A Practical Guide to Conducting Pedagogical Research in Universities
Routledge

Given the increased accountability at the college and university level, one of the most promising ways for faculty at institutions of higher education to improve their teaching is to capitalize upon their skills as researchers. This book is a step-by-step guide for doing research to inform and improve teaching and learning. With background and instruction about how to engage in these methodologies—including qualitative, quantitative, and mixed methods—*Doing Research to Improve Teaching and Learning* provides examples across disciplines of how to use one's research skills to improve teaching. This

valuable resource equips faculty with the skills to collect and use different types of research evidence to improve teaching and learning in any college and university classroom. Special Features: Chapter openers highlight the questions and issues that will be addressed in each chapter. Recurring text boxes provide authentic examples from actual research studies, student work, and instructor reflections. Coverage of challenges, key successes, and lessons learned from classroom research presents a nuanced and complete understanding of the process.

Teaching For Quality Learning At University

Effective science teaching requires creativity, imagination, and innovation. In light of concerns about American science literacy, scientists and educators have struggled to teach this discipline more effectively. *Science Teaching Reconsidered*

provides undergraduate science educators with a path to understanding students, accommodating their individual differences, and helping them grasp the methods--and the wonder--of science. What impact does teaching style have? How do I plan a course curriculum? How do I make lectures, classes, and laboratories more effective? How can I tell what students are thinking? Why don't they understand? This handbook provides productive approaches to these and other questions. Written by scientists who are also educators, the handbook offers suggestions for having a greater impact in the classroom and provides resources for further research.

Being a Teacher

McGraw-Hill Education (UK)

Teaching and Learning in the Digital Age is for all those interested in considering the impact of emerging digital technologies on teaching and learning. It explores the concept of a digital age and perspectives of knowledge, pedagogy and practice within a digital context. By examining teaching with digital technologies through new learning theories cognisant of the digital age, it aims to both advance thinking and offer strategies for teaching technology-savvy students that will enable meaningful

learning experiences. Illustrated throughout with case studies from across the subjects and the age range, key issues considered include: how young people create and share knowledge both in and beyond the classroom and how current and new pedagogies can support this level of achievement the use of complexity theory as a framework to explore teaching in the digital age the way learning occurs – one way exchanges, online and face-to-face interactions, learning within a framework of constructivism, and in communities what we mean by critical thinking, why it is important in a digital age, and how this can occur in the context of learning how students can create knowledge through a variety of teaching and learning activities, and how the knowledge being created can be shared, critiqued and evaluated. With an emphasis throughout on what it means for practice, this book aims to improve understanding of how learning theories currently work and can evolve in the future to promote truly effective learning in the digital age. It is essential reading for all teachers, student

teachers, school leaders, those engaged in Masters' Level work, as well as students on Education Studies courses.

This sourcebook offers a unique summary into all that was important in primary education during the 1990s. It provides almost fifty key readings on the field which are grouped around six major topics: * learners * teachers * classrooms * curriculum * assessment * school and education policy. Over half of the readings focus on real life cases - such as pupils, teachers, classrooms or schools - as a means of conveying some of the interpersonal subtleties of teaching and learning in primary schools. At the same time, these cases highlight important current topics and debates in primary education and often provide insights into practical ways of meeting the challenges which are posed. Other articles are more explicitly analytical and provide conceptual frameworks, overviews or critiques of their fields. This is an excellent resource and guide for primary school teachers, and students studying on PGCE courses.

On Teaching and Learning

IGI Global
This book examines how teachers and students actually go about their classroom business. It carefully avoids the assumptions of policy-makers and theorists about what ought to be happening and focuses on what is happening. In doing so, Cooper and McIntyre offer: * a detailed look at how teachers are responding to the National Curriculum * a unique insight into secondary school students as learners * a grounded analysis of teaching and learning strategies drawing on the psychological theories of Bruner and Vygotsky The book follows on from Donald McIntyre's previous book Making Sense of Teaching and will be of interest to student teachers, teachers studying for advanced degrees and academics involved in teacher

