Bridging the gap between wind and structural engineering, *Wind Loading of Structures* demonstrates the application of wind engineering principles to ensure maximum safety in a variety of structures. This book will assist the practising engineer in understanding the principles of wind engineering, and provide guidance on the successful design of structures for wind loading by gales, hurricanes, typhoons, thunderstorm downdrafts and tornados. The principles of meteorology, statistics and probability, aerodynamics and structural dynamics are covered in the first half of the book. The second half describes, qualitatively and quantitatively, the nature of wind loads on all types of structures, including low-rise and tall buildings, large stadium roofs, towers and chimneys, bridges, transmission lines, free-standing walls and roofs, and antennae. Special features include coverage of extreme winds in tropical and sub-tropical climates, wind-tunnel testing techniques, a summary of the wind climates of over sixty countries, and detailed coverage of internal as well as external wind pressures on buildings. A comparison is made of the provisions for wind loads in six major national and international codes and standards. Examples and case studies are given in each chapter that make the book suitable for supporting university graduate courses in wind loading and response.

This book provides the first academically rigorous description and critical analysis of the Higher Education system in the Kingdom of Saudi Arabia, and of the vision, strategies and policy imperatives for the future development of Saudi universities. The government of Saudi Arabia has recognized in both policy and practice the necessity of developing its university system to world-class standard. Significantly increasing access and participation in Higher Education across a range of traditional and non-traditional disciplines is directly relevant to the future social and economic growth of the country. This book addresses the way in which Saudi Arabia is moving to develop a quality university system that balances the need for students to gain the knowledge, skills and 'ways of doing' necessary to operate effectively on the world stage while simultaneously maintaining and demonstrating the fundamental values of the Islamic religion and culture. The book provides a description and critical analysis of the key components of the Saudi Higher Education system, and of system-level responses to the challenges and opportunities facing Saudi universities. It is written by a team of Saudi academics and authors of international standing from non-Saudi universities so as to provide both internal and external perspectives on all issues and to place information and ideas in the context of the international Higher Education scene.

Civil Engineer's Reference Book, Fourth Edition provides civil engineers with reports on design and construction practices in the UK and overseas. It gives a concise presentation of theory and practice in the many branches of a civil engineer's profession and it enables them to study a subject in greater depth. The book discusses some improvements in earlier practices, for example in surveying, geotechnics, water management, project

management, underwater working, and the control and use of materials. Other changes covered are from the evolving needs of clients for almost all forms of construction, maintenance and repair. Another major change is the introduction of new national and Euro-codes based on limit state design, covering most aspects of structural engineering. The fourth edition incorporates these advances and, at the same time, gives greater prominence to the special problems relating to work overseas, with differing client requirements and climatic conditions. Chapters 1 to 10 provide engineers, at all levels of development, with 'lecture notes' on the basic theories of civil engineering. Chapters 11 to 44 cover the practice of design and construction in many of the fields of civil engineering. Civil engineers, architects, lawyers, mechanical engineers, insurers, clients, and students of civil engineering will find benefit in the use of this text.

Saudi Arabia: Doing Business and Investing in ... Guide Volume 1 Strategic, Practical Information, Regulations, Contacts *Uniformity of Cement Strength* Oxford Business Group

Armies of Arabia is the first comprehensive analysis of the Gulf monarchies' armed forces, including their political, social, and economic characteristics, foreign relations, and battleground performance. The Arabian Peninsula is among the most strategically and economically important areas in the world, but its militaries remain terra incognita. In *Armies of Arabia* - the first book to comprehensively analyze the Gulf monarchies' armed forces - Zoltan Barany explains their notorious ineffectiveness with a combination of political-structural and sociocultural factors. Drawing on over 150 interviews and meticulous multidisciplinary research, Barany paints a fascinating portrait of Arabia's armies from Ibn Saud's Ikhwan to the present. He explores the methods ruling families employ to ensure their armies' loyalty, examines the backgrounds and career trajectories of soldiers and officers, and explains the monarchies' reliance on mercenaries and the enduring importance of tribal networks. Even though no other world region spends more on security, Arabia's armies remain ineffective because of an absence of meritocracy, the domination of personal connections over institutional norms, insipid leadership, a casual work ethic, and training that lacks intensity, frequency, and up-to-date scenarios. Massive weapons acquisitions are primarily pay-offs to the US for protecting them and have resulted in bloated and inappropriate arsenals and large-scale corruption. Barany explains why the Gulf Cooperation Council has been a squandered opportunity and examines the kingdoms' military relationships with the Arab world and beyond. The performance of the Saudi-led coalition's disastrous war in Yemen starkly illustrates the Gulf armies' humiliating combat record. The book concludes with thoughts on waste (of human

potential, resources, institutions) as a dominant theme of Gulf military affairs, considers likely changes in response to long-term weakening demand for oil, and suggests ways in which the armies' effectiveness could be raised. Chock-full of insights and stories from the field and written with a general audience in mind, *Armies of Arabia* will be essential reading for anyone interested in military affairs and Middle Eastern politics, society, and international relations.

This book discusses the strategic shift in ownership of Aramco, the Saudi Arabian Oil Company, and its potential impact on Aramco's role in a post-privatized world. Scheduled to become an IPO in 2018, Aramco is on the verge of becoming the largest IPO on the market. As the world's largest oil and gas company, Aramco's impending privatization has important implications for the world's petroleum market. This book, therefore, undertakes an analysis of Aramco, examining its history, its current role in Saudi Arabia's economy, and its future role as an IPO. The chapters highlight the likely outcomes for Aramco in proceeding with its planned IPO and privatization, as well as the various policy options and models available to it by drawing on the privatization of other national oil companies in Norway, Russia, Brazil, and China. The book also explores the complexities that will be involved in transforming Saudi Aramco to a privatized company—albeit with significant government oversight and control—and addresses key questions on the issues likely to be faced, such as IPO pricing, the listing, domain, and market capacity, and potential stakeholders. As such, this book will be of interest to academic researchers studying energy economics,

energy policy, and the political economy of the Middle East, as well as private sector decision makers in energy related fields, international organizations, international oil companies, energy commodity traders, and public sector energy policy makers with interest in Saudi Arabia and Aramco's IPO.
