The history of electronics can be traced back to 1874 when Irish scientist George Johnstone Stoney (1826-1911) suggested that electricity must be "built" out of tiny electrical charges. Twenty years later, he coined the name "electron". Interest in electronics gradually increased over the decades following Stoney's discovery. In 1947 the transistor was invented by William Shockley, John Bardeen and Walter Brattain at Bell Labs, which revolutionized the computer industry by replacing fragile, power hungry valves with much smaller and reliable devices. During the 1950s and 60s, computers became more powerful and smaller, eventually leading to the introduction of the home personal computer (PC) in the 1970s. Today, electronic devices are all around us ... computers, cell (mobile) phones, televisions, calculators, hearing aids, and cars are just a few examples of devices that form part of everyday life in the 21st century and which make use of electronics. The purpose of this book is to introduce the subject of electronics to people who have no prior knowledge of the subject. If you don't know what a prototyping breadboard is, or have no idea what a resistor or diode do, then this book will help you to gain a basic understanding of what electronics components exist and what they are used for. You will also learn how to combine such components to build electronics circuits. Although there is a logical flow in the way that information is presented, you can pretty much jump around from chapter to chapter as it suits you, picking out the material that is of most interest. The book is split into two parts - the first introduces the subject of electronics, and the second contains a range of simple circuits to design and build. Part 1 - Getting Started with Electronics \* Chapter 1 - Electricity and Electric Circuits \* Chapter 2 - Equipment You Need in Your Electronics Laboratory \* Chapter 3 - Safety \* Chapter 4 - Resistors \* Chapter 5 - Capacitors \* Chapter 6 - Diodes \* Chapter 7 - Light Emitting Diodes (LEDs) \* Chapter 8 - Transistors \* Chapter 9 - Integrated Circuits \* Chapter 10 - The 555 Timer \* Chapter 11 - Combining Electronics with Software Part 2 - Designing and Building Electronics Circuits \* Chapter 12 - Using an Electronics Prototyping Breadboard \* Chapter 13 - Illuminating a Single LED \* Chapter 14 - Using a Multimeter to Measure Voltage, Current and Resistance \* Chapter 15 - Connecting Multiple LEDs in Series \* Chapter 16 - Connecting Multiple LEDs in Parallel \* Chapter 17 - Using a Variable Resistor to Control the Speed of a Small DC Motor \* Chapter 18 - Using Wind Power \* Chapter 19 - Using a Transistor to Switch On an LED \* Chapter 20 - Charging and Discharging a Capacitor \* Chapter 21 - Building a Light Sensor - Night Light \* Chapter

Speaking at a 1913 National Geographic Society gala, Hiram Bingham III, the American explorer celebrated for finding the "lost city" of the Andes two years earlier, suggested that Machu Picchu "is an awful name, but it is well worth remembering." Millions of travelers have since followed Bingham's advice. When Bingham first encountered Machu Picchu, the site was an obscure ruin. Now designated a UNESCO World Heritage Site, Machu Picchu is the focus of Peru's tourism economy. Mark Rice's history of Machu Picchu in the twentieth century—from its "discovery" to today's travel boom—reveals how Machu Picchu was transformed into both a global travel destination and a powerful symbol of the Peruvian nation. Rice shows how the growth of tourism at Machu Picchu swayed Peruvian leaders to celebrate Andean culture as compatible with their vision of a modernizing nation. Encompassing debates about nationalism, Indigenous peoples' experiences, and cultural policy—as well as development and globalization—the book explores the contradictions and ironies of Machu Picchu's transformation. On a broader level, it calls attention to the importance of tourism in the creation of national identity in Peru and Latin America as a whole.

This book deals with the various ways Netflix reconceptualises television as part of the process of TV IV. As television continues to undergo a myriad of significant changes, Netflix has proven itself to be the dominant force in this development, simultaneously driving a number of these changes and challenging television's existing institutional structures. This comprehensive study explores the pre-history of Netflix, the role of binge-watching in its organisation and marketing, and Netflix's position as a transnational broadcaster. It also examines different concepts of control and the role these play in the history of ancillary technologies, from the remote control to binge-watching as Netflix's iteration of giving control to the viewers. By focusing on Netflix's relationship with the linear television schedule, its negotiations of quality and marketing, as well as the way Netflix integrates into national media systems, Netflix and the Re-invention of Television illuminates the importance of Netflix's role within the processes of TV IV.
