Concise and accurate treatment of the subject matter. Comparative tables to highlight the differences between important terms. Profusely illustrated with examples and well-labelled diagrams. All the chapters contain new material as per the latest syllabus.

Concepts of Biology S. Chand Publishing

Conservation Biology for All provides cutting-edge but basic conservation science to a global readership. A series of authoritative chapters have been written by the top names in

conservation biology with the principal aim of disseminating cutting-edge conservation knowledge as widely as possible. Important topics such as balancing conservation and human needs, climate change, conservation planning, designing and analyzing conservation research, ecosystem services, endangered species management, extinctions, fire, habitat loss, and invasive species are covered. Numerous textboxes describing additional relevant material or case studies are also included. The global biodiversity crisis is now unstoppable; what can be saved in the developing world will require an educated constituency in both the developing and developed world. Habitat loss is particularly acute in developing countries, which is of special concern because it tends to be these locations where the greatest species diversity and richest centres of endemism are to be found. Sadly, developing world conservation scientists have found it difficult to

access an authoritative textbook, which is particularly ironic since it is these countries where the potential benefits of knowledge application are greatest. There is now an urgent need to educate the next generation of scientists in developing countries, so that they are in a better position to protect their natural resources.

Australians have stewardship of a beautiful, diverse and unique environment. We have long had a sense that the biodiversity of this country is special. Yet, despite our sense of its importance, in many parts of our country biodiversity is in trouble. Given the economic, ecological and social importance of biodiversity to our nation, CSIRO has been conducting research into Australia's biodiversity for nearly 90 years. This research has not simply focused on quantifying the challenge, but also on identifying practical solutions for its sustainable management. Biodiversity: Science and Solutions for Australia aims to provide access to the latest scientific knowledge on Australia's biodiversity in an engaging and clear format. The book describes the ancient origins and unique features of Australia's species, as well as the current status of our biodiversity. It outlines tools for management and planning, highlights Indigenous perspectives on biodiversity, and looks at how Australia's biodiversity interacts with agriculture, the resources sector, cities, and with our changing global environment. Importantly, it also shows that biodiversity is in the eye of the beholder: for some it is our life support system, for others it is a resource to be used, for others it is a precious cultural symbol.
