The Prose Brut and Other Late Medieval Chronicles World
 Scientific

The science and practice of psychology has evolved around the world on different trajectories and timelines, yet with a convergence on the recognition of the need for a human science that can confront the challenges facing the world today. Few would argue that the standard narrative of the history of psychology has emphasized European and American traditions over others, but in today's global culture, there is a greater need in psychology for international understanding. This volume describes the historical development of psychology in countries throughout the world. Contributors provide narratives that examine the political and socioeconomic forces that have shaped their nations' psychologies. Each unique story adds another element to our understanding of the history of psychology. The chapters in this volume remind us that there are unique contexts and circumstances that influence the ways in which the science and practice of psychology are assimilated into our daily lives. Making these contexts and circumstances explicit through historical research and writing provides some promise of greater international insight, as well as a better understanding of the human condition.

From Cooperative Cells to the Post-Cellular Relay Carpet
 Bloomsbury Publishing

Essays on the medieval chronicle tradition, shedding light on history writing, manuscript studies and the history of the book, and the post-medieval reception of such texts. The histories of chronicles composed in England during the fourteenth and fifteenth centuries and onwards, with a focus on texts belonging to or engaging with the Prose Brut tradition, are the focus of this volume. The contributors examine the composition, dissemination and reception of historical texts written in Anglo-Norman, Latin and English, including the Prose Brut chronicle (c. 1300 and later), Castleford's Chronicle (c. 1327), and Nicholas Trevet's Les Cronicles (c. 1334), looking at questions of the processes of writing, rewriting, printing and editing history

Iran's Nuclear Programme Springer Science & Business Media

This volume examines the process by which Keynes' message got interpreted and re-interpreted and thus separated into a Left and a Right political-economic stream. Archival evidence is used to shed a fresh light on many of the controversies (and colourful characters) of the Keynesian tradition.

Assessment of water sources and quality for livestock and farmers in the Rift Valley area of Ethiopia: Implications for health and food safety Edward Elgar Publishing

I enjoyed reading this book, which draws together a selection of case studies in entrepreneurship and innovation from eight new EU member countries that are still in the process of turbulent social and economic change. . . Each case is fascinating reading and in many of the studies the vibrant nature of the entrepreneurial change-driver shines through. . . the book is aimed at academics and researchers of entrepreneurship as well as undergraduate and postgraduate students of international business and entrepreneurship, as well as practitioners carrying out business in the transition economies. I would agree with that, the case studies do bring out the exciting and challenging nature of what has been, and can be achieved. . . there is much sound material here to stimulate both insight, and detailed classroom discussions. I would certainly recommend the book for a library purchase. . . it may well be a very useful purchase for researchers and students of the selected case countries. Lorraine Warren, International Journal of Entrepreneurial Behaviour and Research This volume offers insights into ways entrepreneurs innovate and adapt to political-economic structural changes. Detailed case studies illustrate how the adoption of new technology, creation of hybrid social and economic mission ventures and strategic re-orientation led to success in these transition economies. The stories of how these teams pooled resources, persevered and devised new approaches to innovation by creating something new or internationalizing gives us a sense of the new entrepreneurial approaches needed to succeed in this region. Given there were few role models and road maps, these entrepreneurs had to learn by doing. Their stories are inspirational and provide valuable lessons for entrepreneurial success in the wake of turbulent political-economic restructuring. Candida G. Brush, Babson College, US This original selection of case studies from eight new EU member countries looks at the ability of entrepreneurs to develop innovative and successful firms in an environment of turbulent social and economic change. The Cutting Edge focuses on the innovative potential that these transition country environments provide and how entrepreneurs have been able to convert these possibilities into successful businesses. The contributors highlight specific aspects of the interplay between the institutional setting and the environment. They also elucidate the individual characteristics of the entrepreneur that create an enabling context for innovative behaviour to develop and grow, drawing attention to the opportunities and constraints offered in each environment. This book provides invaluable insights for academics and researchers of entrepreneurship as well as undergraduate and postgraduate students of international business and entrepreneurship. It will also provide a stimulating and important read for people conducting business in Europe. **Searching for Scientific Womanpower** Springer Darwin is an emperor who has no clothes— but it takes a brave

