the British Empire.

A great modern classic and the prelude to *The Lord of the Rings*. Bilbo Baggins is a hobbit who enjoys a comfortable, unambitious life, rarely traveling any farther than his pantry or cellar. But his contentment is disturbed when the wizard Gandalf and a company of dwarves arrive on his doorstep one day to whisk him away on an adventure. They have launched a plot to raid the treasure hoard guarded by Smaug the Magnificent, a large and very dangerous dragon. Bilbo reluctantly joins their quest, unaware that on his journey to the Lonely Mountain he will encounter both a magic ring and a frightening creature known as Gollum. "A glorious account of a magnificent adventure, filled with suspense and seasoned with a quiet humor that is irresistible. . . . All those, young or old, who love a fine adventurous tale, beautifully told, will take *The Hobbit* to their hearts." - New York Times Book Review

Together with early theoretical work in population genetics, the debate on sources of genetic makeup initiated by proponents of the neutral theory made a solid contribution to the spectacular growth in statistical methodologies for molecular evolution. *Evolutionary Genomics: Statistical and Computational Methods* is intended to bring together the more recent developments in the statistical methodology and the challenges that followed as a result of rapidly improving sequencing technologies. Presented by top scientists from a variety of disciplines, the collection includes a wide spectrum of articles encompassing theoretical works and hands-on tutorials, as well as many reviews with key biological insight. Volume 2 begins with phylogenomics and continues with in-depth coverage of natural selection, recombination, and genomic innovation. The remaining chapters treat topics of more recent interest, including population genomics, -omics studies, and computational issues related to the handling of large-scale genomic data. Written in the highly successful *Methods in Molecular Biology*™ series format, this work provides the kind of advice on methodology and implementation that is crucial for getting ahead in genomic data analyses. Comprehensive and cutting-edge, *Evolutionary Genomics: Statistical and Computational Methods* is a treasure chest of state-of-the-art methods to study genomic and omics data, certain to inspire both young and experienced readers to join the interdisciplinary field of evolutionary genomics.

History of the Colony of New Haven Random House

Our day-to-day experiences over the past decade have taught us that there must be limits to our tremendous appetite for energy, natural resources, and consumer goods. Even utility and oil companies now promote conservation in the face of demands for dwindling energy reserves. And for years some biologists have warned us of the direct correlation between scarcity and population growth. These scientists see an appalling future riding the tidal wave of a worldwide growth of population and technology. A calm but unflinching realist, Catton suggests that we cannot stop this wave - for we have already overshot the Earth's capacity to support so huge a load. He contradicts those scientists, engineers, and technocrats who continue to write optimistically about energy alternatives. Catton asserts that the technological panaceas proposed by those who would harvest from the seas, harness the winds, and farm the deserts are ignoring the fundamental premise that "the principals of ecology apply to all living things." These principles tell us that, within a finite system, economic expansion is not irreversible and population growth cannot continue indefinitely. If we disregard these facts, our sagging American Dream will soon shatter completely.

Winner of the Dylan Thomas Prize 2018 *Winner of the Somerset Maugham Award 2018* 'A brilliant debut - a tender, nostalgic and, at times, darkly hilarious exploration of black boyhood, masculinity and grief. A gorgeous and necessary collection from one of my favourite writers' Warsan Shire Translating as 'initiation', kumukanda is the name given to the rites a young boy from the Luvale tribe must pass through before he is considered a man. The poems of Kayo Chingonyi's remarkable debut explore this passage: between two worlds, ancestral and contemporary; between the living and the dead; between the gulf of who he is and how he is perceived. Underpinned by a love of music, language and literature, here is a powerful exploration of race, identity and masculinity, celebrating what it means to be British and not British, all at once. *Shortlisted for the Costa Poetry Prize; Seamus Heaney Centre First Poetry Collection Prize; Ted Hughes Award for New Work in Poetry; Roehampton Poetry Prize; Jhalak Prize 2018*
