Workloads Running on Multicores Abstract: Multimedia data has become a major data type in the Big Data era. The explosive volume of such data and the increasing real-time requirement to retrieve useful information from it have put significant pressure in processing such data in a timely fashion. Performance Analysis of Multimedia Retrieval Workloads ...The prototype distributed information retrieval system is based on Inquiry, an existing, unified IR system. We have implemented a flexible simulation model to serve as a platform for analyzing performance issues given a wide variety of system parameters and configurations. Performance Analysis of Distributed Information Retrieval ...The analysis above revealed that EC-CLIR using the LKB achieved better retrieval performance than that using the LDC dictionary, and the translation using the LKB was better as well. Superficially, a correlation between the difference in EC-CLIR performance and the percentage difference in correct, incorrect and missing translations can

be expected. Toward a unified retrieval outcome analysis framework for ...In this paper, we systematically investigate the various problems and issues associated with the use of recall and precision as measures of retrieval system performance. Our motivation is to provide a comparative analysis of methods available for defining precision in a probabilistic sense and to promote a better understanding of the various issues involved in retrieval performance evaluation. A critical investigation of recall and precision as ...Retrieval Systems1 (Query Performance Analyser - QPA for short). QPA is a tool developed for the performance analysis and visualisation of individual queries. In experimental research, QPA helps detailed analysis of test results - the variation of performance in queries formulated and reformulated for a given topic. A query performance analyser - a tool for information ...It was the aim of this study to investigate the in vivo performance of this new design, by comparing it with its predecessors in retrieval analysis. METHODS: 24 PFC (18 fixed bearing and 6

rotating platform designs) and 17 Attune (8 fixed bearing and 9 rotating platform designs) implants were retrieved. Retrieval analysis of contemporary antioxidant ...The compact binary codes representing the fused features form the multibiometric database on which the retrieval performance is analyzed. Simulation results obtained indicate that the hit rate and penetration rate have improved considerably for the desired recognition accuracy.