man to say so. Jonathan Wells, a microbiologist with two Ph.D.s (from Berkeley and Yale), is that brave man. Most textbooks on evolution are written by Darwinists with an ideological ax to grind. Brave dissidents—qualified scientists—who try to teach or write about intelligent design are silenced and sent to the academic gulag. But fear not: Jonathan Wells is a liberator. He unmasks the truth about Darwinism— why it is wrong and what the real evidence is. He also supplies a revealing list of "Books You're Not Supposed to Read" (as far as the Darwinists are concerned) and puts at your fingertips all the evidence you need to challenge the most closed-minded Darwinist.

Technical Communication The Politically Incorrect Guide to Darwinism and Intelligent Design

The emerging shape of the post Cold War world provides evidence that rather than diminishing, the profound intersection of political ideology and religious forms of belief is an ever more potent force in world affairs. This volume offers both theoretic underpinnings, and a comparative analysis that elucidates this potent and dangerous phenomenon.

SWE Elsevier Health Sciences Parameterized complexity is currently a thriving field in complexity theory and algorithm design. A significant part of the success of the field can be attributed to Michael R. Fellows. This Festschrift has been published in honor of Mike Fellows on the occasion of his 60th birthday. It contains 20 papers that showcase the important scientific contributions of this remarkable man, describes the history of the field of parameterized complexity, and also reflects on other parts of Mike Fellows's unique and broad range of interests, including his work on the popularization of discrete mathematics for young children. The volume contains several surveys that introduce the reader to the field of parameterized complexity and discuss important notions, results, and developments in this field.

Rwanda 1994 Boydell & Brewer

Imagining the Elephant is a biography of Allan MacLeod Cormack, a physicist who was awarded the Nobel Prize for Medicine in 1979 for his pioneering contributions to the development of the computer-assisted tomography (CAT) scanner, an honor he shared with Godfrey Hounsfield. A modest genius who was also a dedicated family man, the book is a celebration of Cormack's life and work. It begins with his ancestral roots in the far north of Scotland, and then chronicles his birth and early years in South Africa, his education at the University of Cape Town (UCT) and Cambridge University, and his subsequent academic appointments at UCT and Tufts University in Boston, USA. It details his discovery of the problem at Cape Town in 1956, traces his scientific footsteps all the way to Stockholm in December 1979, and then extends the odyssey to his pursuits beyond the Nobel Prize. Contents:From John O'Groats to Jo'burgOn the Slopes

of Table Mountain Physics and Friends at Cambridge Return to the Fairest Cape A New Beginning in Boston Finding Radon and His Transform On the Road to Stockholm Citizen of the World At Home in Massachusetts Appendices: Allan Cormack's Publications Nobel Lecture Presentation of Nobel Prize Man and Science in the 21st Century A Teenager's Odyssey Readership: Anyone with a university or even a science-based high school education; scientifically informed readers without specialist knowledge in the topic of the book, but who wish to understand how one particular scientist pursued his career. Keywords: Computer Tomography; CAT Scanner; Nobel Prize; Biography; Medical Imaging; High Energy Physics; Radiology Key Features: CAT-scanner technology has had a huge impact on the practice of medicine in the past quarter century, and its genesis — as well as the lives of those who brought it to fruition — has important lessons for the development of other technologies in the future. Although books and articles have been written about the development of the CAT scanner, no one has yet written a book about either Cormack or Hounsfield. In line with the book's focus on education, royalties from the book will be donated to needy students at UCT. Reviews: "The introduction of the CAT scanner led to a major revolution in clinical medicine, and subsequent developments of the underlying principle of tomography and associated brain imaging techniques has led to further crucial medical developments as well as important discoveries concerning the way the brain functions. This meticulous biography sets out in detail the life of Alan Cormack, who first conceived of the use of tomography in medical contexts, and demonstrated it in a pilot experiment at the University of Cape Town in September 1957. The author takes great pains to set out this important story in its full personal, historical, and scientific context, including the award of the Nobel Prize to Cormack in 1979. The book provides a welcome exposition of the nature of scientific discovery in a particular important case." George F R Ellis University of Cape Town, South Africa "This book will especially fascinate readers who are interested in how a rotating series of images can create cross-sectional images of the body ... Those interested in the history of science are indebted to Vaughan for producing this wonderful biography of Allan Cormack and for creating an expert and vivid description of one of the two streams of discovery that led to the invention of computed tomography." The New England Journal of Medicine

