Excerpt from Accounting, Principles and Practice, Vol. 1 Whenever the author, as a teacher, has had the opportunity of digressing from the beaten path, he has experimented to find some method

by means of which accounting principles could be taught within a minimum amount of time without sacrificing essentials. This desire was due in part to the authors dissatisfaction with the earlier teaching methods under which he chafed as a student; in part to the dissatisfaction expressed to him by mature students of accounting who were studying elementary principles and to whom the method of writing and rewriting sets of fictitious transactions did not appeal; and in part to the seemingly woeful lack on the part of many so-called accountancy course graduates, with whom the author has come into contact, of comprehending and recognizing fundamental principles when encountered upon a ledger under audit. Many of these latter were able to journalize correctly almost all types of transactions, but after a journal entry had been posted and the posted entry drawn to their attention under a different set of circumstances, they failed in interpreting it, in determining whether it had been made correctly, and in pointing out its effect upon the balance sheet or upon the statement of profit and loss. The author has endeavored, therefore, to set forth a fundamental principle to the end that, if this principle was thoroughly understood, it could be recognized regardless of the circumstances under which it might be encountered. Many of the questions are taken from the past examinations of the Royal Society of Arts, the Association of Certified and Corporate Accountants, the Society of Incorporated Accountants, and the Institute of Chartered Accountants. This book is divided into 19 chapters and begins with a brief introduction to the double entry system of accounting. Considerable chapters are devoted to the Accounting techniques concerning the management of different types of accounts, receipts, payments, and expenditures. Other chapters examine the validity of the principles involved and of the limitations of the conventions. This text is based upon the conviction that the oft-quoted distinction between theory and practice is disastrously misleading. It demonstrates that good theory and good practice are inseparable. This book will prove useful to accountants and accounting students.

Excerpt from Accounting Principles and Practice, Vol. 2 Volume II covers the second semester work of the first year of a collegiate course in accounting. It presents briefly in fifteen chapters, with questions and problems, the principles underlying record construction, accounting for partnerships, branches, consignments, and joint ventures, and the control of manufacturing records on the general books. Since the author has outlined in considerable detail, in the first volume of this series, his aims and purposes in the presentation of the material covered in both volumes, it is necessary merely to add here that Volume II has been prepared with these ends in view, and is in every way a

direct continuation of Volume I. About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books.
