Crime and the fear of crime are issues high in public concern and on political agendas in most developed countries. This book takes these issues and relates them to the contribution that urban planners and participative planning processes can make in response to these problems. Its focus is thus on the extent to which crime opportunities can be prevented or reduced through the design, planning and management of the built environment. The perspective of the book is transatlantic and comparative, not only because ideas and inspiration in this and many other fields increasingly move between countries but also because there is a great deal of relevant theoretical material and practice in both the USA and the UK which has not previously been pulled together in this systemic manner.

The Explicit Body in Performance interrogates the avant-garde precedents and theoretical terrain that combined to produce feminist performance art. Among the many artists discussed are: * Carolle Schneemann * Annie Sprinkle * Karen Finley * Robbie McCauley * Ana Mendieta * Ann Magnuson * Sandra Bernhard * Spiderwoman Rebecca Schneider tackles topics ranging across the 'post-porn modernist movement', New Right censorship, commodity fetishism, perspectival vision, and primitivism. Employing diverse critical theories from Benjamin to Lacan to postcolonial and queer theory, Schneider analyses artistic and pop cultural depictions of the explicit body in late commodity capitalism. The Explicit Body in Performance is complemented by extensive photographic illustrations and artistic productions of postmodern feminist practitioners. The book is a fascinating exploration of how these artists have wrestled with the representational structures of desire.

What are public health services? Countries across Europe understand what they are, or what they should include, differently. This study describes the experiences of nine countries, detailing the ways they have opted to organize and finance public health services and train and employ their public health workforce. It covers England, France, Germany, Italy, the Netherlands, Slovenia, Sweden, Poland and the Republic of Moldova, and aims to give insights into current practice that will support decision-makers in their efforts to strengthen public health capacities and services. Each country chapter captures the historical background of public health services and the context in which they operate; sets out the main organizational structures; assesses the sources of public health financing and how it is allocated; explains the training and employment of the public health workforce; and analyzes existing frameworks for quality and performance assessment. The study reveals a wide range of experience and variation across Europe and clearly illustrates two fundamentally different approaches to public health services: integration with curative health services (as in Slovenia or Sweden) or organization and provision through a separate parallel structure (Republic of Moldova). The case studies explore the context that explain this divergence and its implications. This study is the result of close collaboration between the European Observatory on Health Systems and Policies and the WHO Regional Office for Europe, Division of Health Systems and Public Health. It accompanies two other Observatory publications Organization and financing of public health services in Europeand The role of public health organizations in addressing public health problems in Europe: the case of obesity, alcohol and antimicrobial resistance(both forthcoming).

Environmental Health and the U.S. Federal System John Wiley & Sons
Published in 2008, the first volume of Public Health focused on issues from the dawn of western civilization through the Progressive era. Volume 2 defines the public health challenges of the twentieth century--this important reference covers not only how the discipline addressed the problems of disease, but how it responded to economic, environmental, occupational, and social factors that impacted public health on a global scale. Major illnesses such as cancer, HIV, and tuberculosis are addressed, along with lifestyle concerns, such as tobacco and nutrition. Chapters also explore maternal-child and women's health, dental public health, health economics and ethics, and the role of philanthropy. Each chapter begins with an in-depth introduction, followed by three original articles that illustrate the problem. The volume is enhanced with a detailed chronology of public health events, as well as appendices that contain many of the original documents that ushered public health into the new millennium.

Studyguide for Introduction to Public Health by Mary-Jane Schneider, ISBN 9780763763817 Introduction to Public Health Nationalism, in China as much as elsewhere, is today adopted, filtered, transformed, enhanced, and accelerated through digital networks. And as we have increasingly seen, nationalism in digital spheres interacts in complicated ways with nationalism "on the ground". If we are to understand the social and political complexities of the twenty-first century, we need to ask: what happens to nationalism when it goes digital? In China's Digital Nationalism, Florian Schneider explores the issue by looking at digital China first hand, exploring what search engines, online encyclopedias, websites, hyperlink networks, and social media can tell us about the way that different actors construct and manage a crucial topic in contemporary Chinese politics: the protracted historical relationship with neighbouring Japan. Using two cases, the infamous Nanjing Massacre of 1937 and the ongoing disputes over islands in the East China Sea, Schneider shows how various stakeholders in China construct networks and deploy power to shape nationalism for their own ends. These dynamics provide crucial lessons on how nation states adapt to the shifting terrain of the digital age and highlight how digital nationalism is today an emergent property of complex communication networks.

