UCC25600 IC is an 8-pin Resonant mode controller having high performance and high efficiency. Boost converters having high voltages and operating under high switching frequency have two serious drawbacks which are core and switching losses. To overcome these losses, converters were designed for controlling the duty cycle and frequency. UCC25600 High-Performance Resonant Mode Controller The UCC25600 is an 8-pin high performance, resonant mode controller specially designed for dc-to-dc applications using resonant topologies, especially the LLC half-bridge resonant converter. This IC provides complete system protection functions including overcurrent, UVLO, bias supply OVP, and over-temperature protection.
