*Owning an Electric Car - 2010 Edition* IGI Global  
EDITORIAL: Gott zum Gruße zur nunmehr vierten Ausgabe von  
POETTSCHEKES POST aus dem intergalaktischen Raum. Die Welt  
ist alldieweil im Krisenmodus; während die Menschheit auch  
außerhalb unseres Planeten weitergehende  
Existenzmöglichkeiten erschließt. Der 1. FC Bayern München hat  
zum wiederholten Mal das Triple geholt - bestehend aus Gewinn  
der dt. Meisterschaft; DFB-Pokal und Championsleague. Geld  
regiert, wie es scheint den Fußball. Ist doch der FCB bis dato der  
finanzstärkste deutsche Fußballclub. Wobei zu sagen bleibt: Paris

St. Germain, der Bayern CL-Endspielgegner, hat international die  
meisten Moneten. So scheint ein bisschen sportlicher Ehrgeiz  
angestachelt gewesen zu sein, welchen die Bayern unter dem  
alles diktierenden Motto MIA SAN MIA, erfolgreich für sich  
entschieden. Das CL-Endspiel endete in Lissabon 1:0, wie wir alle  
wissen ... Was wir auch alle wissen, oder wissen sollten, ist, dass  
in unserem global-apokalyptischen Szenario durch Volkes Stimme  
demnächst tiefgreifende Änderungen auf dem Plan stehen:  
ANGELA MERKEL dankt bei der nächsten Bundestagswahl ab -  
soviel ist sicher. Wird der Chaot DONALD TRUMP bei der US-Wahl  
im November das Zepter zu Ungunsten von JOE BIDEN in der  
Hand behalten? ALLE FRAGEN FORDERN ANTWORTEN (Tork  
Poettschke). BESSER EIN GERUPFTES HUHN, ALS ÜBERHAUBT  
KEINE FEDERN ... Lassen Sie sich, lieber LeserIN, von

POETTSCHKES POST erneut dazu verleiten, den Blick über den Tellerrand zu wenden, sich von interessanten, zeitlos schönen Themen verführen. Von Fußball bis Weltuntergang! Was bleibt? Kleiner Scherz am Rande: "In einem kleinen Dorf gab es nur eine Kneipe und der Wirt war weit und breit der stärkste Mann. Er war so stark, dass sich bisher niemand gefunden hatte, der ihm das Wasser hätte reichen können. Deshalb hingte er in seiner Kneipe ein Schild auf, auf dem jedem eine Prämie von 1000 EURO angeboten wurde, der stärker wäre als der Wirt. Eines Tages kam ein schwächiger Mann in die Kneipe. Er las das Schild und bot dem Wirt an, seine Kräfte mit ihm zu messen. Der Wirt war einverstanden und holte eine Zitrone, quetschte sie aus, bis nur noch ein trockenes Etwas zurückblieb, und sprach zu dem Gast: "Wenn es Ihnen gelingt, auch nur einen Tropfen Saft aus dieser Zitrone zu quetschen, gehört Ihnen das Geld." Der Gast nahm die Zitrone, und drückte sie ohne sichtbare Anstrengung zusammen, und es kamen mehrere Tropfen Saft heraus. Als er sie losließ, zerfiel die Zitrone zu Staub. "Donnerwetter!", sagte der Wirt und überreichte ihm die 1000 EURO, "aber sagen Sie, sind Sie Ringer oder Gewichtheber oder so was?" "Nein, ich arbeite beim Finanzamt!" Hihi. Danke, dass Sie POEITTSCHKES POST lesen ... [Business India](#) McFarland

