This book assesses the role of the doctrine of insurable interest within modern insurance law by examining its rationales and suggesting how shortcomings could be fixed. Over the centuries, English law on insurable interest – a combination of statutes and case law – has become complex and unclear. Other jurisdictions have relaxed, or even abolished, the requirement for an insurable interest. Yet, the UK insurance industry has overwhelmingly supported the retention of the doctrine of insurable interest. This book explores whether the traditional justifications for the doctrine – the policy against wagering, the prevention of moral hazard and the doctrine's relationship with the indemnity principle – still stand up to scrutiny and argues that, far from being obsolete, they have acquired new significance in the global financial markets and following the liberalisation of gambling. It is also argued that the doctrine of insurable interest is an integral part of a system of insurance contract law rules and market practice. Rather than rejecting the doctrine, the book recommends a recalibration of insurable interest to afford better pre-contractual transparency to a proposer as to the suitability of the policy to his or her interest in the subject-matter to be insured. Providing a powerful defence for the retention of insurable interest, this book will appeal to both academics and practitioners working in the field of insurance law.

The York-Antwerp Rules: The Principles and Practice of General Average Adjustment Informa Law from Routledge

This book provides an authoritative insight on the Loss and Damage discourse by highlighting state-of-the-art research and policy linked to this discourse and articulating its multiple concepts, principles and methods. Written by leading researchers and practitioners, it identifies practical and evidence-based policy options to inform the discourse and climate negotiations. With climate-related risks on the rise and impacts being felt around the globe has come the recognition that climate mitigation and adaptation may not be enough to manage the effects from anthropogenic climate change. This recognition led to the creation of the Warsaw International Mechanism on Loss and Damage in 2013, a climate policy mechanism dedicated to dealing with climate-related effects in highly vulnerable countries that face severe constraints and limits to adaptation. Endorsed in 2015 by the Paris Agreement and effectively considered a third pillar of international climate policy, debate and research on Loss and Damage continues to gain enormous traction. Yet, concepts, methods and tools as well as directions for policy and implementation have remained contested and vague. Suitable for researchers, policy-advisors, practitioners and the interested public, the book furthermore: • discusses the political, legal, economic and institutional dimensions of the issue • highlights normative questions central to the discourse • provides a focus on climate risks and climate risk management. • presents salient case studies from around the world.

In this comprehensive work, authors Paul Michalik and Chris Boys put claims at the heart of their analysis of insurance law in New Zealand. Insurance Claims in New Zealand is a rigorous and complete presentation of the law relating to how insurance claims are made and assessed in New Zealand. The authors examine issues arising at every level in the process -- from determining the validity of the policy and resolving issues of coverage and exclusion, to assessing the quantum of the loss or damage to be paid. Since 2015, when the first edition was published, there have been a number of developments in Insurance law: the concept of post claim good faith has developed; a number of outstanding unresolved issues have received judicial attention, including the assignment of claims rights, and the fraudulent claims rule; the issue of insurers' liability for defective repairs has been resolved; the Earthquake Commission/Toka Tū Ake's empowering legislation has been substantially overhauled; the Canterbury Earthquake Insurance Tribunal was established; and the Government has begun the work of meaningful insurance law reform"--Publisher information.

Health Insurance aims at filling a gap in actuarial literature, attempting to solve the frequent misunderstanding in regards to both the purpose and the contents of health insurance products (and 'protection products', more generally) on the one hand, and the relevant actuarial structures on the other. In order to cover the basic principles regarding health insurance techniques, the first few chapters in this book are mainly devoted to the need for health insurance and a description of insurance products in this area (sickness insurance, accident insurance, critical illness covers, income protection, long-term care insurance, health-related benefits as riders to life insurance policies). An introduction to general actuarial and risk-management issues follows. Basic actuarial models are presented for sickness insurance and income protection (i.e. disability annuities). Several numerical examples help the reader understand the main features of pricing and reserving in the health insurance area. A short introduction to actuarial models for long-term care insurance products is also provided. Advanced undergraduate and graduate students in actuarial sciences; graduate students in economics, business and finance; and professionals and technicians operating in insurance and pension areas will find this book of benefit.

Over the past two decades, there have been a number of important developments in the areas of liability, property, and life and health insurance that have significantly changed insurance law. Accordingly, the Fourth Edition of Principles of Insurance Law has been substantially rewritten, reformatted, and refocused in order to offer the insurance law student and practitioner a broad perspective of both traditional insurance law concepts and cutting-edge legal issues affecting contemporary insurance law theory and practice. This edition not only expands the scope of topical coverage, but also segments the law of insurance in a manner more amenable to study, as well as facilitating the recombination and reordering of the chapters as desired by individual instructors. The Fourth Edition of Principles of Insurance Law includes new and expanded treatment of important insurance law developments, including: The critical role of insurance binders as temporary forms of insurance as illustrated in the World Trade Center property insurance disputes resulting from the terrorist attacks of September 11, 2001; The continuing debate between "legal formalists" and "legal functionalists" for "the heart and soul" of insurance contract law; What constitutes a policyholder's "reasonable expectation" regarding coverage; The current property and liability insurance "crisis"; Risk management and self-insurance issues; Emerging, and frequently conflicting, case law concerning the intersection of insurance law and federal anti-discrimination regulation; Ongoing interpretive battles over the preemptive scope of ERISA; The United States Supreme Court ruling that a California statute attempting to leverage European insurers into honoring commitments to Holocaust era policies is preempted by the Executive's power over foreign affairs; The State Farm v. Campbell decision, which struck down a \$145 million punitive damages award in an insurance bad faith claim as well as setting more restrictive parameters for the recovery of punitive damages; New issues over the dividing line between "tangible" property typically covered under a property insurance policy and "intangible" property, which is typically excluded -- an issue of increasing importance in the digital and cyber age; Refinement of liability insurance law regarding trigger of coverage, duty to defend, reimbursement of defense costs, and apportionment of insurer and policyholder responsibility for liability payments; The difficult-to-harmonize decisions concerning when a loss arises out of the "use" of an automobile; Insurer bad faith and the availability, if any, of actions against a policyholder for "reverse bad faith"; and The degree to which excess insurance and reinsurance may be subject to modified approaches to insurance policy construction. The Teacher's Manual highlights the differences between the Third Edition and the Fourth Edition. In addition, it includes case-brief summaries of the major cases excerpted in the book; authors' analyses of the notes, questions, and problems that follow the principal cases; and offers alternative syllabuses for planning purposes. This book also is available in a three-hole punched, alternative loose-leaf version printed on 8.5 x 11 inch paper with wider margins and with the same pagination as the hardbound book.