Digital Food Activism is a new edited volume that investigates

how digital media technologies are transforming food activism and consumers' engagements with food, eating, and food systems. Bringing together critical food studies, economic anthropology, digital sociology, and science and technology studies, Digital Food Activism offers innovative multi-disciplinary analyses of food activist practices on social media, mobile apps, and hybrid online and offline alternative spaces. With chapters that focus on diverse digital platforms, food-related issues, and geographic locales, this volume reveals how platforms, programmers, and consumers are becoming key mediators of the mandate of food corporations and official governing actors. Digital Food Activism thereby suggests that emerging forms of activism in the digital era hold the potential to reshape the ethics, aesthetics, and patterns of food consumption.

Economic Principles and Problems: A Pluralistic Introduction offers a comprehensive introduction to the major perspectives in modern economics, including mainstream and heterodox approaches. Through providing multiple views of markets and how they work, it leaves readers better able to understand and analyze the complex behaviors of consumers, firms, and government officials, as well as the likely impact of a variety of economic events and policies. Most principles of economics textbooks cover only mainstream economics, ignoring rich heterodox ideas. They also lack material on the great economists, including the important ideas of Adam Smith, Karl Marx, Thorstein Veblen, John Maynard Keynes, and Friedrich Hayek. Mainstream books tend to neglect the kind of historical analysis that is crucial to understanding trends that help us predict the future. Moreover, they focus primarily on abstract models more than existing economic realities. This engaging book addresses these inadequacies. Including explicit coverage of mainstream economics and the major heterodox schools of economic thought—institutionalists, feminists, radical political economists, post-Keynesians, Austrians, and social economists—it allows the reader to choose which ideas they find most compelling in explaining modern economic realities. Written in an engaging style and focused on real-world examples, this textbook brings economics to life. Multiple examples of how each economic model works, coupled with critical analysis of the assumptions behind them, enable students to develop a sophisticated understanding of the material. Digital supplements are also available for students and instructors. Economic Principles and Problems offers the most contemporary and complete package for any pluralist economics class.

Conrad and Nature is the first collection of critical essays examining nature and the environment in Joseph Conrad's writings. Together, these essays by established and emerging scholars reveal both the crucial importance of nature in Conrad's work, and the vital, ongoing relevance of Conrad's treatment of the environment in our era of globalization and climate change. No richer subject matter for an environmentally-engaged criticism can be found than the Conradian contexts and themes under investigation in this volume: island cultures, colonial occupations, storms at sea, mining and extraction, inconstant weather, ecological collapse, and human communities competing for resources. The 17 essays collected here —13 new essays, and 4 excerpts from classic works of Conradian scholarship -- consolidate some of the most important voices and perspectives on Conrad's relation to the natural world, and open new avenues

for Conradian and environmental scholarship in the 21st century.

Africa has emerged as a prime arena of global health interventions that focus on particular diseases and health emergencies. These are framed increasingly in terms of international concerns about security, human rights, and humanitarian crisis. This presents a stark contrast to the 1960s and '70s, when many newly independent African governments pursued the vision of public health "for all," of comprehensive health care services directed by the state with support from foreign donors. These initiatives often failed, undermined by international politics, structural adjustment, and neoliberal policies, and by African states themselves. Yet their traces remain in contemporary expectations of and yearnings for a more robust public health. This volume explores how medical professionals and patients, government officials, and ordinary citizens approach questions of public health as they navigate contemporary landscapes of NGOs and transnational projects, faltering state services, and expanding privatization. Its contributors analyze the relations between the public and the private providers of public health, from the state to new global biopolitical formations of political institutions, markets, human populations, and health. Tensions and ambiguities animate these complex relationships, suggesting that the question of what public health actually is in Africa cannot be taken for granted. Offering historical and ethnographic analyses, the volume develops an anthropology of public health in Africa. Contributors:Hannah Brown, P. Wenzel Geissler, Murray Last, Rebecca Marsland, Lotte Meinert, Benson A. Mulemi, Ruth J. Prince, Noémi Tousignant, and Susan Reynolds Whyte

