"The perceptions of the role of women and men in families have changed over the past few decades. Men are no longer perceived as the economic providers to families. The role of men in the family has undergone many "diverse demographic, socio-economic and cultural transformations" impacting the formation, stability and overall well-being of families. In light of this development, DESA's Division for Social Policy and Development (DSPD) launched a new publication on "Men in Families and Family Policy in a Changing World" on 17 February focusing on the shifting roles and views of men in families."--Provided by publisher.

Culture: urban future Infobase Publishing

The health of scientific enterprise has become a critical political and social issue as nation states tackle austerity, diversity, global challenges, whilst simultaneously supporting a competitive and innovative national economy. A key asset in achieving such ambitions is for a scholarly information system which enables the fruits of the research effort to be disseminated efficiently. As the information support system struggles with adapting from a print-based to a digital process, the dysfunctionality current within STEM publishing in particular becomes evident. New ways of supporting research are emerging which require a new approach to publishing, an approach which takes on board the many demographic, social, technical and administrative changes taking place in both science itself and society. A radical strategic assessment is required and this book tracks key aspects required for any new future strategy. This book provides a catalogue of issues to which a future STEM information industry will need to adapt. They range from the effects of technology on the neurological processes of research to the growing use of technology to speed up the exchange of information among groups and laboratories; from considerations about quality control yet maintaining intellectual ownership; from changing from an elitist STEM system favouring academics to a more democratic process with wider appeal. There is the neglected non-academic market and its need to share in the results of the research effort, often through partnership and being part of a 'hive mind'. This is the large world of the unaffiliated knowledge workers, of which academia is numerically but a small part. The many changes taking place in scholarly information dictate that the future is unlikely to be a smooth and gradual evolution from the past. Radical new approaches are required, a revolution which takes on board the perfect storm of changes listed in this book. Just as such changes have changed the face of industries such as music and retail in recent years, so similar dramatic changes are likely to result in a restructuring of STEM into a more technologically-focused industry within the next decade. The implications for the current STEM stakeholders are profound.

Multinationals and Taxhavens McGraw-Hill/Irwin

This book draws together the most authoritative articles on development economics published in the past few years, is aimed at undergraduate level and is suitable for students with little or no background in economics. The main themes include poverty, foreign aid, agriculture and human capital and amongst those whose work appears can be counted Amartya Sen, Jeffrey Sachs, Jagdish Bhagwati, Joseph Stiglitz, Paul Romer, Dani Rodrik, William Easterly, Robert Barro, Kenneth Arrow, Hernando de Soto, Daron Acemoglu, Muhammad Yunus, Anne Krueger, Abhijit Banerjee, Esther Duflo, Michael Kremer and Martin Feldstein. The reader focuses on the most recent and up-to-date contributions to the field of development economics. Instead of collecting "classic" contributions which are already available through many sources the articles chosen reflect recent developments in the discipline (for instance, in the area of geography and development) and include contributions that address recent events (the dramatic resurgence of a debt relief movement). "The Development Economics Reader" should be an invaluable resource for all students of the discipline.

This book offers practical instruction on the use of audit studies in the social sciences. It features essays from sociologists, economists, and other experts who have employed this powerful and flexible tool. Readers will learn how to implement an audit study to examine a variety of questions in their own research. The essays first discuss situations where audit studies are the most effective. These tools allow researchers to make strong causal claims and explore questions that are often difficult to answer with observational data. Audit studies also stand as the single best way to conduct research on discrimination. The authors highlight what these studies have uncovered about labor market processes in the past decade. The next section gives some guidance on how to design an audit study. The essays cover the difficult task of getting a study through an institutional review board, the technical setup of matching procedures, and statistical power and analysis techniques. The last part focuses on more advanced aspects. Coverage includes understanding context, what variables may signal, and the use of technology. The book concludes with a discussion of challenges and limitations with an eye towards the future of audit studies. "Field experiments studying and testing for housing and labor market

discrimination have, rightly, become the dominant mode of discrimination-related research in economics and sociology. This book brings together a number of interesting and useful perspectives on these field experiments. Many different kinds of readers will find it valuable, ranging from those interested in getting an overview of the evidence, to researchers looking for guidance on the nuts and bolts of conducting these complex experiments." David Neumark, Chancellor's Professor of Economics at the University of California - Irvine "For decades, researchers have used experimental audit studies to uncover discrimination in a variety of markets. Although this approach has become more popular in recent years, few publications provide detailed information on the design and implementation of the method. This volume provides the first deep examination of the audit method, with details on the practical, political, analytical, and theoretical considerations of this research. Social scientists interested in consuming or contributing to this literature will find this volume immensely useful." Devah Pager, Professor of Sociology and Public Policy at Harvard University

Nowadays globalization processes have become all-embracing. But at the same time, despite the ever-increasing flow of publications on globalization, our understanding and knowledge of it still leaves much to be desired. Especially it concerns the global processes in general, of which globalization is a part. We also need to systematize our ideas about globalization and Global Studies to somehow fit the realities. In particular, this concerns the education process, because the current state of education will determine the way people will perceive reality in the forthcoming decades. This yearbook aims at contributing to the solution of these important tasks. It is the third in the series of yearbooks titled Globalistics and Globalization Studies. This year it has the following subtitle: Aspects & Dimensions of Global Views. Its authors consider globalization and Global Studies in different dimensions and aspects: philosophical, methodological, and pedagogical, in terms of various processes, problems and

perspectives. Of course, to some extent this means that this yearbook presents rather diverse materials. But globalization itself is very diverse. And its comprehension may proceed in the framework of different theoretical approaches and points of view. In the present yearbook one can find perceptions of globalization and Global Studies by a number of scholars from different countries of the world and learn rather peculiar visions of globalization by the Russian scientists and educators. The yearbook will be interesting to a wide range of researchers, teachers, students and all those who pay attention to global issues.

This book focuses on the tremendous shift in both economic growth and development progress taking place towards the Asia-Pacific Region. Each of the countries in the region has various concerns and challenges for its sustainable development, a common goal most of them are trying to achieve at the moment. Interestingly, sustainable development in the region may be critical for achieving sustainable development at the global level as well. With a limited mandate, the book covers some specific developmental issues of 'the hot spots' of APR that are regarded to be contributing to their sustainable development. The book also looks at the formation and strengthening of some economic and financial initiatives with the potentials to affect growth and influence economic cooperation and integration of the countries in the region.
