Developed in partnership with the National Ski Patrol, Outdoor Emergency Care: A Patroller's Guide to Medical Care, Sixth Edition, is designed to prepare first responders to handle any medical situation in the outdoor environment, during all seasons. The Sixth Edition features: A straightforward, consistent patient assessment process. The patient assessment process is presented in the same way patients are assessed in the health care system. Flowcharts are provided throughout the Patient Assessment chapter to keep the reader focused on each step of the process. Up-to-date content. As you read through each chapter, you will find new information that is current with present prehospital patient care. Subject matter that meets and, in many cases, exceeds the National Emergency Medical Responder criteria. Information unique for ski and bicycle patrollers, including extrication, is included. This material is presented in a format that combines the disciplines of urban EMS and wilderness medical rescue. Continuous case studies. A continuous case study is included in each chapter to encourage critical thinking and application of the information as readers progress through the chapter. End-of-chapter review questions. The review questions included at the end of each chapter allow students to evaluate the knowledge they have gained while reading the chapter. Focus on learning objectives. Specific objectives listed at the beginning of each chapter tell students at the outset what they are expected to learn as they move through the chapter.

Psychological first aid, or PFA, is designed to mitigate the effects of acute stress and trauma and assist those in crisis to cope effectively with adversity. PFA is designed to be applied in emergencies, including disasters and terrorist attacks. In this essential guide, George S. Everly, Jr., developer of the Johns Hopkins RAPID PFA method, and Jeffrey M. Lating, his collaborator in its implementation, describe the principles and practices underpinning this psychological model in an easy-to-follow, prescriptive, and practical manner. They explain the history of PFA and persuasively demonstrate its powerful versatility. Mental health practitioners can apply PFA in all settings. It can also be used as a public-health tool to address mental health needs following critical incidents and as a means for building community resilience. Aimed at mental health practitioners, all first responders, and global health disaster teams such as Médecins Sans Frontières and the World Health Organization, The Johns Hopkins Guide to Psychological First Aid is the first book to thoroughly explain RAPID PFA. RAPID, a unique theoretically grounded and evidence-based PFA method, follows a set of easily understood principles. In each chapter, Everly and Lating provide a step-by-step approach and include a key point summary to emphasize essential elements. A unifying case exemplifies each phase of the RAPID PFA model in an ongoing dialogue that presents ideal PFA responses, examples of common mistakes, and various outcomes. In addition to their counseling experience in Kuwait after the Gulf War and in New York City after the September 11 attacks, the authors have traveled nationally and internationally to teach the RAPID PFA method in numerous public health, fire, police, military, and faith-based settings. Beneficial to those with little or no previous mental health training, this book is an essential tool for people who want to learn, to practice, or to retain their ability to use psychological first aid effectively.
