Between 1988 & 1993 over fifty nations have either enacted new mining legislation, had such legislation pending adoption or were in the process of drafting new or revised legislation. In almost every case, this legislation carried with it changes in the fiscal regimes. The ability to attract mineral investment, be it in either a developed or a developing country, is partly dependent on the legislative & fiscal systems which regulate the industry. In the light of the changes taking place, this new reference work is timely & provides essential reading for those with an interest in mining taxation. The first part of the book analyses general topics which are applicable to understanding the taxation of mineral enterprises, while the second part provides a comprehensive & detailed account of actual taxation systems & methods.

This book, first published in 1987, examines the elements that constitute the French identity through the experience of the Second World War – a constant point of reference, a landmark to which the collective consciousness returns again and again. The Occupation period and the national humiliation of the French military and political collapse has been perceived as more than a series of traumatic events, and in fact as a reality of mythical proportions that became a symbol of something grander, French identity itself.

Nestled in a spectacular botanical garden with stunning views on the Mediterranean, the idyllic Hotel du Cap-Eden-Roc has attracted scintillating international guests for 150 years. First created in the nineteenth century as a retreat for artists and writers, the Hotel du Cap-Eden-Roc at Cap d'Antibes continues to captivate an international clientele as an exclusive retreat today. The tropical paradise attracted writers such as Ernest Hemingway and F. Scott Fitzgerald, whose Tender Is the Night was set at Eden Roc. Artists--including Monet, Matisse, Chagall, Picasso, Damien Hirst, and Bernar Venet--have drawn inspiration from the enchanted setting. Master photographers such as Jacques Henri Lartigue and Slim Aarons famously captured guests splashing in the Mediterranean or lounging in the sun next to the iconic seawater swimming pool carved in the basalt cliff. The secluded resort, located between Nice and Cannes, has always been a favorite haven on the French Riviera for A-list celebrities--from Marlene Dietrich to Orson Welles, and from John Lennon and Yoko Ono to Sharon Stone--during the Cannes film festival, and for secluded family holidays. The hotel's long and fascinating history is full of romance, humor, mystery, and

legend. Built on one of the most alluring sites on the Riviera, the Hotel du Cap-Eden-Roc is the epitome of beauty, timeless elegance, and discretion, and has been a home away from home for generations of artists, photographers, authors, politicians, and Hollywood stars.

Judge Falcone, who led the war against the Mafia in Italy, was assassinated with his wife and three bodyguards in a car-bomb explosion in May 1992 - just as he was to be given powers to investigate the organization nationally. Written the previous year, this is his account of the Mafia.

Galois theory has such close analogies with the theory of coverings that algebraists use a geometric language to speak of field extensions, while topologists speak of "Galois coverings". This book endeavors to develop these theories in a parallel way, starting with that of coverings, which better allows the reader to make images. The authors chose a plan that emphasizes this parallelism. The intention is to allow to transfer to the algebraic framework of Galois theory the

geometric intuition that one can have in the context of coverings. This book is aimed at graduate students and mathematicians curious about a non-exclusively algebraic view of Galois theory.

This book presents a comprehensive and systematic introduction to transforming process-oriented data into information about the underlying business process, which is essential for all kinds of decision-making. To that end, the authors develop step-by-step models and analytical tools for obtaining high-quality data structured in such a way that complex analytical tools can be applied. The main emphasis is on process mining and data mining techniques and the combination of these methods for process-oriented data. After a general introduction to the business intelligence (BI) process and its constituent tasks in chapter 1, chapter 2 discusses different approaches to modeling in BI applications. Chapter 3 is an overview and provides details of data provisioning, including a section on big data. Chapter 4 tackles data description, visualization, and reporting. Chapter 5 introduces data mining techniques for cross-sectional data. Different techniques for the analysis of temporal data are then detailed in Chapter 6. Subsequently, chapter 7 explains techniques for the analysis of process data, followed by the introduction of analysis techniques for multiple BI perspectives in chapter 8. The book closes with a summary and discussion in chapter 9. Throughout the book, (mostly open source) tools are recommended, described and applied; a more

detailed survey on tools can be found in the appendix, and a detailed code for the solutions together with instructions on how to install the software used can be found on the accompanying website. Also, all concepts presented are illustrated and selected examples and exercises are provided. The book is suitable for graduate students in computer science, and the dedicated website with examples and solutions makes the book ideal as a textbook for a first course in business intelligence in computer science or business information systems. Additionally, practitioners and industrial developers who are interested in the concepts behind business intelligence will benefit from the clear explanations and many examples.