Photoinduced Modifications of the Nonlinear Optical Response in Liquid Crystalline Azopolymers Springer

The book presents the winners of the Abel Prize in mathematics for the period 2013–17: Pierre Deligne (2013); Yakov G. Sinai (2014); John Nash Jr. and Louis Nirenberg (2015); Sir Andrew Wiles (2016); and Yves Meyer (2017). The profiles feature autobiographical information as well as a scholarly description of each mathematician's work. In addition, each profile contains a Curriculum Vitae, a complete bibliography, and the full citation from the prize committee. The book also includes photos for the period 2003–2017 showing many of the additional activities connected with the Abel Prize. As an added feature, video interviews with the Laureates as well as videos from the prize ceremony are provided at an accompanying website (<http://extras.springer.com/>). This book follows on The Abel Prize: 2003–2007. The First Five Years (Springer, 2010) and The Abel Prize 2008–2012 (Springer 2014), which profile the work of the previous Abel Prize winners.

A Collection of Documents Pluto Press (UK)

Service orientation is emerging nowadays at multiple organizational levels in enterprise business, and it leverages technology in response to the growing need for greater business integration, flexibility and agility of manufacturing enterprises. The Service Oriented Architecture (SOA) analysed throughout the book represents a technical architecture, a business modelling concept, a type of infrastructure, an integration source and a new way of viewing units of automation within the enterprise. The primary goal of SOA is to align the business world with the world of information technology in a way that makes both more effective. The service value creation model at enterprise level consists of using a Service Component Architecture for business

process applications, based on entities which handle services. In this view a service is a piece of software encapsulating the business/control logic or resource functionality of an enterprise entity that exhibits an individual competence and responds to a specific request to fulfil a local (operation) or global objective (batch production). The value creation model is based on a 2-stage approach: • Agentification: complex manufacturing processes are split in services provided by informational agents which are discovered, accessed and executed. This leads to a modular, reusable, agile and easy integrate integration. • Holonification: holons link the material flow and physical entities of the manufacturing processes with the informational part (IT services realized by distributed intelligence) facilitating thus traceability the developing of flexible control systems. This book gathers contributions from scientists, researchers and industrialists on concepts, methods, frameworks and implementing issues addressing trends in the service orientation of control technology and management applied to manufacturing enterprise. This book gathers contributions from scientists, researchers and industrialists on concepts, methods, frameworks and implementing issues addressing trends in the service orientation of control technology and management applied to manufacturing enterprise.

The Politically Incorrect Guide to Darwinism and Intelligent Design Vintage Canada

Once upon a time, virtually no one in the academy thought to sue over campus disputes, and, if they dared, judges bounced the case on grounds that it was no business of the courts. Not so today. As Amy Gajda shows in this witty yet troubling book, litigation is now common on campus, and perhaps even more commonly feared. This book explores the origins and causes of the litigation trend, its implications for academic freedom, and what lawyers, judges, and academics themselves can do to limit the potential damage.

Pirates, Biologists, Tourists, and Creationists Battle for Darwin's Cradle of Evolution CRC Press

This volume provides students with accessible and easy-to-follow strategies for tackling the major types of documents, from writing reports to job applications. Interactive exercises are included to provide engaging scenarios for writing practice.

The Making of a Nazi Hero Springer

Nonlinear optical (NLO) phenomena such as frequency conversion have played a key role in the development of photonic technologies. This thesis reports a detailed study of the molecular response of a large variety of push-pull organic compounds using the Second Harmonic Generation technique, which will serve as a starting point for the investigation at the macroscopic scale of azobenzene-based liquid crystalline polymeric films and their blends with highly efficient NLO chromophores. These materials are designed with the aim of exploiting their photoaddressability in order to tailor their nonlinear behaviour. The magnitude and symmetry of their NL response was successfully controlled via light irradiation and thermal treatments. Moreover, as a specific application, the recording of efficient NLO gratings was achieved.

