In a survey of neuropsychologists published in *The Clinical*

Neuropsychologist, the first edition of the Compendium was named as one of the eleven essential books in their field. This second edition has been thoroughly updated to cover new developments in neuroscience, cognitive psychology, and psychological assessment. It includes new chapters on test selection, report writing and informing the client, executive functions, occupational interest and aptitude, and the assessment of functional complaints. In addition to updating research findings about the tests covered in the first edition, the book now contains almost twice as many tests.

Scores of talented and dedicated people serve the forensic science community, performing vitally important work. However, they are often constrained by lack of adequate resources, sound policies, and national support. It is clear that change and advancements, both systematic and scientific, are needed in a number of forensic science disciplines to ensure the reliability of work, establish enforceable standards, and promote best practices with consistent application. *Strengthening Forensic Science in the United States: A Path Forward* provides a detailed plan for addressing these needs and suggests the creation of a new government entity, the National Institute of Forensic Science, to establish and enforce standards within the forensic science community. The benefits of improving and regulating the forensic science disciplines are clear: assisting law enforcement officials, enhancing homeland security, and reducing the

risk of wrongful conviction and exoneration.

Strengthening Forensic Science in the United States gives a full account of what is needed to advance the forensic science disciplines, including upgrading of systems and organizational structures, better training, widespread adoption of uniform and enforceable best practices, and mandatory certification and accreditation programs. While this book provides an essential call-to-action for congress and policy makers, it also serves as a vital tool for law enforcement agencies, criminal prosecutors and attorneys, and forensic science educators.

Teaching History with Film provides a fresh, engaging, and clear

overview of teaching with film to effectively enhance social studies instruction. Using cases of experienced teachers to illustrate accomplished history teaching through movies, this text provides pre- and in-service teachers with ideas for implementing film-based lessons in their own classrooms and offers a deeper understanding of the thorny issues involved in using film to teach history. The second edition is completely revised and updated including: two entirely new case studies; a new chapter focusing on using international film and incorporating a more global view in the classroom; and additional material on using film to tackle difficult and controversial issues; as well as updates to all of the cases. Each section of the book focuses on how teachers can effectively support the development of students' historical film literacy through topics such as using film to develop interpretive skills, to explore controversial issues, and to develop historical empathy. By developing the skills students need to think critically about the past or what they think they know about history, the lessons

in this book illustrate how to harness the pedagogical power of film to provide the tools necessary for rigorous inquiry and democratic citizenship. Special features include: "Reflection on the Case," following each chapter, analyzing and discussing the strengths and limitations of the teacher's approach as well as providing strategies for using and choosing films specific to the educational outcome

Sample unit outlines, descriptions of class texts and films, worksheets, essay questions, viewer guides, and exercises for the classroom throughout

Discussion of the practical considerations facing classroom teachers, including juggling time restraints, issues of parental permission, and meeting standards

Penguin

Forget the 10,000 hour rule— what if it's possible to learn the basics of any

new skill in 20 hours or less? Take a moment to consider how many things you want to learn to do. What's on your list? What's holding you back from getting started? Are you worried about the time and effort it takes to acquire new skills—time you don't have and effort you can't spare? Research suggests it takes 10,000 hours to develop a new skill. In this nonstop world when will you ever find that much time and energy? To make matters worse, the early hours of practicing something new are always the most frustrating. That's why it's difficult to learn how to speak a new language, play an instrument, hit a golf ball, or shoot great photos. It's so much easier to watch TV or surf the web . . . In *The First 20 Hours*, Josh Kaufman offers a systematic approach to rapid skill acquisition—how to learn any new skill as quickly as possible. His method shows you how to deconstruct complex skills, maximize productive practice, and remove common learning barriers. By completing just 20 hours of focused, deliberate practice you'll go from knowing absolutely nothing to performing noticeably

well. Kaufman personally field-tested the methods in this book. You'll have a front row seat as he develops a personal yoga practice, writes his own web-based computer programs, teaches himself to touch type on a nonstandard keyboard, explores the oldest and most complex board game in history, picks up the ukulele, and learns how to windsurf. Here are a few of the simple techniques he teaches: Define your target performance level: Figure out what your desired level of skill looks like, what you're trying to achieve, and what you'll be able to do when you're done. The more specific, the better. Deconstruct the skill: Most of the things we think of as skills are actually bundles of smaller subskills. If you break down the subcomponents, it's easier to figure out which ones are most important and practice those first. Eliminate barriers to practice: Removing common distractions and unnecessary effort makes it much easier to sit down and focus on deliberate practice. Create fast feedback loops: Getting accurate, real-time information about how well you're performing

during practice makes it much easier to improve. Whether you want to paint a portrait, launch a start-up, fly an airplane, or juggle flaming chain-saws, *The First 20 Hours* will help you pick up the basics of any skill in record time . . . and have more fun along the way. *Write Source 2000* Penguin

 Dynamics of News Reporting and Writing: Foundational Skills for a Digital Age shows students how to approach their stories and think on their feet in the evolving media landscape. Recognizing that well-crafted stories are founded on sharp prose, author Vincent F. Filak covers more foundational elements of a newswriting textbook, like lead writing, structure, and storytelling, while also teaching students how to think critically and determine what matters most to their readers. The Second Edition includes even more writing and grammar exercises, discussions of social media and digital media advancements, and additional career-related examples to help students succeed upon entering the field.
