Socially responsible investing (SRI) is an investment approach that combines investors' financial as well as nonfinancial goals in the security selection process. Technically, investors can engage in SRI either by directly investing in companies that implement corporate social activities or by investing their money in SRI funds, which apply screening criteria to select securities. The screening process applied by the SRI funds has led to controversy among academics regarding whether the use of SRI screens in the security selection process influences the financial

performance of the funds. The empirical study analyzes whether or not the screening process applied by such funds influences their financial performance. Previous research mostly has focused on analyzing the performance of SRI equity funds established in the United States. The study at hand not only includes SRI equity funds, but also SRI balanced and fixed income funds established in Europe, the biggest market for SRI globally. The study provides unexpected results that are not only of interest for investors, who want to get a better understanding of the effect on the financial performance of their portfolios in case SRI funds are added. The results are also relevant for SRI fund managers, who are interested in promoting their funds and attracting (new) investors, and for academics, whose research interests are e. g., located in the fields of SRI, fund portfolio performances

and market efficiencies.

The essential guide to the Tour de France, Speed Read Tour de France will make you an instant expert on its history, its winners and rivalries, the tactics necessary to win it, and the technology of its bicycles. Le Tour has sometimes been called “chess on wheels” because of the complicated strategies used by the race's 22 teams and 176 riders. This book—written by award-winning cycling journalist John Wilcockson, who has covered the Tour 45 times—will help you understand those tactics, along with informing you about the race's century-plus history, its famed winners and rivalries, and the technology that has gone into creating the modern racing bicycle and determining how today's athletes train. Among the questions answered are: Who owns the Tour? How are the course's 21 stages selected? What are the most famous mountain climbs? How is the overall winner determined? What is a peloton, a soigneur, or an echelon? How big are the prizes? What are time bonuses? Who was the first American to compete in the Tour, and who was the first one to win it? How fast do the racers go down mountain descents? What speeds can the riders reach in sprint finishes? Why are the teams known by the names of their sponsors and not their countries? What do the riders eat, and where do they sleep every night? What are all those motorcycles doing among the cyclists? How do the organizers deal with doping scandals? And is it true that, one year, the top four finishers were all disqualified? You

will find the answers to all these questions, and many more, in this informative, beautifully illustrated, fun-to-read book: Speed Read Tour de France.

In his Velosaurus, ITV Tour de France commentator and cycling writer Ned Boulting provides the ultimate lexicon of nonsense terminology surrounding the esteemed Tour de France.
