"The rhythmic, onomatopoeic text dances across exuberant watercolors with lots of movement.

This celebration of a child's agency in choosing a means of artistic expression strikes just the right note." --Kirkus "A delightful offering for reading aloud, especially during music-themed storytimes."

--School Library Journal From New York Times bestselling author Chris Barton and new illustrator

Louis Thomas comes a fun, rhythmic picture book about finding the music that is perfect for you! A

boy who loves to make noise gets to pick only one instrument (at his parents urging) in a music

store, but there is too much to choose from! There's triangles and sousaphones! There's guitars

and harpsichords! Bagpipes and cellos and trombones! How can he find the one that is just right

for him out of all those options?

Auto Repair For Dummies, 2nd Edition (9781119543619) was previously published as Auto Repair

For Dummies, 2nd Edition (9780764599026). While this version features a new Dummies cover

and design, the content is the same as the prior release and should not be considered a new or

updated product. The top-selling auto repair guide--400,000 copies sold--now extensively

reorganized and updated Forty-eight percent of U.S. households perform at least some automobile

maintenance on their own, with women now accounting for one third of this \$34 billion automotive

do-it-yourself market. For new or would-be do-it-yourself mechanics, this illustrated how-to guide

has long been a must and now it's even better. A complete reorganization now puts relevant repair

and maintenance information directly after each automotive system overview, making it much

easier to find hands-on fix-it instructions. Author Deanna Sclar has updated systems and repair

information throughout, eliminating discussions of carburetors and adding coverage of hybrid and

alternative fuel vehicles. She's also revised schedules for tune-ups and oil changes, included

driving tips that can save on maintenance and repair costs, and added new advice on

troubleshooting problems and determining when to call in a professional mechanic. For anyone who wants to save money on car repairs and maintenance, this book is the place to start. Deanna Sclar (Long Beach, CA), an acclaimed auto repair expert and consumer advocate, has contributed to the Los Angeles Times and has been interviewed on the Today show, NBC Nightly News, and other television programs.

The History of Motorsport Haynes Manuals

The international financial value of Grand Prix racing has grown substantially in recent years. This book will focus upon the massive size, value, importance and impact of the industry. It will also investigate the dominance of UK based Research and Development and design and the development of team strategy and tactics. The authors have based their analysis upon very up-to-date research involving interviews with key individuals at the highest level and visibility within the industry and focus upon the key management themes of teamworking, leadership, strategy and innovation.

The light-duty vehicle fleet is expected to undergo substantial technological changes over the next several decades. New powertrain designs, alternative fuels, advanced materials and significant changes to the vehicle body are being driven by increasingly stringent fuel economy and greenhouse gas emission standards. By the end of the next decade, cars and light-duty trucks will be more fuel efficient, weigh less, emit less air pollutants, have more safety features, and will be more expensive to purchase relative to current vehicles. Though the gasoline-powered spark ignition engine will continue to be the dominant powertrain configuration even through 2030, such vehicles will be equipped with advanced technologies, materials, electronics and controls, and aerodynamics. And by 2030, the deployment of alternative methods to propel and fuel vehicles and alternative modes of transportation, including autonomous vehicles, will be well underway. What are these new technologies - how will they work, and will some technologies be more effective than others? Written to inform The United States Department of Transportation's National Highway Traffic Safety Administration (NHTSA) and Environmental Protection Agency (EPA) Corporate Average Fuel Economy (CAFE) and greenhouse gas (GHG) emission standards, this new report from the National Research Council is a technical evaluation of costs, benefits, and implementation issues of fuel reduction technologies for next-generation light-duty vehicles. Cost, Effectiveness, and Deployment of Fuel Economy Technologies for Light-Duty Vehicles estimates the cost, potential efficiency improvements, and barriers to commercial deployment of technologies that might be employed from 2020 to 2030. This report describes these promising technologies and makes recommendations for their inclusion on the list of technologies applicable for the 2017-2025 CAFE standards.

More than 120 years of motorsport: stories, triumphs and tragedies, sensational innovations, rapid progress, and grandiose dead ends. The History of Motorsport gives a gripping and informative rundown of the colourful world of motor racing, with its trailblazing technical developments and its greatest series and races. The book begins with the first Grand Prix in motor-racing history, and takes readers on a journey through the decades all the way to FIA Formula E. Along the way they will encounter cars like Michael Schumacher's 'red goddess', the Red Bull of Sebastian Vettel, and its Formula 1 forefathers from Alfa Romeo, Ferrari, Lotus, and Brabham, the likes of the Lancia Stratos and Delta Integrale, Audi Sport Quattro, Citroën WRC, and the VW Race Touareg for the Dakar rally. Touring cars through to Mike Rockenfeller's Schaeffler-Audi RS5 also take their place of honour here. The choice of vehicles has been made to ensure all important races and racing series are included. Extensive statistics complete this comprehensive book.
