"For over eighty years, the Association

Henri Capitant has endeavored to spread, update, and promote "continental law," or the law of the European continent. In pursuance of these objectives, the Association has decided to create the "Library of the Association Henri Capitant." The many different groups of the Association have been asked to outline and explain the most salient features of their legal system in a series of books, written in French, structured around a uniform table of contents and within a set limit of pages. Thereby, a reader will be able to know and compare the foundations and fundamental features of each one of these legal systems. With this purpose in mind, *The Legal System of Québec*, like the other books in this collection, presents to the reader the main features of the history of its legal system, its sources of law, its constitutional framework, its legal actors, its criminal law, its law of persons, family law, property law, law of contract, law on delictual liability, quasi-contracts, business entities, and labor-employment law"--

'What is a self and how can a self come out of inanimate matter?' This is the riddle that drove Douglas Hofstadter to write this

extraordinary book. In order to impart his original and personal view on the core mystery of human existence - our intangible sensation of 'I'-ness - Hofstadter defines the playful yet seemingly paradoxical notion of 'strange loop', and explicates this idea using analogies from many disciplines.

«Relevant for children and adults at all stages of communication development, this upper-level text is a must-have for SLPs, educators, and rehabilitation professionals who work with AAC users. The book presents current research and theory and guides readers through four skill areas important to the development of communicative competence: Linguistic competence. Learn about issues such as

the impact of AAC on an individual's natural speech production, the development and use of picture-based communication systems, and the relationship between spoken language and the "language" of AAC systems.

Operational competence. Consider issues related to technical operation of AAC systems, including motor development and control, cognitive factors like awareness and memory, and sensory-perceptual development. Social competence. Explore factors such as the effect of developmental disabilities on social communication, challenges to developing social connections, and the ability to conduct conversations. Strategic competence. Examine operational, linguistic, and social constraints faced by AAC users and learn about adaptive skills that allow users to make the most of what they can do. Two concluding chapters show readers how to improve the communicative competence of AAC users through effective intervention strategies -- and how to ensure that the strategies are working through outcomes measurement. Order this textbook today, and get the in-depth research and theory you need to

enhance communicative competence for individuals who use AAC!»

Suppose you were good with words.

Suppose when you decided to speak, the message you delivered--and the way you delivered it--successfully connected with your intended audience. What would that mean for your career prospects? What would that mean for your comfort level in social situations? And perhaps most importantly, what would that mean for your satisfaction with the personal relationships you value the most? This book is designed to help you find out. Based on an award-winning course and workshop series at the University of Michigan taken by students training to enter a wide range of fields--law, business, medicine, social work, public policy, design, engineering, and many more--it removes the guesswork from figuring out how to communicate clearly and compellingly. All of us have ideas that are worth sharing. Why not learn how to convey yours in a way that people will

appreciate, enjoy, and remember?

Language—that is, oral or written content that references abstract concepts in subtle ways—is what sets us apart as a species, and in an age defined by such content, language has become both the fuel and the currency of our modern information

society. This has posed a vexing new challenge for linguists and engineers working in the field of language-processing: how do we parse and process not just language itself, but language in vast, overwhelming quantities? Modern Computational Models of Semantic Discovery in Natural Language compiles and reviews the most prominent linguistic theories into a single source that serves as an essential reference for future solutions to one of the most important challenges of our age. This comprehensive publication benefits an audience of students and professionals, researchers, and practitioners of linguistics and language

discovery. This book includes a comprehensive range of topics and chapters covering digital media, social interaction in online environments, text and data mining, language processing and translation, and contextual documentation, among others.
