This book provides a comprehensive and up-to-date review of all aspects of childhood Acute Lymphoblastic Leukemia, from basic biology to supportive care. It offers new insights into the genetic pre-disposition to the

condition and discusses how response to early therapy and its basic biology are utilized to develop new prognostic stratification systems and target therapy. Readers will learn about current treatment and outcomes, such as immunotherapy and targeted therapy approaches. Supportive care and management of the condition in resource poor countries are also discussed in detail. This is an indispensable guide for research and laboratory scientists, pediatric hematologists as well as specialist nurses involved in the care of childhood leukemia.

How physicians in this century wielded medical technology to define disease,

carve out medical specialties, and shape political agendas. Winner of the American Public Health Association Arthur Viselwear Prize In Drawing Blood, medical historian Keith Wailoo uses the story of blood diseases to explain how physicians in this century wielded medical technology to define disease, carve out medical specialties, and shape political agendas. As Wailoo's account makes clear, the seemingly straightforward process of identifying disease is invariably influenced by personal, professional, and social factors—and as a result produces not only clarity and precision but also bias and outright error. Drawing Blood reveals the ways in which physicians and patients as well as the diseases themselves are simultaneously shaping

and being shaped by technology, medical professionalization, and society at large. This thought-provoking cultural history of disease, medicine, and technology offers an important perspective for current discussions of HIV and AIDS, genetic blood testing, prostate-specific antigen, and other important issues in an age of technological medicine. "Makes clear that the high stakes involved in medical technology are not just financial, but moral and far reaching. They have been harnessed to describe clinical phenomena and to reflect social and cultural realities that influence not only medical treatment but self-identity, power, and authority."—Susan E. Lederer, H-Net Humanities & Social Sciences On Line "Wailoo's masterful

study of hematology and its disease discourse is a model of interdisciplinarity, combining cultural analysis, social history, and the history of medical ideas and technology to produce a complex narrative of disease definition, diagnosis, and treatment . . . He reminds us that medical technology is a neutral artifact of history. It can be, and has been, used to clarify and to cloud the understanding of disease, and it has the potential both to constrain and to emancipate its subjects."—Regina Morantz-Sanchez, *Journal of Interdisciplinary History* Core Privileges Springer Science & Business Media
The increase in new medical technology and experimental treatments has made the study of medical ethics essential for

practitioners on all levels. This book brings together experts in the fields of pediatric hematology/oncology, ethics, and law to examine legal and ethical issues surrounding the treatment of children with cancer or blood disease. The contributors present thoughtful discussions of ethical considerations of such practices as bone marrow transplantation, caring for hemophiliacs, preventing sickle cell disease, informing patients of treatment side effects, the statistical design of clinical trials, and the activities of the Institutional Review Board.

“The editors...have done an outstanding job of presenting...complex information in a lucid manner - this book is a must-

read for the global community of aspiring students and neuro-oncology practitioners.” Amar Gajjar, MD in the Foreword This is a succinct introduction to pediatric neuro-oncology. It summarizes the key advances in molecular biology that have helped transform this rapidly evolving field and provides up-to-date coverage of major and emerging treatment modalities as well as supportive care. Separate chapters present each kind of pediatric brain cancer and its diagnosis and treatment. As more children survive brain cancer, the importance of quality of life issues and helping survivors to cope with the neuropsychological impact and long-term effects of current therapies has come into sharper focus; these topics are also addressed in the

book, as are palliative care and pediatric neuro-oncology in countries with limited resources. The book is aimed at trainees and practitioners who seek an up-to-date text in pediatric neuro-oncology that is both comprehensive and concise.

Since 1990, an efficient and cost effective way to prepare for the American Board of Pediatrics, Pediatric Hematology/Oncology certification exam. All major areas of the exam are covered, including more than: ? 120 questions on the hematology of the newborn ? 200 questions on platelets and coagulation ? 300 questions on red blood cells ? 600 questions on pediatric oncology Each question lists related references for easy access. Who will

benefit? ? Fellows preparing for the American Board of Pediatrics, Pediatric Hematology/Oncology certification exam. ? Pediatric Hematologists/Oncologists taking the recertification exam. ? Medical educators seeking to enrich the resources available in their hospital or medical school libraries. How will it help? ? Provides quick review and facilitates rapid assessment of areas of strength and weakness. ? Offers a cost effective and time efficient way to prepare for the exam. ? Allows you to move at your own pace. ? Contents fully updated with extensive references from the latest textbooks and journals. ? Includes coverage of the uses of new information on microRNA, epigenetic therapy, telomeres, telomerase, survivin, and

expanded application of targeted therapy for a variety of neoplasms. Review questions are based on information presented in the latest editions of: ? Nathan and Oski's Hematology of Infancy and Childhood (Orkin, Nathan) ? Oncology of Infancy and Childhood (Orkin, Fisher) ? Stranahan Distinguished Professor of Pediatrics, Harvard Medical School, commenting on the 2007 edition *Principles and Practice of Pediatric Oncology* National Academies Press Structured to be a companion to the recently published Handbook of Transfusion Medicine, the Handbook of Pediatric Transfusion Medicine is dedicated to pediatric hematology-oncology and transfusion medicine, a field which remains ambiguous and which has generated few comprehensive texts. This book stands alone as one of the few texts that addresses transfusion

issues specific to pediatric medicine. Written in an eminently readable style, this authoritative handbook is a requirement for any pediatric physician or caregiver. - Neonatal and fetal immune response and in utero development issues - Blood compatability and pre-transfusion testing issues specific to pediatric and neonatal transfusion - Therapeutic apheresis including red blood cell exchange and prophylactic chronic erythrocytapheresis for sickle cell patients - Also includes a section that concentrates on the consent, quality and legal issues of blood transfusion and donation