In this revelatory examination of the most overlooked force that is changing the face of China, the Oxford historian and scholar of modern Asia Karl Gerth shows that as the Chinese consumer goes, so goes the world. While Americans and Europeans have become increasingly worried about China's competition for manufacturing jobs and energy resources, they have overlooked an even bigger story: China's rapid development of an American-

style consumer culture, which is revolutionizing the lives of hundreds of millions of Chinese and has the potential to reshape the world. This change is already well under way. China has become the world's largest consumer of everything from automobiles to beer and has begun to adopt such consumer habits as living in large single-occupancy homes, shopping in gigantic malls, and eating meat-based diets served in fast-food outlets. Even rural Chinese, long the laggards of consumerism, have been buying refrigerators, televisions, mobile phones, and larger houses in unprecedented numbers. As China Goes, So Goes the World reveals why we should all care about the everyday choices made by ordinary Chinese. Taken together, these seemingly small changes are deeper and more profound than the headline-grabbing stories on military budgets, carbon emissions, or trade disputes.

In Strategic Management: Theory and Practice, Fourth Edition, John A. Parnell leads readers through detailed, accessible coverage of the strategic management field. Concise and easy to understand chapters address concepts sequentially, from external and internal analysis to strategy formulation, strategy execution, and strategic control. Rather than relegating case analysis to a chapter at the end of the book, Parnell aligns each chapter's key concepts with 25 case analysis steps. Current examples and high interest real-time cases, largely drawn from The Wall Street Journal and Financial Times, illustrate the key role of strategic management in the United States and around the world.

Volume One traces the history of Opel and Vauxhall separately from inception through to the 1970s and thereafter collectively to 2015. Special attention is devoted to examining innovative engineering features and the role Opel has taken of providing global platforms for GM. Each model is examined individually and supplemented by exhaustive supporting specification tables. The fascinating history of Saab and Lotus begins with their humble beginnings and examines each model in detail and looks at why these unusual marques came under the GM Banner. Included is a penetrating review of Saab through to its unfortunate demise. Volume Two examines unique models and variations of Chevrolet and Buick manufactured in the Southern Hemisphere and Asia but never offered in North America. Daewoo, Wuling and Baojun are other Asian brands covered in detail. This volume concludes with recording the remarkable early success of Holden and its continued independence through to today. Volume Three covers the smaller assembly operations around the world and the evolution of GM's export operations. A brief history of Isuzu, Subaru and Suzuki looks at the three minority interests GM held in Asia. The GM North American model specifications are the most comprehensive to be found in a single book. Global and regional sales statistics are included. GM executives and management from around the globe are listed with the roles they held. An index ensures that these volumes serve as the ideal reference source on GM.

*Cost, Effectiveness, and Deployment of Fuel Economy Technologies for Light-Duty Vehicles* Motorbooks International  
The light-duty vehicle fleet is expected to undergo substantial

technological changes over the next several decades. New powertrain designs, alternative fuels, advanced materials and significant changes to the vehicle body are being driven by increasingly stringent fuel economy and greenhouse gas emission standards. By the end of the next decade, cars and light-duty trucks will be more fuel efficient, weigh less, emit less air pollutants, have more safety features, and will be more expensive to purchase relative to current vehicles. Though the gasoline-powered spark ignition engine will continue to be the dominant powertrain configuration even through 2030, such vehicles will be equipped with advanced technologies, materials, electronics and controls, and aerodynamics. And by 2030, the deployment of alternative methods to propel and fuel vehicles and alternative modes of transportation, including autonomous vehicles, will be well underway. What are these new technologies - how will they work, and will some technologies be more effective than others? Written to inform The United States Department of Transportation's National Highway Traffic Safety Administration (NHTSA) and Environmental Protection Agency (EPA) Corporate Average Fuel Economy (CAFE) and greenhouse gas (GHG) emission standards, this new report from the National Research Council is a technical evaluation of costs, benefits, and implementation issues of fuel reduction technologies for next-generation light-duty vehicles. *Cost, Effectiveness, and Deployment of Fuel Economy Technologies for Light-Duty Vehicles* estimates the cost, potential efficiency improvements, and barriers to commercial deployment of technologies that might be employed from 2020 to 2030. This report describes these promising technologies and makes recommendations for

their inclusion on the list of technologies applicable for the 2017-2025 CAFE standards.

