Decaying urban spaces are common in post-industrial New England. When manufacturing activities withdrew from New England they left holes in the urban fabric. Physical absence of these former economic drivers is easy to note in empty mill buildings, warehouses, and storefronts. Farther reaching impacts of this exodus are less apparent. Jobs went with manufacturing. Raw materials needed to be harvested and made available to manufacturers; the finished products needed to be distributed, sold, and moved; supporting businesses provided for these needs. Many other groups supported manufacturing; some through the management of the companies, some catered to workers' needs, or the needs of workers' children and families. This network of groups and individuals connected to industry made up vibrant communities in the heyday of manufacturing in New England. When manufacturing left many of the groups providing support functions collapsed. Many people moved away, or if they stayed they were left unemployed or underemployed. Whole

communities were damaged when manufacturing left New England. Many have not yet fully recovered. The goal of this thesis is to propose a path toward the revitalization and repair of the urban fabric of depressed post-industrial communities in New England. Many post-industrial New England communities have lost their identity. These places have empty buildings, empty lots, and their main streets, former "downtowns," are quiet. There is little to recommend these areas as a place to be. These depressed and decaying places need revitalization. They are no longer centers of manufacturing or industry; they need a new identity, one that reflects what they are now and what they would like to become in the future. Revitalization should be grounded in a study of the unique place it addresses. There are communities and inhabitants present in even the most depressed places. These groups need to be recognized and their needs identified before revitalization can be undertaken. Revitalization should be inclusive. Residents should feel encouraged to stay in, and be proud of, their community. Revitalization should be sustainable; socially, ecologically and economically. If revitalization of a depressed area calls for attracting more residents and businesses, those targeted to inhabit the revitalized space should fit into the existing community, not displace it. This thesis proposes a revitalization of a depressed post-

industrial area of Millers Falls, Massachusetts in the vicinity of East Main and Bridge Streets. This revitalization proposal will be carried out within a framework of study of place, inclusivity, and holistic sustainability.

Abstract: Industrial sector was dominated before 1970s, in order to meet the social need at that period, the Government put great effort in industrial development. Industrial areas were commonly found. As economic restructured, the open door policy made "industrial" sector was replaced by "financial" sector gradually. Facing this changed environment,

addresses the role of local government as a critical supporter of these types of projects, and derives lessons for city officials, developers, and other local stakeholders on how to advance the complementary goals of historic preservation, support of cultural industries, and economic and community revitalization. This paper argues that the adaptive reuse of historic mills and cultural industry development are complementary strategies for economic and community revitalization that city officials should actively pursue by establishing plans, policies, and programs to facilitate the redevelopment of these industrial and historic landmarks.

RECONOMICS is the first book that shows how to boost economic growth and community resilience simultaneously. It also reveals the surprising factor that sabotages most revitalization / resilience efforts. RECONOMICS is THE guide to healing economies, societies and nature together!

"RECONOMICS is a must-read for every mayor, resilience activist, planning commissioner and urban redevelopment professional who has been frustrated in their attempts to revitalize a place. It succinctly describes why most revitalization plans fail, analyzes what's missing, and provides a simple, easy-to-follow strategic process for success." - Kevin L. Maeyers, D.Mgmt., AICP; President, Arivitas Strategies, LLC, La Quinta, CA; Vice Director of Policy, IES, California Chapter, American Planning Association. "Storm Cunningham is so far ahead of the community revitalization game, I'm in awe." - Sarah Sieloff, Executive Director, Center for Creative Land Recycling (September 2019) "RECONOMICS hits the nail on the head!" - Nalin Seneviratne, Director of City Centre Development, Sheffield City Council, Sheffield, England "Storm Cunningham's RECONOMICS Process raises the bar for community and regional revitalization. It's a powerful package, succinctly capturing the process that we have doggedly tried to identify over time, not always knowing the next step. The RECONOMICS Process brings a holistic dimension to redevelopment, inextricably linking vision and task." - Eric Bonham, P.Eng, Board of Partnership for Water Sustainability in British Columbia, Former Director, BC Ministry of Environment & BC Ministry of Municipal Affairs "Storm Cunningham is the world's thought leader on community revitalization and natural resource restoration." - George Ochs, Managing Director of Real Assets, JP Morgan. "RECONOMICS should be mandatory reading for all Mayors, Chief Executives and Directors of Planning in cities and regions." - Rick Finc, Principal, RFA Development Planning, Edinburgh, Scotland "RECONOMICS is very concentrated, highly sophisticated and stunningly accurate." - Merrit Drucker, Anacostia Waterfront Trust, Washington, DC "Storm Cunningham's RECONOMICS transformed our latest project, which uses his 3Re strategy." - Dumas F. Lafontant, Director, Lower Roxbury Coalition, Boston, Massachusetts Does your city or region have an actual process for reliably creating

resilient, inclusive economic growth...or just the usual vision, plan and projects? The reliable production of ANYTHING requires a process. Everyone knows this...except most leaders of local renewal initiatives. Over 95% of community revitalization and resilience projects fail to achieve their goals, and a shocking percentage of them fail outright. The reason is the same in almost all cases: lack of a complete renewal process. There's always at least one crucial element of the process missing. Since most leaders don't know what the minimum viable process is, they can't fill the gap. In RECONOMICS, that complete strategic renewal process is revealed for the first time. It can be applied at the community, regional or national levels. If you have ANY role in improving your local future, you need to read this book. What it reveals can easily double the ROI (revitalization on investment) of your redevelopment, renewal and climate adaptation efforts.

