The Model Rules of

Professional Conduct provides an up-to-date resource for information on legal ethics. Federal, state and local courts in all jurisdictions look to the Rules for guidance in solving lawyer malpractice cases, disciplinary actions, disqualification issues, sanctions questions and much more. In this volume, black-letter Rules of Professional Conduct are followed by numbered Comments

that explain each Rule's purpose and provide suggestions for its practical application. The Rules will help you identify proper conduct in a variety of given situations, review those instances where discretionary action is possible, and define the nature of the relationship between you and your clients, colleagues and the courts.

The use of online learning environments is now widespread, and there is a wealth of literature providing practical advice on how to teach online, develop courses and ensure effective pedagogical practice. What has been frequently overlooked is the insight offered by cyberspace theory, which considers broader social, cultural and

theoretical contexts within which new technologies and learning models are situated. This book provides a fresh perspective on current thinking in e-learning. It challenges orthodox assumptions about the role of technology in the teaching and learning of the future, and explores more varied and wider-reaching conceptual frameworks for learning in cyberspace. Featuring the

contributions of respected and experienced experts with a wide range of perspectives, Education in Cyberspace will be valued by anyone closely involved in the theory of e-learning and education. **Monthly Catalogue, United States Public Documents** Springer Title 7, Agriculture, Parts 1600-1759 **The Code of Federal Regulations of the United States of America** CCH

Section II focuses on philosophical analyses of the concept of expertise, asking, among

other things, how it should be understood, how it can be acquired, and what such expertise warrants. Finally, section III addresses topics in bioethics and how ethics expertise should or should not be brought to bear in these areas, including expertise in the courtroom, in the hospital room, in the media, and in making policy. 2. A GUIDED HISTORICAL TOUR As Scott

LaBarge points out, Plato's dialogues can be viewed as an extended treatment of the concept of moral expertise, so it is fitting to begin the volume with an examination of "Socrates and Moral Expertise". Given Socrates' protestations (the Oracle at Delphi notwithstanding) that he knows nothing, LaBarge observes that it would be interesting to determine

both what a Socratic theory of moral expertise might be and whether Socrates qualified as such an expert. Plato's model of moral expertise is what LaBarge calls "demonstrable expertise", which is concerned mainly with the ability to attain a goal and to explain how one did it. The problem with this account is that when one tries to solve the various problems in

the model – for example, allowing that moral expertise is not an all-or-nothing skill – then one is immediately faced with the “credentials problem”. As LaBarge puts it, “. . .

 This study recapitulates basic developments in the tradition of hermeneutic and phenomenological studies of science. It focuses on the ways in which scientific

research is committed to the universe of interpretative phenomena. It treats scientific research by addressing its characteristic hermeneutic situations, and uses the following basic argument in this treatment: By demonstrating that science’s epistemological identity is not to be spelled out in terms of objectivism, mathematical essentialism, representationism, and foundationalism, one

undermines scientism without succumbing to scientific research to “procedures of normative-democratic control” that threaten science’s cognitive autonomy. The study shows that in contrast to social constructivism, hermeneutic phenomenology of scientific research makes the case that overcoming scientism does not imply restrictive policies regarding the constitution of

scientific objects. *U.S. Taxation of Foreign Persons and Foreign Income* American Bar Association The use of online learning environments is now widespread, and there is a wealth of literature providing practical advice on how to teach online, develop courses and ensure effective pedagogical practice.
