 Stemming from environmental, genetic, and situational factors, chronic disease is a critical concern in modern medicine. Managing treatment and controlling symptoms is imperative to the longevity and quality of life of patients with such diseases. *Chronic Illness and Long-Term Care: Breakthroughs in Research and Practice* features current research on the diagnosis, monitoring, management, and treatment of chronic diseases such as

diabetes, Parkinson's disease, autoimmune disorders, and many more. Highlighting a range of topics such as medication management, quality-of-life issues, and sustainable health, this publication is an ideal reference source for hospital administrators, healthcare professionals, academicians, researchers, and graduate-level students interested in the latest research on chronic diseases and long-term care. Plants are not just a pretty part of the landscape; they keep the entire planet, with all of its human and nonhuman inhabitants, alive. Stanley Rice documents the many ways in which plants do this by making oxygen, regulating the greenhouse effect, controlling floods, and producing all the food in the world. Plants also create natural habitats for all organisms in the world. With illustrations and

clear writing for non-specialists, Green Planet helps general readers realize that if we are to rescue the Earth from environmental disaster, we must protect wild plants. Beginning with an overview of how human civilization has altered the face of the Earth, particularly by the destruction of forests, the book details the startling consequences of these actions. Rice provides compelling reasons for government officials, economic leaders, and the public to support efforts

to save threatened and endangered plants. Global campaigns to solve environmental problems with plants, such as the development of green roofs and the Green Belt Movement—a women's organization in Kenya that empowers communities worldwide to protect the environment—show readers that efforts to save wild plants can be successful and beneficial to the economic well-being of nations. Through current scientific evidence, readers see that plants are vital to the

ecological health of our planet and understand what can be done to lead to a better—and greener—future Benefits of plants: Help modulate greenhouse gases Produce almost all oxygen in the air Create cool shade that reduces energy costs Prevent floods, droughts, and soil erosion Produce all of the food in the world Create and preserve soil Create natural habitats Heal the landscape after natural and human disasters

 Pulp and paper mill industries are always associated with the disposal problem of highly contaminated sludge or bio-solids. The development of innovative systems to maximize recovery of useful materials and/or energy in a sustainable

way has become necessary. The management of wastes, in particular of industrial waste, in an economically and environmentally acceptable manner is one of the most critical issues facing modern industry, mainly due to the increased difficulties in properly locating disposal works and complying with even more stringent environmental quality requirements imposed by legislation. This book presents a general Introduction on waste management in the pulp

and paper industry and contains topics on the generation of waste in pulp and paper mills, waste composition, methods of sludge pre-treatment, processes and technologies for conversion of pulp and paper mill waste into valuable products, waste reduction techniques employed in the pulp and paper Industry worldwide and future trends. *Angkor Wat - A Transcultural History of Heritage* Springer Science & Business Media

Examines the social, cultural and ethical dimensions of heritage research and practice, and the underlying international politics of protecting cultural and natural resources around the globe. Focuses on ethnographic and embedded perspectives,

as well as a commitment to ethical engagement Appeals to a broad audience, from archaeologists to heritage professionals, museum curators to the general public The contributors comprise an outstanding team, representing some of the most prominent scholars in this broad field, with a combination of senior and emerging scholars, and an emphasis on international contributions Lamborghini IGI Global Functioning of the Multinational Corporation:

A Global Comparative Study is a collection of papers that discusses the roles played by multinational corporation in addressing societal problems. The title outlines and analyzes the issues and conflicts between multinational corporations and states. The text first covers the concept of multinational corporations. Next, the selection tackles global issues, such as economic independence, socio-cultural impact of transnational enterprises, and transfer-pricing

problems. The text also deals with strategies, policy making, and organizational adaptability of multinational corporations. In the last part, the title analyzes the individuals who manage multinational corporations in terms of their backgrounds, education, training, and outlook. The book will be of great interest to sociologists, political scientists, economists, and behavioral scientists.

This international symposium allowed many researchers and industrial representatives to meet and discuss a broad spectrum of information such as zero emission, resources availability,

sustainable utilization of resources, bioactive and functional components in aquatic organisms, utilization of wastes, seafood quality, surimi technologies and processing and safety. The book aims: To provide a current record presented in the international symposium More Efficient Utilization of Fish and Fisheries Products, 7-10 October 2001, Kyoto, Japan; To provide a stimulus to researchers in this area to cross-fertilize ideas and demonstrate examples of

success; To enhance values and returns to fisheries fields in national and international terms by providing descriptions of better techniques and methods for utilizing the catch, reducing waste, and providing valuable by-products.

