On the Swiss border with Austria in 1938, a police captain refuses to enforce a law barring Jewish refugees from entering his country. In the Balkans half a century later, a Serb from the war-blasted city of

Vukovar defies his superiors in order to save the lives of Croats. At the height of the Second Intifada, a member of Israel's most elite military unit informs his commander he doesn't want to serve in the occupied territories. Fifty years after Hannah Arendt examined the dynamics of conformity in her seminal account of the Eichmann trial, *Beautiful Souls* explores the flipside of the banality of evil, mapping out what impels ordinary people to defy the sway of authority and convention. Through the dramatic stories of unlikely resisters who feel the flicker of conscience when thrust into morally compromising situations, Eyal Press shows that the boldest acts of dissent are often carried out not by radicals seeking to overthrow the system but by true believers who cling with unusual fierceness to their convictions. Drawing on groundbreaking research by moral psychologists and neuroscientists, *Beautiful Souls* culminates with the story of a financial industry whistleblower who loses her job after refusing to sell a toxic product she rightly suspects is being misleadingly advertised. At a time of economic calamity and political

unrest, this deeply reported work of narrative journalism examines the choices and dilemmas we all face when our principles collide with the loyalties we harbor and the duties we are expected to fulfill.

Three-year-old Kwara'ae children in Oceania act as caregivers of their younger siblings, but in the UK, it is an

offense to leave a child under age 14 ears without adult supervision. In the Efe community in Zaire, infants routinely use machetes with safety and some skill, although U.S. middle-class adults often do not trust young children with knives. What explains these marked differences in the capabilities of these children? Until recently, traditional understanding s of human development

held that a child's development is universal and that children have characteristics and skills that develop independently of cultural processes.

Barbara Rogoff argues, however, that human development must be understood as a cultural process, not simply a biological or psychological one.

Individuals develop as members of a community, and their development can only be

fully understood by examining the practices and circumstances of their communities.

Scholastic UK How We Live Now is an inspiring guide to making the most of every square inch of your available space. When the housing market takes a dip, fewer of us move as we just can't afford it. That's the

time to take a long hard look at your home and work out how to make the most of every room – even every corner.

Perhaps you're trying to carve out more space to accommodate a growing family, or maybe you're wondering where you can squeeze in a home office, a utility room or a kids' playroom. Whatever your particular needs, in How We Live Now Rebecca Winward explores ways to make your

home work harder for you. She explores open-plan living, opting for more flexible room configurations, and using pockets of 'dead space' – under the stairs, on the landing or in the garden – that have unrecognized potential. Multi-tasking furniture and smart storage both have their role to play, as does versatile lighting. Streamline everyday life with *How We Live Now*. *Research into*

the Human Condition John Wiley & Sons
This book discusses what constitutes vocational education as well as its key purposes, objects, formation and practices. In short, it seeks to outline and elaborate the nature of the project of vocational education. It addresses a significant gap in the available literature by providing a single text that elaborates the scope and diversity of

the sector, its key objectives (i.e. vocations and occupations), its formation and development as an education sector, and the scope of its purposes and considerations in the curriculum. The volume achieves these objectives by discussing and defining the concept of vocational education as being that form of education that seeks to advise individuals

about, prepare them for, and further develop their capacities to perform the kinds of occupations that societies require and individuals need to participate in—and through which they often come to define themselves. In particular, it discusses the distinctions between occupations as a largely social fact and vocations as being a socially shaped outcome

assented to by individuals. As people identify closely with the kinds of occupations they engage in, the standing of, and the effectiveness of vocational education is central to individuals' well-being, competence and progress. Ultimately, this book argues that the provision of vocational education needs to realise important personal and social goals. Results

How does reading fiction affect young people? How can they transfer fictional experience into real life? Why do they care about fictional characters? How does fiction enhance young people's sense of self-hood? Supported by cognitive psychology and brain research, this ground-breaking book is the first study of young readers' cognitive and emotional

engagement with fiction. It explores how fiction stimulates perception, attention, imagination and other cognitive activity, and opens radically new ways of thinking about literature for young readers. Examining a wide range of texts for a young audience, from picturebooks to young adult novels, the combination of cognitive criticism and children's literature

theory also offers significant insights for literary studies beyond the scope of children's fiction. An important milestone in cognitive criticism, the book provides convincing evidence that reading fiction is indispensable for young people's intellectual, emotional and social maturation.
