Gerotranscendence Routledge

Loss can have many meanings from loss of family or friends, loss of something valued, a loss of an ability. This book discusses those losses, how we react to them and how we can adapt to them. It explores both the common themes and challenges that characterise the human experience of loss.

[The Psychology of Death](#) Oxford University Press

"This book is about dying, not about death. We are always dying a big, always giving things up, always having things taken away. Is there a person alive who isn't really curious about what dying is

for them? Is there a person alive who wouldn't like to go to their dying full of excitement, without fear and without morbidity? This books tells you how." -- Front cover.

[Encyclopedia of Death and the Human Experience](#) Prometheus Books

The star of "Long Island Medium" shares inspiring, spirit-based lessons on how to work through and overcome grief, in a guide that also offers example testimonies about the experiences of her clients

The Psychosocial Aspects of Death and Dying, 2nd Edition

Center for the Study of Loss &

For some, life's introduction to death and grief comes early, and when it does it can take many forms. Not only does Dealing with Dying, Death, and Grief during Adolescence tackle them all, it

does so with David Balk's remarkable sensitivity to and deep knowledge of the pressures and opportunities adolescents face in their transition from childhood to adulthood. In seamless, jargon-free language, Balk brings readers up to date with what we know about adolescent development, because over time such changes form the backstory we need to comprehend the impact of death and bereavement in an adolescent's life. The book's later chapters break down the recent findings in the study of life-threatening illness and bereavement during adolescence. And, crucially, these chapters also examine interventions that assist adolescents coping with these difficulties. Clinicians will come away from this book with both a grounded understanding of adolescent development and the adolescent experience of death, and they'll also gain specific tools for helping adolescents cope with death and grief on their own terms. For any clinician committed to supporting adolescents facing some of life's most difficult experiences, this integrated, up-to-date, and deeply insightful text is simply the book to have. David E. Balk is professor in the department of health and nutrition sciences at Brooklyn College (CUNY), where he directs the graduate program in thanatology. He is the author of *Adolescent Development: Early Through Late Adolescence*, *Helping the Bereaved College Student*, and several other books on death and bereavement. He is also co-editor of the 2nd edition of the *Handbook of Thanatology* (Routledge, 2013).

Psychosocial Issues in Palliative Care John Wiley & Sons

When the end of life makes its inevitable appearance, people should be able to expect reliable, humane, and effective caregiving. Yet too many dying people suffer unnecessarily. While

an "overtreated" dying is feared, untreated pain or emotional abandonment are equally frightening. *Approaching Death* reflects a wide-ranging effort to understand what we know about care at the end of life, what we have yet to learn, and what we know but do not adequately apply. It seeks to build understanding of what constitutes good care for the dying and offers recommendations to decisionmakers that address specific barriers to achieving good care. This volume offers a profile of when, where, and how Americans die. It examines the dimensions of caring at the end of life: Determining diagnosis and prognosis and communicating these to patient and family. Establishing clinical and personal goals. Matching physical, psychological, spiritual, and practical care strategies to the patient's values and circumstances. *Approaching Death* considers the dying experience in hospitals, nursing homes, and other settings and the role of interdisciplinary teams and managed care. It offers perspectives on quality measurement and improvement, the role of practice guidelines, cost concerns, and legal issues such as assisted suicide. The book proposes how health professionals can become better prepared to care well for those who are dying and to understand that these are not patients for whom "nothing can be done."

Lessons of Loss Springer Publishing Company

A Field Manual for Palliative Care in Humanitarian Crises represents the first-ever effort at educating and providing guidance for clinicians not formally trained in palliative care in how to incorporate its principles into their work in crisis situations. *A Field Manual for Palliative Care in Humanitarian Crises* represents the first-ever effort at educating and providing

guidance for clinicians not formally trained in palliative care in how to incorporate its principles into their work in crisis situations.