A Market Consistent Valuation Framework University of Arizona Press

This book presents a market-consistent valuation framework for implicit embedded options in life insurance contracts. This framework is used to perform an empirical analysis based on more than 110,000 actual and in-force life insurance policies and with a focus on the modeling of interest rates. Its results are the answer to the central question posed in the objectives: What value do the embedded options and guarantees considered have? This question is answered both absolutely and relative to the current policy reserves, from the perspective of the insurer, the policyholder and the shareholder respectively

Galapagos at the Crossroads McFarland

This compelling history of what Laura Micheletti Puaca terms "technocratic feminism" traces contemporary feminist interest in science to the World War II and early Cold War years. During a

period when anxiety about America's supply of scientific personnel ran high and when open support for women's rights generated suspicion, feminist reformers routinely invoked national security rhetoric and scientific "manpower" concerns in their efforts to advance women's education and employment. Despite the limitations of this strategy, it laid the groundwork for later feminist reforms in both science and society. The past and present manifestations of technocratic feminism also offer new evidence of what has become increasingly recognized as a "long women's movement." Drawing on an impressive array of archival collections and primary sources, Puaca brings to light the untold story of an important but largely overlooked strand of feminist activism. This book reveals much about the history of American feminism, the politics of national security, and the complicated relationship between the two.

Population Structure, Speciation and Reticulated Evolution in the Hydrothermal Vent Environments of the Eastern Pacific and Mid Atlantic Springer Science & Business Media

On 14 January 1930, Horst Wessel, a young and ambitious member of the SA was shot at close range at his home in Berlin. Although the crime was never completely solved, the murder was most likely committed by a group of communists with close ties to the city's gangland. Wessel later died from his injuries. Joseph Goebbels, whose attention had already been drawn to Wessel as a possible future Nazi leader, was the first to recognize the propaganda potential of the case. 'A young martyr for the Third Reich' he wrote in his diary on 23 February 1930 immediately after receiving the news of Wessel's death. This was the beginning of the myth-making that transformed an ordinary individual into a masculine role model for an entire generation. Two months later, thousands of people lined the streets for Wessel's funeral parade and Goebbels delivered a graveside eulogy. In the years that followed - and as Nazi power increased - Horst Wessel became the hero of the Nazi movement - with his elaborate memorial quickly becoming a site of pilgrimage. The song Die Fahne Hoch for which Wessel had written the lyrics (and which subsequently became popularly known as the Horst Wessel Song) became the official Nazi party anthem and the Berlin district of Friedrichshain, where Wessel was murdered was renamed Horst-Wessel-Stadt in his honour. Numerous biographies and films followed. Using previously unseen material, Daniel Siemens provides a fascinating and gripping account of the background to Horst Wessel's murder and uncovers how and why the Nazis made him a political hero. He examines the Horst Wessel 'cult' which emerged in the aftermath of Wessel's death and the murders of revenge, particularly against Communists, committed by the SA and Gestapo after 1933. At the same time, the story of Horst Wessel provides a portrait of the Nazi propaganda machine at its most effective and most chilling.

Books Have Their Histories : Essays in Honour of Lister M. Matheson Springer Science & Business Media

Natural History.

The News Magazine of the American Society for Microbiology Simon and Schuster

These documents record the international effort over the past three and a half years to address serious concerns regarding Iran's nuclear programme. The optimism expressed in the final document in the previous collection (2005, Cm6443, ISBN 9780101644327) has not been borne out. Iran resumed conversion activities and enrichment, and has not complied with several United Nations Security Council resolutions to suspend enrichment. International Atomic Energy Agency requests for information, access to documents and access to individuals, have not been satisfied. The documents detail the activities of the IAEA and the European Union to ensure that the international community can be confident about the real nature of Iran's nuclear activities.

Leprosy and Stigma in the South Pacific Springer

Through a rigorous critique of the dominant narrative of the Rwandan genocide, Collins provides an alternative argument to the debate situating the killings within a historically-specific context and drawing out a dynamic interplay between national and international actors.
