This book describes the nature of public-private partnerships (PPPs) in the health sector in Vietnam. It defines health-related

PPPs, describes their key characteristics, and develops a taxonomy of the different types of PPPs that exist in practice, illustrated by international examples. It also assesses the regulatory and institutional framework for the health PPP program in Vietnam, as well as financing and accountability mechanisms for PPPs at its national and subnational levels. It provides an overview of the PPP project pipeline in Vietnam and analyzes important issues in the health PPPs' design, preparation, and implementation, using eight case studies involving projects in different phases of the project cycle. This book also examines barriers that have hampered the successful design and implementation of health care PPPs in Vietnam. These barriers may be broadly categorized as barriers in the PPP policy and regulatory framework, in the public sector, in the private

sector, and in the financial sector. It proposes feasible and actionable recommendations so that the government can consider tackling the identified barriers and advance the successful design and implementation of health PPPs.

Public-Private Partnerships (PPP or 3Ps) allow the public sector to seek alternative funding and expertise from the private sector during procurement processes. Such partnerships, if executed with due diligence, often benefit the public immensely. Unfortunately, Public-Private Partnerships can be vulnerable to corruption. This book looks at what measures we can put in place to check corruption during procurement and what good governance strategies the public sector can adopt to improve the performance of 3Ps. The book applies mathematical models to analyze 3Ps. It uses game theory to study the interaction and dynamics between the stakeholders and suggests strategies to reduce corruption risks in various 3Ps stages. The authors explain through game theory-based simulation how governments can adopt a evaluating process at the start of each procurement to weed out undesirable

private partners and why the government should take a more proactive approach. Using a methodological framework rooted in mathematical models to illustrate how we can combat institutional corruption, this book is a helpful reference for anyone interested in public policymaking and public infrastructure management.

 Annually, the government commits significant expenditure to a type of public contracts which are known as Public-Private Partnerships (PPPs) or the Private Finance Initiative (PFI). These contracts bind the public purse for decades in sectors such as Health, Defence and Detention, and involve the assignment of a significant role to the private sector in the

provision of public services. This book explores the controversial subject of the public accountability of these contracts, and the corresponding large sums of public money involved. It explains how public accountability works for PPPs and the PFI, and it argues that it should be provided as part of the Economic Constitution. Drawing comparative understandings from the UK and the USA constitutional legal traditions, the book investigates public accountability from the perspective of the Economic Constitution, focusing on three accountability criteria - legal, accounting and administrative. In doing so, it provides an analysis which informs both from the perspective of academic research and from that of legal and consulting practice.