education.
A Core Reflection Approach to Quality and Inspiration in Education
Routledge
Teaching and Learning from Within brings together theory, research, and practice on core reflection, an approach that focuses on people's strengths as the springboard for personal growth and serves every human being involved in education—including students, teachers, school principals, and university faculty. This approach supports the essential role of authenticity in the development of the whole person. It has been used in contexts around the world and has shown great promise in helping to re-chart the course for education and to re-think its purpose in global and democratic societies. The book looks at the current educational context and the need for core reflection; introduces the theory and its linkages to previous studies in numerous disciplines; presents various applications in multinational research and practice—with teachers, with students and schools, and with teacher educators; and highlights ongoing work in around the world along

with future plans, opportunities, and resources for professional development and research. .

A Comprehensive Guidebook for Law Schools IAP

Research on history instruction and learning is emerging as an exciting new field of inquiry. The editors prepared this volume because the field is at an important moment in its development -- a stage where there is research of sufficient depth and breadth to warrant a collection of representative pieces. The field of research on history teaching and learning connects with both traditional research on social studies and with recent cognitive analyses of domains such as mathematics and physics. However, the newer research goes beyond these activities as well. Where traditional research approaches to social studies instruction and learning have focused on curriculum, they have avoided the study of purely disciplinary features, the textual components of history and the concomitant demands, as well as the nature of various learners. Where recent cognitive

analyses of mathematics and physics have dealt with misconceptions and knowledge construction, they have avoided topics such as perspective-taking, interpretation, and rhetorical layerings. The new work, by contrast, has been concerned with these issues as well as the careful analyses of the nature of historical tasks and the nature of disciplinary and instructional explanations. The lines of research presented in these chapters are both compelling and diverse and include a range of topical questions such as: * What affects the quality of teaching? * How are historical documents interpreted in the writing of history? * How is history explained? * What are the classroom demands on an elementary school social studies teacher? * What does text accomplish or fail to accomplish in educational settings? * How do teachers think about particular topics for history teaching? Although much of the research reflects a grounding in, or the influence of, cognitive psychology, not all of it derives from that tradition. Traditions of rhetoric, curriculum

analysis, and developmental psychology are also woven throughout the chapters. The editors envision this volume as a contribution to educational research in a subject matter, and as a tool for practitioners concerned with the improvement of instruction in history. They also anticipate that it will contribute to cognitive science. *Effective Teaching And Learning* Routledge Sharing the stories of educators working in a diverse range of international contexts, *Being a Teacher* uses personal narratives to explore effective teaching and learning in global settings. Demonstrating how personal values influence pedagogical practice, and asking how practice can be improved, authors reflect on their experiences not just as teachers, but also as learners, to offer essential guidance for all prospective educational professionals. The book focuses on teacher narratives as a vehicle for consideration of teacher professionalism, and as a way of understanding issues which are important to teachers in different contexts. By

sharing and analysing these narratives, the book discusses the increasing complexity of teaching as a profession, and considers the commonality within the narratives. Each chapter includes graphic representations of analysis and encourages its reader to reflect critically on central questions, thereby constructing their own narrative. *Being a Teacher* provides an in-depth and engaging insight into the education system at a global level, making it an essential read for anyone embarking on a teaching career within the international education market.

Nancy Frey and Douglas Fisher reveal how to create a failsafe assessment system that leads to purposeful lessons, clear indicators of student understanding, and forms of feedback that improve student performance. --from publisher description.
Teaching in a Digital Age Harvard Education Press
University teaching and learning take place within ever more specialized disciplinary settings, each characterized by its

unique traditions, concepts, practices and procedures. It is now widely recognized that support for teaching and learning needs to take this discipline-specificity into account. However, in a world characterized by rapid change, complexity and uncertainty, problems do not present themselves as distinct subjects but increasingly within trans-disciplinary contexts calling for graduate outcomes that go beyond specialized knowledge and skills. This ground-breaking book highlights the important interplay between context-specific and context-transcendent aspects of teaching, learning and assessment. It explores critical questions, such as: What are the 'ways of thinking and practicing' characteristic of particular disciplines? How can students be supported in becoming participants of particular disciplinary discourse communities? Can the diversity in teaching, learning and assessment practices that we observe across departments be attributed exclusively to disciplinary structure? To what extent do the disciplines prepare students for the complexities and

