BANNED: The Golden Book of Chemistry Experiments was a children's chemistry book written in the 1960s by Robert Brent and illustrated by Harry Lazarus, showing how to set up your own home laboratory and conduct over 200 experiments. The book is controversial, as many of the experiments contained in the book are now considered too dangerous for the general public. There are apparently only 126 copies of this book in libraries worldwide. Despite this, its known as one of the best DIY chemistry books every published. The book was a source of inspiration to David Hahn, nicknamed "the Radioactive Boy Scout" by the media, who

tried to collect a sample of every chemical element and also built a model nuclear reactor (nuclear reactions however are not covered in this book), which led to the involvement of the authorities. On the other hand, it has also been the inspiration for many children who went on to get advanced degrees and productive chemical careers in industry or academia.

This book is a companion to the EngineerGuy YouTube series of

Michael Faraday's 19th century lectures on The Chemical History of a Candle. This book contains the lectures, 14 illustrations, introductory guides and seven student activities with teaching guides.

What is the golem? In Jewish mythology the Golem is an effigy or image brought to life. While not evil, it is a strong, clumsy and incomplete servant. Through a series of case studies, ranging from relativity and cold fusion to memory in worms and the sex lives of lizards, Harry Collins and Trevor Pinch debunk the traditional view that science is the straightforward result of competent theorization, observation and experimentation.

Scientific certainty is the interpretation of ambiguous results. The very well received first edition generated much debate, reflected in a substantial new Afterword in this new edition, which seeks to place the book in what have become known as 'the science wars'.

Prudent Practices in the Laboratory-the book that has served for decades as the standard for chemical laboratory safety practice-now features updates and new topics. This revised edition has an expanded chapter on chemical management and delves into new areas, such as nanotechnology, laboratory security, and emergency planning. Developed by experts from academia and industry, with specialties in such areas as chemical sciences, pollution prevention, and laboratory safety, Prudent Practices in the Laboratory provides guidance on planning procedures for the handling, storage, and disposal of chemicals. The book offers prudent practices designed to promote safety and includes practical information on assessing hazards, managing chemicals, disposing of wastes, and more. Prudent Practices in the Laboratory will continue to serve as the leading source of chemical safety guidelines for people working with laboratory chemicals: research chemists, technicians, safety officers, educators, and students.

The Golden Book of Chemistry Experiments was a children's chemistry book written in the 1960s by Robert Brent and illustrated by Harry Lazarus and published by Western Publishing in their Golden Books series. Many of the experiments contained in the book are now considered highly dangerous for unsupervised children, and would not appear in a modern children's chemistry book. Only 126 copies of this book exist in libraries worldwide. The book was a source of inspiration to David Hahn, nicknamed "the Radioactive Boy Scout" by the media, who tried to collect a sample of every chemical element and also built a model nuclear reactor, which led to the involvement of the authorities. This book is now considered quite RARE and a Scientific Gem, and so we are happy to have made this available for Print!!