Psychological Maltreatment of Children Health Professions Press

The loss of a loved one is one of the most painful experiences that most of us will ever have to face in our lives. This book recognises that there is no single solution to the problems of bereavement but that an understanding of grief can help the bereaved to realise that they are not alone in their experience. Long recognised as the most authoritative work of its kind, this new edition has been revised and extended to take into account recent research findings on both sides of the Atlantic. Parkes and Prigerson include additional information about the different circumstances of bereavement including traumatic losses, disasters, and complicated grief, as well as providing details on how social, religious, and cultural influences determine how we grieve. Bereavement provides guidance on preparing for the loss of a loved one, and coping after they have gone. It also discusses how to identify the minority in whom bereavement may lead to impairment of physical and/or mental health and how to ensure they get the help they need. This classic text will continue to be of value to the bereaved themselves, as well as the professionals and friends who seek to help and understand them.

Palliative Psychology Charles Press Pubs(PA)

Ten years after the death of Elisabeth Kubler-Ross, this commemorative edition of her final book combines practical wisdom, case studies, and the authors' own experiences and spiritual insight to explain how the process of grieving helps us

live with loss. Includes a new introduction and resources section. Elisabeth Kubler-Ross's *On Death and Dying* changed the way we talk about the end of life. Before her own death in 2004, she and David Kessler completed *On Grief and Grieving*, which looks at the way we experience the process of grief. Just as *On Death and Dying* taught us the five stages of death--denial, anger, bargaining, depression, and acceptance--*On Grief and Grieving* applies these stages to the grieving process and weaves together theory, inspiration, and practical advice, including sections on sadness, hauntings, dreams, isolation, and healing. This is "a fitting finale and tribute to the acknowledged expert on end-of-life matters" (*Good Housekeeping*).

Good Grief New York : Springer Pub.

The death of a child is a special sorrow. No matter the circumstances, a child's death is a life-altering experience. Except for the child who dies suddenly and without forewarning, physicians, nurses, and other medical personnel usually play a central role in the lives of children who die and their families. At best, these professionals will exemplify "medicine with a heart." At worst, families' encounters with the health care system will leave them with enduring painful memories, anger, and regrets. When *Children Die* examines what we know about the needs of these children and their families, the extent to which such needs are "and are not" being met, and what can be done to provide more competent, compassionate, and consistent care. The book offers recommendations for involving child patients in treatment decisions, communicating with parents, strengthening the organization and delivery of services, developing support programs for bereaved families, improving public and private

insurance, training health professionals, and more. It argues that taking these steps will improve the care of children who survive as well as those who do not—and will likewise help all families who suffer with their seriously ill or injured child. Featuring illustrative case histories, the book discusses patterns of childhood death and explores the basic elements of physical, emotional, spiritual, and practical care for children and families experiencing a child's life-threatening illness or injury.

A Field Manual for Palliative Care in Humanitarian Crises National Academies Press

In this extensively updated and revised edition, Dr. Kastenbaum continues to examine and expand upon issues of dying and the ways in which we shape and reshape our conceptions of death. New to the Third Edition are chapters on how we construct death; Death in adolescence and adulthood including discussion on suicide, physician assisted death and Regret Theory and Denial; new approaches to the role of death anxiety, Terror Management Theory, and Edge Theory, and much more. A major contribution to the literature -- this book is must reading for professionals and students of psychology, thanatology, gerontology, social work, and those working in hospice care.

When Children Die Routledge

"Psychosocial Issues in Palliative Care is for anyone working the field of palliative care, both in the community and in hospitals; this includes those in medicine, nursing, social work, chaplaincy, counseling, primary care, and mental health."--Jacket.

This Republic of Suffering Springer

This empirically-based study of older adults ranging in age from 70-90 years examines the influence of family relations, religious

beliefs, age-related health changes, culture, and more on personal meanings of death, fears of death, and views of the dying process. Gerontologists will gain a more realistic understanding of all of the factors influencing an older individual's view of death and the dying process. These views impact the development of both effective interventions to provide appropriate emotional support and coping strategies to help persons deal with fears of approaching death.