uncertainties that characterize their later professional, civic and personal lives? Written for university teachers, educational developers as well as new and experienced researchers of Higher Education, this highly-anticipated first edition offers innovative perspectives from leading Canadian, US and UK scholars on how academic learning within particular disciplines can help students acquire the skills, abilities and dispositions they need to succeed academically and also post graduation. Carolin Kreber is Professor of Teaching and Learning in Higher Education and the Director of the Centre for Teaching, Learning and Assessment at the University of Edinburgh

Educational Goals, Policies, and Curricula from Six Nations
Routledge

Teacher Learning and Leadership asserts that teachers should be put at the center of creating, developing, organizing, implementing, and sharing their own ideas for school change rather than being passive recipients of knowledge from the outside. It argues that there is tremendous potential for the good of students and

the professionalization of teaching, when teachers work collaboratively to develop their own and their colleagues' professional knowledge and practices and are supported by school and system leaders, unions and government. The book draws on the groundbreaking work of the Teacher Learning and Leadership Program in Ontario and uses an in-depth case study to illustrate its points. It demonstrates how professional development built around collaboration, teacher leadership, curriculum development, technology and pedagogy can be organized in a way that redistributes control and responsibility to teachers, thereby instilling a genuine sense of pride and accomplishment in their work. This book is a sincere outreach from the authors who advocate for the professional development of, by and for teachers as individuals and, importantly, as a collective profession. The authors argue that projects like the TLLP (a joint initiative between the Ontario Ministry of Education and the Ontario Teachers' Federation) can radically, and positively, transform teachers'

knowledge, skills and practices. The book provides an important model for school change led by teachers, rather than experts, in partnership with school and system leaders and is a fascinating read for all those concerned with teaching, teacher development and educational change. *Implications for Access, Equity and Achievement* Royal Society of Chemistry

Teaching and Learning at a Distance is written for introductory distance education courses for preservice or in-service teachers, and for training programs that discuss teaching distant learners or managing distance education systems. This text provides readers with the basic information needed to be knowledgeable distance educators and leaders of distance education programs. The teacher or trainer who uses this book will be able to distinguish between appropriate uses of distance education. In this text we take the following themes: The first theme is the definition of distance education. Before we started writing the first edition of Teaching and Learning at a Distance we carefully

reviewed the literature to determine the definition that would be at the foundation of our writing. This definition is based on the work of Desmond Keegan, but is unique to this book. This definition of distance education has been adopted by the Association for Educational Communications and Technology and by the Encyclopedia Britannica. The second theme of the book was the importance of research to the development of the contents of the book. The best practices presented in Teaching and Learning at a Distance are validated by scientific evidence. Certainly there are “rules of thumb”, but we have always attempted to only include recommendations that can be supported by research. The third theme of Teaching and Learning at a Distance is derived from Richard Clark’s famous quote published in the Review of Educational Research that states that media are mere vehicles that do not directly influence achievement. Clark’s controversial work is discussed in the book, but is also fundamental to the book’s advocacy for distance education – in other words, we authors

did not make the claim that education delivered at a distance was inherently better than other ways people learn. Distance delivered instruction is not a “magical” approach that makes learners achieve more. The fourth theme of the book is equivalency theory. Here we presented the concept that instruction should be provided to learners that is equivalent rather than identical to what might be delivered in a traditional environment. Equivalency theory helps the instructional designer approach the development of instruction for each learner without attempting to duplicate what happens in a face to face classroom. The final theme for Teaching and Learning at a Distance is the idea that the book should be comprehensive – that it should cover as much of the various ways instruction is made available to distant learners as is possible. It should be a single source of information about the field.

Re-envisioning the role,

impact, and goals of teacher education programs, this volume immerses readers in the inner workings of an innovative, field-based teacher preparation program in Chicago. Grounded in sociocultural theory, the book documents how teacher educators, school and community partners, and teacher candidates in the program confront challenges and facilitate their students' learning, development, and achievement. By successfully and collaboratively developing instructional partnerships and embedding programs in urban schools and communities, the contributors demonstrate that it is possible to break the conventional mold of teacher education and better prepare the next generation of teachers.