This book critically reflects on the challenges faced by refugee aspirant professionals in securing employment and the ways in which professional intercultural competence development and attendant language learning practices can help facilitate the professional (re)integration in these communities. The volume draws on data from a large-scale research project that saw refugee aspirant professionals, researchers, and volunteer language teachers working together to develop and operationalise key intercultural skills needed for professional employment in the UK, the Netherlands, and Austria, ultimately culminating in a toolkit of free online resources co-designed to meet the needs of communities and facilitate the development of these practices across Europe. Detailed analyses of the data drawn from the project allow for critical reflections on co-production in intercultural spaces and researchers' positionality, power relations, and ethical choices in multilingual contexts. Taken together, the book offers both theoretical and practical considerations for application beyond the European context

toward better facilitating the professional (re)integration of migrant communities on a more global scale. The book will be of particular interest to students and researchers in intercultural communication, refugee studies, and language education.
Making and Unmaking Public Health in Africa Jones & Bartlett Learning
Although the seemingly apocalyptic scale of the World Trade Center disaster continues to haunt people across the globe, it is only the most recent example of a city tragically wounded. Cities are, in fact, perpetually caught up in cycles of degeneration and renewal. As with the WTC, from time to time these cycles are severely ruptured by a sudden, unpredictable event. In the wake of recent terrorist activities, this timely book explores how urban populations are affected by wounds inflicted through violence, civil wars, overbuilding, drug trafficking, and the collapse of infrastructures, as well as natural disasters such as earthquakes. Mexico City, New York, Beirut, Belfast, Bangkok and Baghdad are just a few examples of cities riddled with problems that undermine, on a daily basis, the quality of urban life. What does it mean for urban dwellers when the infrastructure of a city collapses transport, communication grids, heat, light, roads, water, and sanitation? What are the effects of foreign investment and huge construction projects on urban populations and how does this change the look and character of a city? How does drug trafficking intersect with class, race, and gender, and what impact does it have on vulnerable urban communities? How do political corruption and mafia networks distort the built environment? Drawing on in-depth case studies from across the globe, this book answers these intriguing questions through its rigorous consideration of changing global and national contexts, social movements, and corrosive urban events. Adopting a grass roots up approach, it places emphasis on peoples experiences of uneven development and inequality, their engagement with memory in the face of continual change, and the relevance of political activism to bettering their lives. It is especially attentive to the historical interaction of particular cities with wider political and economic forces, as these interactions have shaped local governance over time.

A Transatlantic Perspective Cram101
From clean drinking water, to seat belts, to immunizations, the impact of public health on every individual is undeniable. For undergraduates, an understanding of the foundations of public health is an essential step toward becoming an educated citizen. Public Health 101 provides a big-picture, population perspective on the determinants of health and disease and the tools available to protect and promote health. It examines the full range of options for intervention including use of the healthcare system, the public health system, and society-wide systems such as laws and taxation.

Big Data, gathered together and re-analysed, can be used to form endless variations of our persons - so-called 'data doubles'. Whilst never a precise portrayal of who we are, they unarguably contain glimpses of details about us that, when deployed into various routines (such as management, policing and advertising) can affect us in many ways. How are we to deal with Big Data? When is it beneficial to us? When is it harmful? How might we regulate it? Offering careful and critical analyses, this timely volume aims to broaden well-informed, unprejudiced discourse, focusing on: the tenets of Big Data, the politics of governance and regulation; and Big Data practices, performance and resistance. An interdisciplinary volume, The Politics of Big Data will appeal to undergraduate and postgraduate students, as well as postdoctoral and senior researchers interested in fields such as Technology, Politics and Surveillance.