What does it take to manage an organization to success? No matter what industry you are in, an organization is primarily a group of people. This book focuses on that ever-important

human element. In the rush to get 'lean', many organizations focus solely on tools for increasing productivity, but where do these tools come from? In this book, Collin McLoughlin and Toshihiko Miura look back on their decades of international consulting experience to examine how organizations around the world have transformed on a cultural level by respecting the people who work within them and leveraging their creativity to solve problems. As our workforce becomes more

knowledgeable, skillful, and more perceptive of their needs and wants as employees, the ability to reach the true potential of an organization becomes more and more difficult. Managers must look at each individual element of an equation like this in order to fully understand how to achieve an answer. They must begin to answer more focused questions, such as: 1. How productive is the existing work climate and culture? 2. How do employees, as individuals, navigate the existing work

climate? (How do they deal with day-to-day issues with each other?) 3. Where and how are individuals and their work processes assessed? 4. What obstacles do employees face every day, and are they empowered to fix these obstacles? 5. What role does leadership play at each level of the organization? (Looking at the organization in layers of management.) To address these challenges, this book focuses on three main aspects of leadership and

management: 1. Addressing and Improving the Perspective of Management -- The ideas presented in this book are not limited to a certain industry or field of work, but can be applied in any setting because they speak to a universal human element. 2. Exploring and Improving Work Climate -- Organizations are social entities, operating within their own controlled environment. This book will explore the factors that contribute to, and encourage, a positive

work climate. 3. Observing and Eliminating Wasteful Work Processes - - Observing wasteful activities and work processes requires a refined perspective. The case studies presented illustrate the How and Why to help refine expertise. This will also lead to the joy and benefits *High Performance Computing and Communications* Routledge The practice and perceptions of Japanese management are

undergoing fundamental change. This book sets out to identify the essential currents of change and explain how and why these impinge on the experience of managers in Japan. Governance Security With Deep Learning Applications provides a timely and indispensable solution to these pressing concerns. This comprehensive book takes a global perspective, exploring the integration of intelligent systems with cybersecurity applications to protect deep learning models and ensure the secure functioning of e-governance systems. By delving into cutting-edge techniques and methodologies, this book equips scholars,

researchers, and industry experts with the knowledge and tools needed to address the complex security challenges of the digital era. The authors shed light on the current state-of-the-art methods while also addressing future trends and challenges. Topics covered range from skill development and intelligence system tools to deep learning, machine learning, blockchain, IoT, and cloud computing. With its interdisciplinary approach and practical insights, this

book serves as an invaluable resource for those seeking to navigate the intricate landscape of e-governance security, leveraging the power of deep learning applications to protect data and ensure the smooth operation of government systems.

Chronic Illness and Long-Term Care: Breakthroughs in Research and Practice

This book investigates what has constituted notions of "archaeological heritage" from colonial

times to the present. It includes case studies of sites in South and Southeast Asia with a special focus on Angkor, Cambodia. The contributions, the subjects of which range from architectural and intellectual history to historic preservation and restoration, evaluate historical processes spanning two centuries which saw the imagination and production of "dead archaeological ruins" by often overlooking living local, social, and ritual

forms of usage on site. Case studies from computational modelling in archaeology discuss a comparable paradigmatic change from a mere simulation of supposedly dead archaeological building material to an increasing appreciation and scientific incorporation of the knowledge of local stakeholders. This book seeks to bring these different approaches from the humanities and engineering sciences into a trans-disciplinary discussion.

Hollywood Music Industry Directory Elsevier Religion and spirituality have been scarcely addressed in heritage preservation history, discourse, and practice. More recently, increased interest in the intersections between the study of religion and heritage preservation in both academic studies and institutional initiatives highlight obstacles that the field has yet to overcome theoretically and methodologically. This Element surveys the convergences of religious

and heritage traditions. It argues that the critical heritage turn has not adequately considered the legacy of secularism that underpins the history and contemporary practices of heritage preservation. This omission is what has left the field of heritage studies ill-equipped to support the study and management of a heritage of religion broadly construed.

2020 with the history of Lamborghini. This official book is dedicated to the history of the Italian car brand founded in Sant'Agata Bolognese in 1963 by Ferruccio Lamborghini. Ferruccio's dream was to create the perfect car and still today, more than half a century later, Lamborghini continues to produce super sport cars that are sought after and renowned throughout the world. The book is divided into five macro-sections: Where: In Sant'Agata Bolognese, Emilia, Italy - a

small remote village now known throughout the world. How: With the ingredients that make it unique - the passion of the local people, mechanical purity and unstoppable technical innovation, forward-looking design, stylish and original use of color and a constant dialogue with new generations. Who: Lamborghini's strength is its people, from the past and the present, who deserve respect for what they do and what they have done. When: The history of Lamborghini

spans from 1963 to today, from the brilliant moments from the past to the successes of today, as well as the more difficult periods that were overcome with great dignity and commitment. Why: All the models that have shaped the history of Lamborghini are illustrated here, including special editions, those that underwent significant evolution and unreleased models.

"Angkor, the temple and palace complex of the ancient Khmer capital in Cambodia is one of the world's most famous monuments. Hundreds of thousands of tourists from all over the globe visit Angkor Park, one of the finest UNESCO World Heritage Sites, every year. Since its UNESCO listing in 1992, the Angkor region has experienced an overwhelming mushrooming of hotels and restaurants; the infrastructure has been hardly able to cope

with the rapid growth of mass tourism and its needs. This applies to the access and use of monument sites as well. The authors of this book critically describe and analyse the heritage nomination processes in Cambodia, especially in the case of Angkor and the temple of Preah Vihear on the Cambodian/Thai border. They examine the implications the UNESCO listings have had with regard to the management of Angkor Park and its inhabitants on the one hand, and to the

Cambodian/Thai relationships on the other. Furthermore, they address issues of development through tourism that UNESCO has recognised as a welcome side-effect of heritage listings. They raise the question whether development through tourism deepens already existing inequalities rather than contributing to the promotion of the poor"-- Publisher's description.