Arabella Station Development, New Orleans, LA New York, N.Y. : Praeger

The present book highlights studies that show how smart cities promote urban economic development. The book surveys the state of the art of Smart City Economic Development through a literature survey. The book uses 13 in depth city research case studies in 10 countries such as the North America, Europe, Africa and Asia to explain how a smart economy changes the urban spatial system and vice versa. This book focuses on exploratory city studies in different countries, which investigate how urban spatial systems adapt to the specific needs of smart urban economy. The theory of smart city economic development is not yet entirely understood and applied in metropolitan regional plans. Smart urban economies are largely the result of the influence of ICT applications on all aspects of urban economy, which in turn changes the land-use system. It points out that the dynamics of smart city GDP creation takes 'different paths,' which need further empirical study, hypothesis testing and mathematical modelling. Although there are hypotheses on how smart cities generate wealth and social benefits for nations, there are no significant empirical studies available on how they generate urban economic development through urban spatial adaptation. This book with 13 cities research studies is one attempt to fill in the gap in knowledge base.

Issues and Challenges

"Offers achievable strategies for revitalizing industrial areas and building upon the potential of overlooked resources of economic, physical, and cultural significance. Addresses such challenges as fostering entrepreneurship, reducing poverty and inequality, and augmenting the number of skilled professionals. Provides analysis of healthy economic development practices for public and private sectors"--Provided by publisher.

Cases and Strategies for City and Suburb

Adaptive reuse refers to reusing an old building for a purpose other than which it was originally built or designed. This conservation approach has become increasingly popular around the world. However, there are few publications that focus on its application in Asia. This book fills this gap by looking at both unique and shared aspects of adaptive reuse in three Asian urban centers: Hong

Kong, Shanghai, and Singapore. Building on government policy documents and extensive field work, this book contextualizes adaptive reuse in each city and reveals the impetus behind a wide range of projects from revitalization in Hong Kong, commercial development in Shanghai, to community building in Singapore. The introductory chapter sets adaptive reuse within an international perspective, noting salient differences and similarities between Asia and other parts of the world. It also anchors the discussion within a regional perspective, focusing on the similarities and differences between Hong Kong, Shanghai, and Singapore. Each of the following four essays addresses a specific topic about adaptive reuse, including its relationship to urban development and sustainability, how it benefits heritage buildings, and how it reveals best practices in heritage conservation in Asia. The subsequent three essays, one for each city, supplemented with timelines, set out a clear framework for understanding the city-specific case studies that follow the essays. Afterwards, fifteen representative projects across the three cities are presented as in-depth case studies. The pairing of essays and case studies provides a detailed understanding of each city's approach to adaptive reuse in the twenty-first century; a time when the need for sustainable development solutions are at the forefront. Intended for classroom use and professional readership, this book will be of considerable value in Asia, as well as elsewhere, providing material for stimulating and worthwhile discussion. "Asian Revitalization is a highly practical and accessible volume on the long-established conservation practice of adaptive reuse in East Asia. Its focus on real-life issues, examples, and challenges posed by revitalization programs in the region is extremely relevant to researchers and practitioners in architectural conservation, urban design, and urban studies." —Miles Glendinning, University of Edinburgh, Scotland "This is a superb, well-documented, and original book written by some of the best-known and highly respected authors in the field of heritage conservation. The carefully examined case studies illustrate a wide variety of solutions that highlight the work of some of the best minds of the next generations." —Alastair Kerr, University of Victoria, Canada "This is a most interesting set of essays, informative and thought-provoking. The best way to save any heritage building is by keeping it in beneficial use and how to achieve this in a sensitive manner is what these essays are about. They should be vital reading for anyone considering an adaptive reuse project in Asia." —Michael Morrison, Purcell, UK "With cultural heritage firmly ensconced in the global development agendas of the United Nations, this well-grounded volume draws upon the experience of Hong Kong SAR, Shanghai, and Singapore to demonstrate to scholars and practitioners alike how historic properties can be sustained through savvy adaptive reuse in the midst of tremendous urban redevelopment pressures." —Montira Horayangura Unakul, UNESCO Bangkok, Thailand [Politics and Planning in New York, Paris, and London](#) Revitalization of Industrial Buildings in Hong Kong Evaluation and Prospect An Analysis of the Revitalization of Industrial Buildings in Hong Kong An Analysis of the Revitalization of Industrial Buildings in Hong Kong Open Dissertation Press