Dying to be Men Springer Publishing Company

Revised edition of the best-selling memoir that has been read by over a million people worldwide with translations in 29 languages. After too many years of unfulfilling work, Bronnie Ware began searching for a job with heart. Despite having no formal qualifications or previous experience in the field, she found herself working in palliative care. During the time she spent tending to those who were dying, Bronnie's life was transformed. Later, she wrote an Internet blog post, outlining the most common regrets that the people she had cared for had expressed. The post gained so much momentum that it was viewed by more than three million readers worldwide in its first year. At the request of many, Bronnie subsequently wrote a book, *The Top Five Regrets of the Dying*, to share her story. Bronnie has had a colourful and diverse life. By applying the lessons of those nearing their death to her own life, she developed an understanding that it is possible for everyone, if we make the right choices, to die with peace of mind. In this revised edition of the best-selling memoir that has been read by over a million people worldwide, with translations in 29 languages, Bronnie expresses how significant these regrets are and how we can

positively address these issues while we still have the time. The Top Five Regrets of the Dying gives hope for a better world. It is a courageous, life-changing book that will leave you feeling more compassionate and inspired to live the life you are truly here to live.

How Different Religions View Death & Afterlife Vintage

`This second edition, which has also been edited by Samson Katz, utilizes around half of the original text, of which a significant portions has been revised and updated. The remainder comprises new material reflecting both the changes in attitudes generally towards death and dying, and also designed to meet the needs of students undertaking the revised curriculum of the K260. This book will stimulate thinking and challenge the personal views of both academics and those in practice. ...[A] valuable tool for both those new to the area of palliative and cancer care and those experienced professionals searching for a new angle on several key topics in relation to ethical issues occurring in this speciality... [A]n excellent balance of theoretical contents and moving prose... [T]his book is directed towards all professionals working in health and social care. ...This book is a must for pre-registration students wishing to gain greater understanding of the psychosocial issues faced by those with a terminal illness and their significant others' - Nurse Education Today The fully revised and updated edition of this bestselling collection combines

academic research with professional and personal reflections. Death, Dying and Bereavement addresses both the practical and the more metaphysical aspects of death. Topics such as new methods of pain relief, guidelines for breaking bad news, and current attitudes to euthanasia are considered, while the mystery of death and its wider implications are also explored. A highly distinctive interdisciplinary approach is adopted, including perspectives from literature, theology, sociology and psychology. There are wide-ranging contributions from those who come into professional contact with death and bereavement - doctors, nurses, social workers and councillors. In addition there are more intimate personal accounts from carers and from bereaved people. Death, Dying and Bereavement is the Course Reader for The Open University course Death and Dying, which is offered as part of The Open University Diploma in Health and Social Welfare. Praise for the First Edition: `The book does give a broad overview of many of the issues around death, dying and bereavement. It raises the reader's awareness and encourages deeper investigation at every level. It is easy to read and therefore accessible to a wide audience' - Changes `Provides a richly woven tapestry of personal, professional and literary accounts of death, dying and bereavement' - Health Psychology Update `Offers a unique collection of fascinating information, research, stories, poems and personal reflections. It is unusual to experience such a diversity of writings in one book' - Nursing Times `It brings together the knowledge and skills from a multi-occupational group and thereby offers an opportunity, to whoever reads it, to enable better experiences for those who are dying and bereaved' - Journal of Interprofessional Care `For those

trying to help the dying and bereaved, this volume will inspire and move you as much as it will inform and guide your work' - Bereavement Care `Provides a unique overview, and in many areas, penetrating insights into various aspects of death, dying and bereavement. One of it's major strengths is that it brings together a wide and varied discourse on death across cultures and through time' - British Journal of Sociology