The aim of this new book series (Diatoms: Biology and Applications) is to provide a comprehensive and reliable source of information on diatom biology and applications. The first book of the series, *Diatoms Fundamentals & Applications*, is wide ranging, starting with the contributions of amateurs and the beauty of diatoms, to details of how their shells are made, how they bend light to their advantage and ours, and major aspects of their biochemistry (photosynthesis and iron metabolism). The book then delves into the ecology of diatoms living in a wide range of habitats, and look at those few that can kill or harm us. The book concludes with a wide range of applications of diatoms, in forensics, manufacturing, medicine, biofuel and agriculture. The contributors are leading international experts on diatoms. This book is for a wide audience researchers, academics, students, and teachers of biology and related disciplines, written to both act as an introduction to diatoms and to present some of the most advanced research on them.

In the past few years, interest in plug-in electric vehicles (PEVs)

has grown. Advances in battery and other technologies, new federal standards for carbon-dioxide emissions and fuel economy, state zero-emission-vehicle requirements, and the current administration's goal of putting millions of alternative-fuel vehicles on the road have all highlighted PEVs as a transportation alternative. Consumers are also beginning to recognize the advantages of PEVs over conventional vehicles, such as lower operating costs, smoother operation, and better acceleration; the ability to fuel up at home; and zero tailpipe emissions when the vehicle operates solely on its battery. There are, however, barriers to PEV deployment, including the vehicle cost, the short all-electric driving range, the long battery charging time, uncertainties about battery life, the few choices of vehicle models, and the need for a charging infrastructure to support PEVs. What should industry do to improve the performance of PEVs and make them more attractive to consumers? At the request of Congress, *Overcoming Barriers to Deployment of Plug-in Electric Vehicles* identifies barriers to the introduction of electric vehicles and recommends ways to mitigate these barriers. This report examines the characteristics and capabilities of electric vehicle technologies, such as cost, performance, range, safety, and durability, and assesses how these factors might create barriers to widespread deployment. *Overcoming Barriers to Deployment of Plug-in Electric Vehicles* provides an overview of the current status of PEVs and makes recommendations to spur the industry and increase the attractiveness of this promising technology for consumers. Through consideration of consumer behaviors, tax incentives, business models, incentive programs, and infrastructure needs,

this book studies the state of the industry and makes recommendations to further its development and acceptance.

As U.S. and Canadian automakers and dealers face bankruptcy and Toyota battles unprecedented quality-control problems, Lemon-Aid guides steer the confused and anxious buyer through the economic meltdown unlike any other car-and-truck books on the market. Phil Edmonston, Canada's automotive "Dr. Phil" for more than 40 years, pulls no punches. In this all-new guide he says: Chrysler's days are numbered with the dubious help of Fiat. Electric cars and ethanol power are PR gimmicks. Diesel and natural gas are the future. Be wary of "zombie" vehicles: Jaguar, Land Rover, Saab, and Volvo. Mercedes-Benz - rich cars, poor quality. There's only one Saturn you should buy. Toyota - enough apologies: "when you mess up, 'fess up."

All organizations must cope with future uncertainties. These uncertainties affect the strategic choices they make. They must commit scarce organizational resources to future outcomes which they have little assurance will come into being. Marcus explores how decision makers in the energy industry made choices in the face of such uncertainties, specifically examining two major uncertainties they confronted in the 2012-2018 period - price volatility and climate change. Marcus tells the story of how different companies in the integrated oil and natural gas sector and in the motor vehicle sector responded to these uncertainties. In the face of these challenges, companies in the energy industry hedged their bets by staking out paradoxical or contrasting positions. On the one hand, they focused on capturing as much gain as they could from the world's current dependence on fossil fuels and on the other hand they made preparations for a future in which fossil fuels might not be the world's dominant energy source.
