 Very few careers can offer you the freedom, flexibility and income that day trading does. As a day trader, you can live and work anywhere in the world. You can decide when to work and when not to work. You only answer to yourself. That is the life of the successful day trader. Many people aspire to it, but very few succeed. Day trading is not gambling or an online poker game. To be successful at day trading you need the right tools and you need to be motivated, to work hard, and to persevere. At the beginning of my trading career, a pharmaceutical company announced some positive results for one of its drugs and its stock jumped from

\$1 to over \$55 in just two days. Two days! I was a beginner at the time. I was the amateur. I purchased 1,000 shares at \$4 and sold them at over \$10. On my very first beginner trade, I made \$6,000 in a matter of minutes. It was pure luck. I honestly had no idea what I was doing. Within a few weeks I had lost that entire \$6,000 by making mistakes in other trades. I was lucky. My first stupid trade was my lucky one. Other people are not so lucky. For many, their first mistake is their last trade because in just a few minutes, in one simple trade, they lose all of the money they had worked so hard for. With their account at zero, they walk away from day trading. As a new day

trader you should never lose sight of the fact that you are competing with professional traders on Wall Street and other experienced traders around the world who are very serious, highly equipped with advanced education and tools, and most importantly, committed to making money. Day trading is not gambling. It is not a hobby. You must approach day trading very, very seriously. As such, I wake up early, go for a run, take a shower, get dressed, eat breakfast, and fire up my trading station before the markets open in New York. I am awake. I am alert. I am motivated when I sit down and start working on the list of stocks I will watch that day. This morning routine

has tremendously helped my mental preparation for coming into the market. Whatever your routine is, starting the morning in a similar fashion will pay invaluable dividends. Rolling out of bed and throwing water on your face 15 minutes before the opening bell just does not give you sufficient time to be prepared for the market's opening. Sitting at your computer in your pajamas or underwear does not put you in the right mindset to attack the market. I know. I've experienced all of these scenarios. In *How to Day Trade for a Living*, I will show you how you too can take control over your life and have success in day trading on the stock market. I love teaching. It's my

passion. In this book, I use simple and easy to understand words to explain the strategies and concepts you need to know to launch yourself into day trading on the stock market. This book is definitely NOT a difficult, technical, hard to understand, complicated and complex guide to the stock market. It's concise. It's practical. It's written for everyone. You can learn how to beat Wall Street at its own game. And, as a purchaser of my book, you will also receive a membership in my community of day traders at www.vancouver-traders.com. You can monitor my screen in real time, watch me trade the strategies explained in his book, and ask questions of me and

other traders in our private chat room. I invite you to join me in the world of day trading. I'm a real person who you can connect with. I'm not just a photograph here on the Amazon site. I love what I do. You can follow my blog post under Author Updates on my Author page on Amazon. It's honest. You'll see I lose some days. You can read the reviews of my book. I know you will learn much about day trading and the stock market from studying my book. You can join at no cost and with no obligation my community of day traders at www.vancouver-trader.com. You can ask us questions. Practical, hands-on knowledge. That's How to Day Trade for a Living.

Learn A Powerful Day Trading Strategy In Less Than 60 Minutes A profitable trading strategy is the most important tool for a trader. This book explains a powerful trend-following day trading strategy for trading futures, stocks, ETFs and Forex. "The Simple Strategy" Is

Easy To Understand
And To Trade The
Simple Strategy is very
popular amongst
traders for the
following reasons:
Clear Entry Rules When
trading "The Simple
Strategy", there's no
second-guessing. As
you will see, the entry
rules are based on
indicators - and these
rules are black and
white. Either the MACD
is above the zero line
or it isn't. And either
the RSI is above 70 or
it isn't. The entries are
easy to identify and
execute. That's why
this strategy is called
"The Simple Strategy"
Clear Exit Rules When
trading "The Simple
Strategy" you'll know
when to exit even
before you enter the
trade. So, you know
exactly how much to
risk on any given trade
which is essential for

precise position sizing
and money
management. Plus, you
can put the trade on
auto-pilot once your
entry order is filled.
This keeps trade
management to a
minimum. It's easy and
simple. Taking
advantage of small
intraday trends These
days trends are short-
lived. The times when
you could enter the
market in the morning
and exit the market in
the afternoon are over.
These days the
markets can turn on a
dime. Low trading
commissions and
computerized trading
have destroyed the
nice and long intraday
trends. However, with
"The Simple Strategy"
you can take
advantage of the small
intraday trends that we
are seeing in today's
markets. You don't

need a sophisticated trading software. If you want to trade "The Simple Strategy", you only need a charting software with "basic" charting capabilities: Your charting software needs to be able to plot RANGE BARS, BOLLINGER BANDS, MACD and RSI. More than 90% of the charting software packages that are available today have these capabilities. There's no need to buy any proprietary indicators or expensive charting software! In short: "The Simple Strategy" can greatly simplify your trading. *** WARNING: This Book Is NOT For Everybody! *** Do NOT buy this book if... .. You Are Looking For The "Holy Grail" Because it doesn't exist! When trading

"The Simple Strategy", there will be losses! Losses are part of our business as traders. The good news: If you follow the rules of "The Simple Strategy", then you will make more money on your profitable trades than you lose on your losing trades. In fact, the risk/reward ratio of this strategy is 1: 1.5, so you can expect to make \$150 for every \$100 you risk. ... You Want To Automate Your Trading Strategies "The Simple Strategy" will give you clear entry signals, but it's up to YOU to decide if you want to take the signal. As an example, I personally do NOT trade right into a major report. And I only trade the first two hours after the markets open, since most trends occur during this time.

This publication serves as a roadmap for exploring and managing climate risk in the U.S. financial system. It is the first major climate publication by a U.S. financial regulator. The central message is that U.S. financial regulators must recognize that climate change poses serious emerging risks to the U.S. financial system, and they should move urgently and decisively to measure, understand, and address these risks. Achieving this goal calls for strengthening regulators' capabilities, expertise, and data and tools to better monitor, analyze, and quantify climate risks.

It calls for working closely with the private sector to ensure that financial institutions and market participants do the same. And it calls for policy and regulatory choices that are flexible, open-ended, and adaptable to new information about climate change and its risks, based on close and iterative dialogue with the private sector. At the same time, the financial community should not simply be reactive—it should provide solutions. Regulators should recognize that the financial system can itself be a catalyst for investments that accelerate economic resilience and the transition to a net-zero emissions economy. Financial innovations, in the form of new

financial products, services, and technologies, can help the U.S. economy better manage climate risk and help channel more capital into technologies essential for the transition.