Transitions in Dying and Bereavement SAGE Publications
Cancer care today often provides state-of-the-science biomedical treatment, but fails to address the psychological and social (psychosocial) problems associated with the illness. This failure can compromise the effectiveness of health care and thereby adversely affect the health of cancer patients. Psychological and social problems created or exacerbated by cancer-including depression and other emotional problems; lack of information or skills needed to manage the illness; lack of transportation or other resources; and disruptions in work, school, and family life-cause additional suffering, weaken adherence to prescribed treatments, and threaten patients' return to health. Today, it is not possible to deliver high-quality cancer care without using existing approaches, tools, and resources to address patients' psychosocial health needs. All patients with cancer and their families should expect and receive cancer care that ensures the provision of appropriate psychosocial health services. Cancer Care for the Whole Patient recommends actions that oncology providers, health policy makers, educators, health insurers, health planners, researchers and research sponsors, and consumer advocates should undertake to ensure that this standard is met.

Dying to Live Simon and Schuster

Given the 2006 GREAT GERONTOLOGY AWARD for outstanding contribution to gerontological research by the Swedish Gerontological Society Received a VALUE GROUND AWARD from the journal Aldreomsorg (Old Age Care) Expanding upon his earlier writings, Dr. Tornstam's latest book explores the need for new theories in gerontology and sets the stage for the development of his theory of gerotranscendence. This theory was developed to address what the author sees as a perpetual mismatch between present theories in social gerontology and existing empirical data. The development towards gerotranscendence can involve some overlooked developmental changes that are related to increased life satisfaction, as self-described by individuals. The gerotranscendent individual typically experiences a redefinition of the Self and of relationships to others and a new understanding of fundamental existential questions: The individual becomes less self-occupied and at the same time more selective in the choice of social and other activities. There is an increased feeling of affinity with past generations and a decreased interest in superfluous social interaction. The individual might also experience a decrease in interest in material things and a greater need for solitary "meditation.â Positive solitude becomes more important. There is also often a feeling of cosmic communion with the spirit of the universe, and a redefinition of time, space, life and death. Gerotranscendence does NOT imply any state of withdrawal or disengagement, as sometimes erroneously believed. It is not the old disengagement theory in new disguise. Rather, it is a theory that describes a developmental pattern beyond the old dualism

of activity and disengagement. The author supports his theory with insightful qualitative in-depth interviews with older persons and quantitative studies. In addition, Tornstam illustrates the practical implications of the theory of gerotranscendence for professionals working with older adults in care settings. A useful Appendix contains suggestions of how to facilitate personal development toward gerotranscendence. For Further Information, Please Click Here!

[The Psychosocial Aspects of Death and Dying](#) Hay House, Inc
Arguing that death is the central force shaping our social life and order, Michael Kearl draws on anthropology, religion, politics, philosophy, the natural sciences, economics, and psychology to provide a broad sociological perspective on the interrelationships of life and death, showing how death contributes to social change and how the meanings of death are generated to serve social functions. Working from a social as well as a psychological perspective, Kearl analyzes traditional topics, including aging, suicide, grief, and medical ethics while also examining current issues such as the impact of the AIDS epidemic on social trust, governments' use of death symbolism, the business of death and dying, the political economy of doomsday weaponry, and death in popular culture. Incisive and original, this book maps the

separate contributions of various social institutions to American attitudes toward death, observing the influence of each upon the broader cultural outlook on life.

Top Five Regrets of the Dying Vintage

"The book is well organized, well detailed, and well referenced; it is an invaluable sourcebook for researchers and clinicians working in the area of bereavement. For those with limited knowledge about bereavement, this volume provides an excellent introduction to the field and should be of use to students as well as to professionals," states Contemporary Psychology. The Lancet comments that this book "makes good and compelling reading....It was mandated to address three questions: what is known about the health consequences of bereavement; what further research would be important and promising; and whether there are preventive interventions that should either be widely adopted or further tested to evaluate their efficacy. The writers have fulfilled this mandate well."