Teacher Education and Black Communities

Routledge

Designing courses to deliver effective teaching and significant learning is the best way to set students up for success, and this book guides readers through the process. The authors have worked with faculty worldwide, and share the stories of how faculty have transformed courses

from theory to practice. They start with Dee Fink's foundation of integrating course design. Then they provide additional design concepts to expand the course blueprint to implement plans for communication, accessibility, technology integration, as well as the assessment of course design as it fits into the assessment of programs and institutions, and how faculty can use what they learn to meet their professional goals.

Seven Research-Based Principles for Smart Teaching McGraw-Hill Education (UK)

The field of education has been and will continue to be essential to the survival and sustainability of the Black community. Unfortunately, over the past five decades, two major trends have become clearly evident in the Black community: (a) the decline of the academic achievement levels of Black students and (b) the disappearance of Black teachers, particularly Black males. Today, of the 3.5 million teachers in America's classrooms (AACTE, 2010) only 8% are Black teachers, and approximately 2% of these teachers are Black males (NCES, 2010). Over

the past few decades, the Black teaching force in the U.S. has dropped significantly (Lewis, 2006; Lewis, Bonner, Byrd, & James, 2008; Milner & Howard, 2004), and this educational crisis shows no signs of ending in the near future. As the population of Black students in K-12 schools in the U. S. continue to rise—currently over 16% of students in America's schools are Black (NCES, 2010)—there is an urgent need to increase the presence of Black educators. The overall purpose of this edited volume is to stimulate thought and discussion among diverse audiences (e.g., policymakers, practitioners, and educational researchers) who are concerned about the performance of Black students in our nation's schools, and to provide evidence-based strategies to expand our nation's pool of Black teachers. To this end, it is our hope that this book will contribute to the teacher education literature and will inform the teacher education policy and practice debate.

"Teaching and Learning the West Point Way is a

unique compendium of the best teaching and learning practices from one of the most celebrated and storied undergraduate teaching and learning environments and institutions in America—the United States Military Academy at West Point, New York, U.S.A. Drawing on the broad academic curriculum that the students follow at West Point - in addition to military leadership, character development, and competitive athletics - this book describes proven and effective undergraduate pedagogy across a number of academic disciplines. Case studies, strategies and techniques, empirical teaching and learning research results, syllabi, and assignments developed and deployed by West Point faculty are included, which faculty in other higher education institutions can adapt and apply to their own programs and courses. An accompanying companion website provides videos of classroom, laboratory, and fieldwork teaching and learning activities, as well as additional syllabi, course guides, lesson plans, and PowerPoint activity and lecture slides. This is an opportunity to

gain an in-depth insight into the programs and practices inside one of the world's premier leadership development and educational institutions. It should appeal to new and experienced faculty and administrators interested in course creation and syllabus design across a wide range of disciplines in educational institutions and military academies across the globe"--

This book provides an essential overview of

"learning by teaching", unpacking the underpinning theory, research evidence and practical implications of peer learning in a variety of classroom contexts. It aims to offer practical guidance for practitioners in structuring effective peer learning – between professionals and between students alike. It locates this phenomenon in current conceptions of learning and teaching, far removed from traditional ideas of one-way transmission of knowledge. Exactly what happens to promote learning by teaching is explored. Examples of learning by teaching are discussed and it is noted that this happens in school, university and the workplace, as well as through the Internet. Learning by teaching within the student body is then explored, and many different methods described. The organizational features needed to improve learning by teaching consciously and deliberately are investigated. These can be before teaching, during teaching or after teaching. Evidence-based practical guidance is given. Of course teachers can deploy learning by

teaching for themselves, but what if they also organize their students to teach each other, thereby giving many more

opportunities to discuss, practise, explain and question? This takes pedagogical advantage of the differences between students - turning

classrooms into communities of learners where students learn both from their teacher and from their peers.