This textbook is the first to focus on comprehensive interdisciplinary care approaches aimed at enhancing the wellbeing of children with cancer and their families throughout the illness experience. Among the topics addressed are the epidemiology of pediatric cancer distress, including physical, emotional, social, and spiritual dimensions; the role of the interdisciplinary team; communication and advance care planning; symptom prevention and management; care at the end of life; family bereavement care; and approaches to ease clinician distress. The contributing authors are true experts and provide guidance based on the highest available level of evidence in the field. The book has not only an

interdisciplinary but also an international perspective; it will appeal globally to all clinicians caring for children with cancer, including physicians, nurses, psychosocial clinicians, and chaplains, among others.

This volume provides a comprehensive and world-class review of the field of histiocytic neoplasms and hemophagocytic lymphohistiocytosis (HLH). It reviews all the advances in the field of histiocytoses during the last ten years, particularly with regards to the genomic findings in LCH and other histiocytic neoplasms and the new suggested classification of the histiocytic disorders. Additionally, it features a state-of-the art update on the most

recent treatment strategies for LCH, including the results of the last LCH-III international trial, salvage therapies such as reduced-intensity conditioning (RIC) stem cell transplant (SCT), and targeted therapies with BRAF and MEK inhibitors, as well as the challenging cases of CNS-neurodegenerative LCH and its therapeutic perspectives. For primary and secondary HLH the book updates the most recent genetic and pathophysiological findings, including macrophage-activation syndrome (MAS), and includes a special chapter on HLH in adults. Treatment chapters encompass therapy for newly diagnosed HLH and refractory disease as well as stem-cell transplantation and novel therapies. The text also highlights the most recent advances in the treatment of the

uncommon histiocytic disorders, such as Erdheim-Chester disease (ECD), Juvenile xanthogranuloma (JXG) and JXG-like conditions, Rosai-Dorfman disease (RDD), and the very rare malignant histiocytoses. Written by international experts in the field, Histiocytic Disorders is a valuable resource for clinicians, researchers, fellows and residents who are interested in or manage histiocytic disorders in children and adults.

Integrative Strategies For Cancer Patients: A Practical Resource For Managing The Side Effects Of Cancer Therapy Springer

Typically, manuals of pediatric hematology-oncology are written by specialists from high-income countries, and usually target an audience with a sub-specialist level of training, often

assisted by cutting-edge diagnostic and treatment facilities. However, approximately 80% of new cases of cancer in children appear in mid- and low-income countries. Almost invariably, general practitioners or general pediatricians without special training in oncology will look after children with malignancies who enter the health care system in these countries. The diagnostic facilities are usually limited, as are the treatment options. The survival figures in these conditions are somewhere below 20%, while in high-income countries they are in the range of 80% for many childhood cancers. *Pediatric Hematology-Oncology in Countries with Limited Resources* is the only book of its kind to provide specific guidance applicable to limited resource

settings and builds up from the foundation of general practitioner or general pediatrician competence. Written and edited by leaders in the field, this manual educates physicians on the essential components of the discipline, filtered through the experience of specialists from developing countries, with immediate applicability in the specific healthcare environment in these countries.

Hematology Board Review: Blueprint Study Guide and Q&A is a concise, outline-based study guide covering all topics that appear on the Hematology Certification Exam. The book includes all topics listed in the American Board of

Internal Medicine (ABIM) blueprint as essential material for the exam and highlights topic areas that are often found on the test. For hematology and oncology fellows as well as practicing clinicians needing a refresher before taking MOC, this handy study guide provides succinct overviews of all blood disorders, syndromes and diseases with practice questions on the go. Each disorder or disease-based chapter provides the same structure for ease of use beginning with the epidemiology, and followed by the etiology and risk factors, signs and symptoms, diagnostic criteria, indications for treatment, prognostic factors, treatment recommendations, and special considerations. The authors provide the most accurate and up-to-date

information, including well-established treatment regimens for a variety of blood disorders, including iron disorders, bone marrow failure syndromes, platelet and megakaryocytic disorders, hemostasis, thrombosis, and hematologic malignancies. Later chapters review other major subspecialty areas found on the exam including transfusion medicine and hematopoietic cell transplantation. With 200 board-style questions and answers with detailed rationales, Hematology Board Review is the go-to, quick review for any trainee preparing for initial certification and for hematologists or oncologists preparing for recertification. Key Features: Includes 200 board-style questions and answers with rationales Provides key point summaries of each

topic area for quick study and easy recall
Thorough coverage of hematologic malignancies, blood disorders, transfusion medicine, hematopoietic cell transplantation, and standard treatment regimens
Tables providing key data and information related to staging, treatment options, and disease classifications
