Interest in regional anaesthesia has been flourishing for a number of reasons, including in particular the feasibility of ultrasound-guided peripheral nerve blocks. This trend is reflected in the growing popularity of fellowships in regional anaesthesia. The syllabus for such fellowship examinations is vast, and the current book aims to provide suitable guidance by presenting typical multiple choice questions with accompanying answers, in detail when necessary. The entire syllabus is covered in four sections that address basic principles and equipment, peripheral nerve blocks, central neuraxial blocks, and regional anaesthesia and acute pain. This book will be especially useful for those preparing for European Society of Regional Anaesthesia diploma examinations or for the regional anaesthesia component of FRCA examinations. It is also highly relevant to equivalent U.S. and Canadian examinations and will be helpful to all who require a self-assessment tool in the subject.

Intraoperative neurophysiologic monitoring has shown a steady increase in use for surgeries in which neural structures may be at risk of injury. Some of the surgical techniques used carry inherent risks, and these risks have changed the way in which neurophysiologic monitoring has impacted patient safety and quality of care during surgical procedures. It is therefore crucial that those performing and interpreting intraoperative neurophysiologic monitoring are adequately trained. This book is a comprehensive guide to the current practice of intraoperative neurophysiology with chapters on various modalities and clinical uses. Separate chapters devoted to anesthesia, operating room environment, special considerations in pediatrics and the interpretation and reporting of neurophysiologic data are useful and complementary. Questions and detailed answers on the topics covered can be found on the accompanying website for study review. This book will be useful to the trainee as well as the neurophysiologist already in practice.
